Installation and user manual
IMPORTANT SAFETY INSTRUCTIONS

SAVE THESE INSTRUCTIONS. This manual contains important instructions that should be followed during installation and maintenance of the UPS and batteries.

The 5P models that are covered in this manual are intended for installation in an environment within 0 to 40°C, free of conductive contaminant.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Certification Standards

- Radiated emission: FCC CFR 47 part 15 subpart B, Class A.
- Surges withstand ability: IEEE ANSI C62.41 Category A2 (UL Listed).

Special Symbols

The following are examples of symbols used on the UPS or accessories to alert you to important information:

![Risk of Electric Shock](image)

**RISK OF ELECTRIC SHOCK** - Observe the warning associated with the risk of electric shock symbol.

![Important Instructions](image)

Important instructions that must always be followed.

![No UPS or Batteries](image)

Do not discard the UPS or the UPS batteries in the trash. This product contains sealed lead acid batteries and must be disposed as it’s explain in this manual. For more information, contact your local recycling/reuse or hazardous waste center.

![Symbol](image)

This symbol indicates that you should not discard waste electrical or electronic equipment (WEEE) in the trash. For proper disposal, contact your local recycling/reuse or hazardous waste center.

![Information](image)

Information, advice, help.
Safety of Persons

- The system has its own power source (the battery). Consequently, the power outlets may be energized even if the system is disconnected from the AC power source.
- Dangerous voltage levels are present within the system. It should be opened exclusively by qualified service personnel.
- The system must be properly grounded.
- The battery supplied with the system contains small amounts of toxic materials. To avoid accidents, the directives listed below must be observed:
  - servicing of batteries should be performed or supervised by personnel knowledgeable about batteries and the required precautions.
  - when replacing batteries, replace with the same type and number of batteries or battery packs.
  - do not dispose of batteries in a fire. The batteries may explode.
  - batteries constitute a danger (electrical shock, burns). The short-circuit current may be very high.

Precautions must be taken for all handling:
- Wear rubber gloves and boots.
- Do not lay tools or metal parts on top of batteries.
- Disconnect charging source prior to connecting or disconnecting battery terminals.
- Determine if battery is inadvertently grounded. If inadvertently grounded, remove source from ground. Contact with any part of a grounded battery can result in electrical shock. The likelihood of such shock can be reduced if such grounds are removed during installation and maintenance (applicable to equipment and remote battery supplies not having a grounded supply circuit).

Product Safety

- The UPS connection instructions and operation described in the manual must be followed in the indicated order.
- A protection circuit breaker must be installed upstream and be easily accessible. The system can be disconnected from the AC power source by opening this circuit breaker.
- Check that the indications on the rating plate correspond to your AC powered system and to the actual electrical consumption of all the equipment to be connected to the system.
- For PLUGGABLE EQUIPMENT, the socket-outlet shall be installed near the equipment and shall be easily accessible
- Never install the system near liquids or in an excessively damp environment.
- Never let a foreign body penetrate inside the system.
- Never block the ventilation grates of the system.
- Never expose the system to direct sunlight or source of heat.
- If the system must be stored prior to installation, storage must be in a dry place.
- The admissible storage temperature range is -15 °C to +50 °C.

Special Precautions

- All handling operations will require at least two people (unpacking, installation in rack system).
- Before and after the installation, if the UPS remains de-energized for a long period, the UPS must be energized for a period of 24 hours, at least once every 6 months (for a normal storage temperature less than 25 °C). This charges the battery, thus avoiding possible irreversible damage.
- During the replacement of the Battery Module, it is imperative to use the same type and number of element as the original Battery Module provided with the UPS to maintain an identical level of performance and safety. In case of doubt, don't hesitate to contact your EATON representative.
1. Introduction

Thank you for selecting an EATON product to protect your electrical equipment.

The 5P range has been designed with the utmost care. We recommend that you take the time to read this manual to take full advantage of the many features of your UPS (Uninterruptible Power System).

Before installing your 5P, please read the booklet presenting the safety instructions. Then follow the indications in this manual.

To discover the entire range of EATON products and the options available for the 5P range, we invite you to visit our web site at www.eaton.com/powerquality or contact your EATON representative.

1.1 Environmental protection

EATON has implemented an environmental-protection policy. Products are developed according to an eco-design approach.

Substances

This product does not contain CFCs, HCFCs or asbestos.

Packing

To improve waste treatment and facilitate recycling, separate the various packing components.
- The cardboard we use comprises over 50% of recycled cardboard.
- Sacks and bags are made of polyethylene.
- Packing materials are recyclable and bear the appropriate identification symbol  

<table>
<thead>
<tr>
<th>Materials</th>
<th>Abbreviations</th>
<th>Number in the symbols</th>

</tbody>
</table>

Follow all local regulations for the disposal of packing materials.

