

Oil & Gas

An offshore oil rig is shown at sea during a stormy night. The rig is illuminated with lights, and a flare is visible on the left side. The sea is dark with white-capped waves crashing against the rig's legs. The sky is a deep, dark blue.

EATON

Powering Business Worldwide

Protect your investment. Increase your productivity.

Our industry is increasingly operating in a world of extremes. We're exploring and producing at extreme depths, at extreme temperatures, often with extreme pressures – testing the limits of technical capability and engineering stresses. Social and environmental expectations of investors, regulators, media and the public are increasingly demanding – this is a new era of zero tolerance.

Eaton has played a vital role in powering the oil and gas industry for several decades. Today we offer the most robust line of customized electrical, hydraulic and filtration solutions for onshore and offshore exploration and production platforms. Our systems provide the heavy power capabilities needed to operate safely in remote locations and extreme conditions delivering safe, clean and continuous power – and peace of mind.

Flawless execution

Our industry is operating at the limit to keep production at near full capacity in order to meet the growing demand for oil and gas at affordable prices for downstream and retail customers. We must also find and develop new fields and efficiently harness more challenging hydrocarbons. The pressure is on to keep exploration and production costs to a minimum.

Eaton's people, products and processes deliver electrical and hydraulic solutions that reduce risk, cost and downtime. We offer a full range of time and field-tested solutions that provide greater reliability and efficiency, allowing you to achieve consistent operations and lower costs. Most importantly, we can help you maintain the highest level of safety possible – for your people and for the environment.

