Memshield 3 panelboards and associated devices

Cross-reference & price guide

Effective 1st November 2011

Powering Business Worldwide

Frequently Asked Questions

Question 1 – When will the new range be available for sale?

Answer – Memshield 3 panelboards will be released for sale in November 2011.

Question 2 – Will the existing range of Series-G MCCBs fit into this new enclosure platform?

Answer – No, the range of Series-G will not fit into the new enclosure platform as the frame size profile is different. There is no forward or backward compatibility between the present and new ranges.

Question 3 – Will the existing range of Series-G MCCB protection devices continue to be available?

Answer – Series-G MCCBs will continue to be produced in the USA and there are no plans in the foreseeable future to discontinue the range. We are forecasting on-going demand to the supply chain management and will carry appropriate stock in the UK.

In order to maximise stock flexibility we will rationalise the range by removing some of the breaking capacity options during 2012 when the range reaches aftermarket status.

Question 4 – Will the existing range of Series-G panelboards and accessories continue to be available?

Answer – Our plan is to cease production of panelboards and associated accessories at the end of this year. At this stage we will carry approximately 2 months' stock profile to cover demand for the 'old' range.

Question 5 – What will be the stock cleanse policy for distributors?

Answer – We will allow stock cleanses of Series-G panelboard range items in line with our standard terms and conditions up to the end of Q1 2012.

During this time we will be working closely with our Distributors to manage the introduction and transition to the new panelboard range.

Question 6 – Why is Eaton changing such a successful range of products?

Answer – The Series-G panelboard range has earned a strong reputation for meeting today's electrical power distribution needs. However, since the launch of the present range some 6 years ago we have been facing some challenges on the specification of the range such as requirements for 4-pole incomers and the time/cost to install L2 Building Regulations compliant metering.

The new panelboard range is intended to address these issues and to use the features and benefits of the new NZM MCCB range, such as fully adjustable trip units on all MCCB frame sizes. This new device platform will also facilitate product innovation in the future.

Question 7 – Will all product variants be available at the launch on 1st November?

Answer – Yes, the full range will be available.

Question 8 – What is the form of separation specification?

Answer – The panelboard as a standard catalogue item can achieve Form 3b Type 2. This is based on the group mounted principal where the "integral housing of the device" is used as means of separation, but to ensure the installation maintains an IP2X / IP XXB rating when smaller cross section cables are used, it is required to fit outgoing MCCB terminal shields to achieve the Form 3b type 2 form of separation

For further information on forms of separation, refer to the BEAMA "Guide to Forms of Separation – Low Voltage Switchgear and Assemblies to BSEN61439-2.

Memshield 3 panelboards and associated devices

This UK Price List also includes a cross reference between the old Series G panelboards/protective devices and the new Memshield 3 panelboards/protective devices.

Prices contained herein supersede and take precedence over all previously published information, effective for all goods purchased within the UK on or after 1st November 2011.

All orders are subject to Terms and Conditions of Sale.

Eaton's Electrical Sector is a global leader in power distribution, power quality, control and automation, and monitoring products. When combined with Eaton's full-scale engineering services, these products provide customer-driven PowerChain Management® solutions to serve the power system needs of the data center, industrial, institutional, public sector, utility, commercial, residential, IT, mission critical, alternative energy and OEM markets worldwide.

PowerChain Management solutions help enterprises achieve sustainable and competitive advantages through proactive management of the power system as a strategic, integrated asset throughout its life cycle, resulting in enhanced safety, greater reliability and energy efficiency. For more information, visit www.eaton.com/electrical.