End of life

EATON will process products at the end of their service life in compliance with local regulations. EATON works with companies in charge of collecting and eliminating our products at the end of their service life.

Product

The product is made up of recyclable materials. Dismantling and destruction must take place in compliance with all local regulations concerning waste. At the end of its service life, the product must be transported to a processing center for electrical and electronic waste.

Battery

The product contains lead-acid batteries that must be processed according to applicable local regulations concerning batteries. The battery may be removed to comply with regulations and in view of correct disposal.

3. Installation

3.1 Unpacking and contents check

- 14 5P
- 15 Front panel parts
- 16 RS232 communication cable
- 17 USB communication cable
- 18 Software CD-ROM
- 19 Manual CD-ROM
- 20 Safety instructions
- 21 Quick start
- 22 Mounting kit for 19-inch bays (RT only)
- 23 2 supports for the upright position
- 24 NMC communication card (optional)

Packing materials must be disposed of in compliance with all local regulations concerning waste. Recycling symbols are printed on the packing materials to facilitate sorting.
3. Installation

3.2 Battery module connection

Caution: Before starting the UPS, please connect the internal battery.

Note: A small amount of arcing may occur when connecting the batteries. This is normal and does not damage the UPS or present any safety concern.

A Connect the battery module (never pull on the wires).

B Attach the left-hand side of the front panel by sliding it then by locking the push button.

C Attach the center panel.
3.3 Tower installation

3.4 Rack installation (RT only)

Follow steps 1 to 4 for module mounting on the rails.

The rails and necessary hardware are supplied by EATON.
3. Installation

3.5 Communication ports

Connection of RS232 or USB communication port (optional)

The RS232 and USB communication ports cannot operate simultaneously.

1. Connect the RS232 or USB communication cable to the serial or USB port on the computer equipment.
2. Connect the other end of the communication cable to the USB or RS232 communication port on the UPS.

The UPS can now communicate with EATON power management software.

Installation of the communication cards (optional, standard on the Netpack versions)

It is not necessary to shutdown the UPS before installing a communication card.

1. Remove the slot cover secured by screws.
2. Insert the communication card in the slot.
3. Secure the card cover with the 2 screws.

Characteristics of the contact communication port (optional)

- Pins 1, 3, 4, 5, 6, 10: not used
- Pin 2: common (user)
- Pin 7: low battery
- Pin 8: operation on battery power
- Pin 9: UPS ON, equipment supplied

n.o.: normally open contact

When a signal is activated, the contact is closed between the common (pin 2) and the pin for the corresponding signal.

Contact characteristics (optocoupler)
- Voltage: 48 V DC max
- Current: 25 mA max
- Power: 1.2 W
3. Installation

3.6 Connection with a FlexPDU (Power Distribution Unit) module (optional)

1. Connect the UPS powercord to the AC-power source.
2. Connect the input cord of the FlexPDU module to one of the UPS outlets. The cable and the connectors are marked in red.
3. Connect the equipment to the outlets and on the FlexPDU module. These outlets differ, depending on the version of the FlexPDU module.

3.7 Connection with a HotSwap MBP module (optional)

The HotSwap MBP module makes it possible to service or even replace the UPS without affecting the connected loads (HotSwap function).

1. Connect the input socket on the HotSwap MBP module to the AC-power source.
2. Connect the UPS input socket to the “UPS Input” of the HotSwap MBP module. This cord and the receptacle are marked blue.
3. Connect the UPS outlet to the “UPS Output” of the HotSwap MBP module. This cord and the outlet are marked red.
4. Connect the equipment to the outlets on the HotSwap MBP module. These outlets differ, depending on the version of the HotSwap MBP module.

Caution: Do not use UPS outlets and to supply equipment because use of switch on the HotSwap MBP module would cut supply to the equipment.
3. Installation

**HotSwap MBP module operation**

The HotSwap MBP module has a rotary switch 31 with two positions:
- **Normal**: the load is supplied by the UPS, LED 29 is on.
- **Bypass**: the load is supplied directly by the AC-power source. LED 30 is on.

**UPS start-up with the HotSwap MBP module**

1. Check that the UPS is correctly connected to the HotSwap MBP module.
2. Set switch 31 to Normal position.
3. Start the UPS by pressing the ON/OFF button on the UPS control panel.
   - The load is supplied by the UPS.
   - LED 29 “UPS ON - OK to switch” on the HotSwap MBP module goes ON.