Protect your people

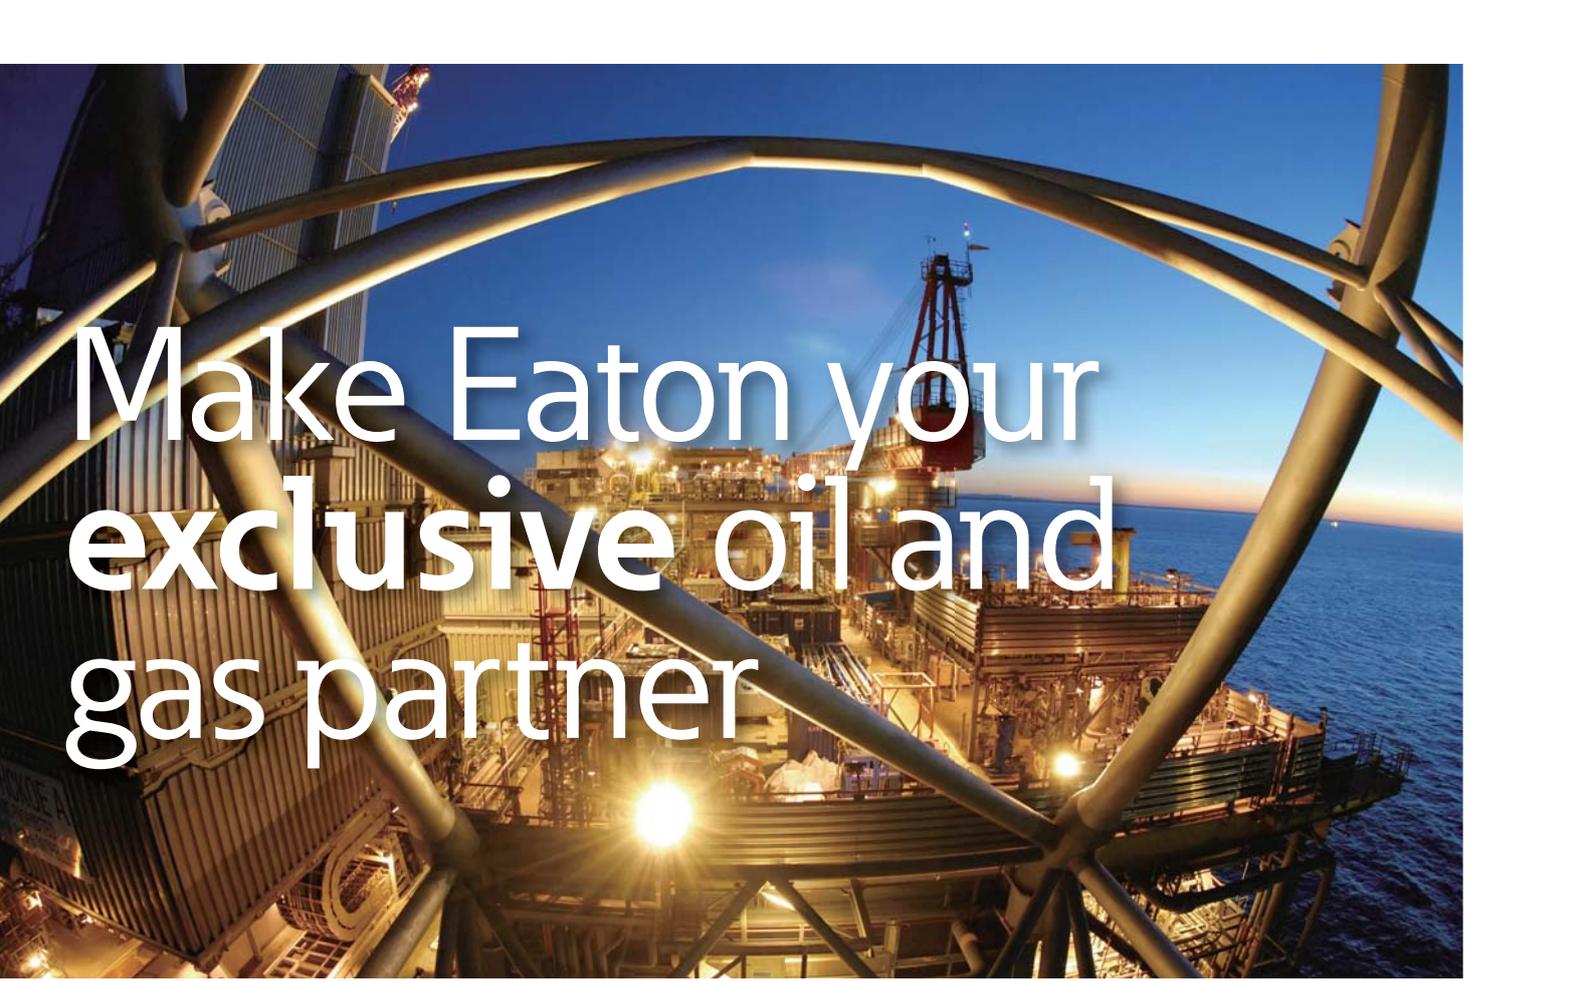

Eaton has the broadest range of solutions for arc flash prevention and control in the industry. In addition, we provide electrical safety training to your employees, helping them to protect themselves and others. Eaton also supplies industry-leading fail-safe brakes as well as a wide range of certified hydraulic products.

Protect your equipment

Eaton is an industry leader in products and solutions with safety-conscious design and installation that does more than just comply with the latest codes and standards. Even in the most demanding physical environments, our products withstand conditions and maximize uptime.

Protect the environment

Today, there is a growing demand for environmentally safe solutions for oil and gas exploration and production. Eaton's breadth of products and services can provide the support and results necessary to minimize your environmental impact.

Make Eaton your exclusive oil and gas partner

Building on a century of experience, Eaton is a global leader with 72,000 employees operating in more than 150 countries. By developing new technologies that combine electrics with hydraulics, we are pioneering smarter power systems that enhance safety, reliability and efficiency and have a lower total cost of ownership.

A leader in reliability, efficiency and safety

Eaton offers the broadest range of products, services, training and hazard assessments that help you manage power more reliably, efficiently and safely.

Unmatched breadth and depth

Eaton has a long-established reputation for providing the most diverse set of products and services spanning electrical, hydraulic and filtration solutions.

Minimizing risk and total cost of ownership

Draw on our experience and insight early in the FEED process to identify the right systems that reduce risk and reduce cost over the project lifecycle of CAPEX, controlled OPEX and risk-related OPEX.
