

Eaton Security Bulletin

ETN-SB-2020-1011: Multiple security vulnerabilities in Wibu-Systems AG Codemeter Runtime

Date	Overall Risk	CVSS v3.0
10/5/2020	Critical	10.0

Overview

Cybersecurity and Infrastructure Security Agency (CISA) has issued an [advisory](#) regarding multiple security vulnerabilities affecting Wibu-Systems AG Codemeter Runtime which is used in multiple products to protect against reverse engineering and to manage the licenses. Popular examples include 3S's Codesys Runtime that relies on CodeMeter Runtime for protecting the codes and managing the licenses. We are currently evaluating the impact of these vulnerabilities to our products and are developing mitigation plans to address them. Further information could be obtained from Wibu-Systems [Security advisory](#).

Impacted Eaton Product(s) & Version(s)

The following Eaton products directly or indirectly utilize the 3S's Codesys Runtime and therefore are impacted by one or more of the reported vulnerabilities -

- XSOFT CODESYS Development System prior to V3.5.16

Note - Eaton will continue to update this list as additional products are evaluated.

Vulnerability Details

The impact of the reported vulnerabilities are varied and include classifications such as Buffer Access with Incorrect Length Value, Inadequate Encryption Strength, Origin Validation Error, Improper Input Validation, Improper Verification of Cryptographic Signature, Improper Resource Shutdown or Release.

For more details on the CVEs, please refer the below link for individual CVEs –

- [CVE-2020-14509](#)
- [CVE-2020-14517](#)
- [CVE-2020-14519](#)
- [CVE-2020-14513](#)
- [CVE-2020-14515](#)
- [CVE-2020-16233](#)

Remediation & Mitigation

Remediation

Eaton is currently analyzing the impact of these reported vulnerabilities to our products and preparing appropriate mitigation plans. Eaton recommends that customers follow cybersecurity best practices to

Eaton Security Bulletin

further protect their devices, as outlined below. Additional information on remediation and mitigation will be released as it becomes available.

Mitigation

- Minimize network exposure for all control system devices and/or systems and ensure that they are not accessible from the Internet.
- Locate control system networks and remote devices behind firewalls and isolate them from business networks.
- When remote access is required, use secure methods, such as Virtual Private Networks (VPNs), recognizing that VPNs may have vulnerabilities and should be updated to the most current version available. Also recognize that VPNs are only as secure as the connected devices.
- Use an internal DNS server that performs DNS-over-HTTPS for lookups.
- Additional mitigation recommendations can be found in [ICS Advisory ICSA-20-203-01](#)

General Security Best Practices

- Restrict exposure to external networks for all control system devices and/or systems and ensure that they are not directly accessible from the open Internet.
- Deploy control system networks and remote devices behind barrier devices (e.g. firewalls, data diodes) and isolate them from business networks.
- Remote access to control system networks should be made available on a strict need-to-use basis. Remote access should use secure methods, such as Virtual Private Networks (VPNs), updated to the most current version available.
- Regularly update/patch software/applications to latest versions available, as applicable.
- Enable audit logs on all devices and applications.
- Disable/deactivate unused communication channels, TCP/UDP ports and services (e.g., SNMP, FTP, BootP, DHCP, etc.) on networked devices.
- Create security zones for devices with common security requirements using barrier devices (e.g. firewalls, data diodes).
- Change default passwords following initial startup. Use complex secure passwords or passphrases.
- Perform regular security assessments and risk analysis of networked control systems.

For more details on cybersecurity best practices and leverage Eaton's Cybersecurity as a Service, please consult the following –

- Eaton offers a suite of cybersecurity assessment and life-cycle management services to help identify vulnerabilities and secure your operational technology network. These services can help you complete the recommended remediation and mitigation actions and strengthen your overall network security. More information about these services are available at www.eaton.com/cybersecurityservices. If you need immediate support, please call +1-800-498-2678 to connect with a representative.
- Cybersecurity Considerations for Electrical Distribution Systems ([WP152002EN](#))
- Cybersecurity Best Practices Checklist Reminder ([WP910003EN](#))

About Eaton:

Eaton is a power management company. We provide energy-efficient solutions that help our customers effectively manage electrical, hydraulic and mechanical power more efficiently, safely and sustainably. Eaton is dedicated to improving the quality of life and the environment through the use of power management technologies and services. Eaton has approximately 100,000 employees and sells products to customers in more than 175 countries.