**HotSwap MBP module test**

1. Set switch 31 to Bypass position and check that the load is still supplied.
2. Set switch 31 back to Normal position.

### 3.8 UPS connection without a FlexPDU or HotSwap MBP module

Check that the indications on the name plate located on the back of the UPS correspond to the AC-power source and the true electrical consumption of the total load.

1. **5P**: connect the UPS input plug 10 to the AC-power source.

2. Connect the loads to the UPS. It is preferable to connect the critical loads to the ‘Primary’ outlet group shown as 9 and the non-critical loads to either the Group 1 or Group 2 outlets shown as 8. Group 1 and Group 2 outlets can be programmed to shed loads as desired. For the 5P 3000 models, connect any high-power device to the 30 A outlet 7.

3. To program shutdown of outlets 8 during operation on battery power to optimize the available backup time, please check the in/out settings.

**Note:** The UPS charges the battery as soon as it is connected to the AC-power source, even if button is not pressed.

Once the UPS is connected to the AC-power source, eight hours of charging is required before the battery can supply the rated backup time.
4. Operation

4.1 Start-up and Normal operation

To start the UPS:

1. Verify that the UPS power cord is plugged in.
2. The UPS front panel display illuminates and shows EATON logo.
3. Verify that the UPS status screen shows \( \text{UPS On Battery} \), press \( \text{UPS Start} \) to start.
4. Press the \( \text{UPS Start} \) button on the UPS front panel for at least 2 seconds.
   The UPS front panel display changes status to “UPS starting...”.
5. Check the UPS front panel display for active alarms or notices. Resolve any active alarms before continuing. See “Troubleshooting” on page 21.
   If the \( \text{UPS On Battery} \) indicator is on, do not proceed until all alarms are clear. Check the UPS status from the front panel to view the active alarms. Correct the alarms and restart if necessary.
6. Verify that the \( \text{UPS Normal} \) indicator illuminates solid, indicating that the UPS is operating normally and any loads are powered and protected.
   The UPS should be in Normal mode.

4.2 Starting the UPS on Battery

Before using this feature, the UPS must have been powered by utility power with output enabled at least once.
Battery start can be disabled. See the “Cold start” setting in “ON/OFF Settings” on page 12.

To start the UPS on battery:

1. Press the \( \text{UPS Start} \) button on the UPS front panel until the UPS front panel display illuminates and shows a status of “UPS starting...”.
   The UPS cycles through Standby mode to Battery mode. The \( \text{UPS On Battery} \) indicator illuminates solid.
   The UPS supplies power to your equipment.
2. Check the UPS front panel display for active alarms or notices besides the “Battery mode” notice and notices that indicate missing utility power. Resolve any active alarms before continuing.
   See “Troubleshooting” on page 21.
   Check the UPS status from the front panel to view the active alarms. Correct the alarms and restart if necessary.

4.3 UPS Shutdown

To shut down the UPS:

Press the \( \text{UPS Stop} \) button on the front panel for three seconds.
The UPS starts to beep and shows a status of “UPS shutting OFF...”. The UPS then transfers to Standby mode, and the \( \text{UPS On Battery} \) indicator turns off.

4.4 Operation on Battery Power

Transfer to battery power

- The connected devices continue to be supplied by the UPS when AC input power is no longer available. The necessary energy is provided by the battery.
- The \( \text{UPS Normal} \) and \( \text{UPS On Battery} \) indicator illuminates solid.
- The audio alarm beeps every ten seconds.

The connected devices are supplied by the battery.
4. Operation

Low-battery warning

- The ~ and ⚡ indicator illuminates solid.
- The audio alarm beeps every three seconds.

The remaining battery power is low. Shut down all applications on the connected equipment because automatic UPS shutdown is imminent.

End of battery backup time

- LCD displays "End of backup time".
- All the LEDs go OFF.
- The audio alarms stops.

4.5 Return of AC Input Power

Following an outage, the UPS restarts automatically when AC input power returns (unless the restart function has been disabled) and the load is supplied again.

4.6 UPS remote control functions

5P offers a choice between two remote control functions.

- **RPO**: Remote Power Off allow a remote contact to be used to disconnect all the equipment connected to the UPS. Restarting the UPS requires manual intervention.
- **ROO**: Remote ON/OFF allows remote action of button ▼ to shut down the UPS.

These functions are obtained by opening a contact connected between the appropriate pins of connector 5 on the rear panel of the UPS (see figures below).

Remote control connection and test

1. Check that the UPS is OFF and disconnected from the AC input source.
2. Remove connector 5.
3. Connect a normally closed volt-free contact (60 V DC / 30 V AC max., 20 mA max., 0.75 mm² (18 AWG) cable cross-section) between the two pins of connector 5 (see diagram).

   - **ROO**
     - Contact open: UPS shutdown
     - Contact closed: UPS start-up (UPS connected to AC power and AC power is available)
     - **Note**: The local ON/OFF control using button ▼ overrides the remote-control function.

   - **RPO**
     - Contact open: UPS shutdown, LED ▲ goes ON.
     - To return to normal operation, deactivate the remote external contact and restart the UPS by pressing button ▼.

4. Plug connector 5 into the back of the UPS.
5. Connect and restart the UPS following the previously described procedures.
6. Activate the external remote shutdown contact to test the function.

**Warning**: This connector must only be connected to SELV (Safety Extra-Low Voltage) circuits.

| 1          | ● The protected devices are connected to the UPS output instead of to the HotSwap MBP module.  
            | ● The AC-power cord is connected to the UPS input instead of to the HotSwap MBP module.         | Check the wiring between the UPS and the HotSwap MBP module (see section 3.7). |
| 2          | ● The UPS is shut down.  
            | ● The wiring between the UPS and the HotSwap MBP module is incorrect.                        | Start the UPS.  
            | ● Check the wiring between the UPS and the HotSwap MBP module (see section 3.7).         |
| 3          | ● The rotary switch on the HotSwap MBP module is set to Bypass position.  
            | ● The wiring between the UPS and the HotSwap MBP module is incorrect.                        | Set the rotary switch on the HotSwap MBP module to Normal position.   
            | ● Check the wiring between the UPS and the HotSwap MBP module (see section 3.7).         |
5. Maintenance

5.2 Battery-module replacement

Safety recommendations

The battery can cause electrocution and high short-circuit currents. The following safety precautions are required before servicing the battery components:
- remove watches, rings, bracelets and all other metal objects from the hands and arms,
- use tools with an insulated handle.

Battery-module removal

- Remove the middle panel.
- Remove the left-hand side of the front panel by pushing the button and then by sliding the part.
- Disconnect the battery-module by separating the town connectors (never pull on the wires).
- Remove the metal protection cover in front of the battery (two screws).
- Pull the plastic tab to remove the battery block and replace it.
Mounting the new battery module

Carry out the above instructions in reverse order.

- To ensure safety and high performance, use only batteries supplied by EATON.
- Take care to firmly press together the two parts of the connector during remounting.

5.3 Maintenance on a UPS equipped with the HotSwap MBP module

The HotSwap MBP module makes it possible to service or even replace the UPS without affecting the connected loads (HotSwap function).

**Maintenance**

1. Set switch 31 to Bypass position. The red LED on the HotSwap MBP module goes ON, indicating that the load is supplied directly with AC input source power.
2. Stop the UPS by pressing the button on the UPS control panel. LED 29 "UPS ON - OK to switch" goes OFF; the UPS can now be disconnected and replaced.

**Return to normal operation**

1. Check that the UPS is correctly connected to the HotSwap MBP module.
2. Start the UPS by pressing the button on the UPS control panel. LED 29 "UPS ON - OK to switch" on the HotSwap MBP module goes ON (otherwise, there is a connection error between the HotSwap MBP module and the UPS).
3. Set switch 31 to Normal position. The red LED on the HotSwap MBP module goes OFF.

(1) The high and low thresholds can be adjusted using UPS settings.
(2) Up to 40 Hz in low-sensitivity mode (programmable using UPS settings).
(3) Adjustable to 100 V.

For Models 5P 3000, 5P 3000 RT - “CAUTION - To reduce the risk of fire, connect only to a circuit provided with 30 amperes maximum branch circuit overcurrent protection in accordance with the National Electric Code, ANSI/NFPA 70”.

For Models 5P 2200, 5P 2200 RT, 5P 1500 RT - “CAUTION - To reduce the risk of fire, connect only to a circuit provided with 20 amperes maximum branch circuit overcurrent protection in accordance with the National Electric Code, ANSI/NFPA 70”.

This product is designed for IT power distribution system.
6.2 Glossary

<table>
<thead>
<tr>
<th>Term</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Backup time</strong></td>
<td>Time during which the load can be supplied by the UPS operating on battery power.</td>
</tr>
<tr>
<td><strong>Battery test</strong></td>
<td>Internal UPS test to check battery status.</td>
</tr>
<tr>
<td><strong>Cold start</strong></td>
<td>The devices connected to the UPS can be started even if AC input power is not available. The UPS operates on battery power alone.</td>
</tr>
<tr>
<td><strong>Deep discharge</strong></td>
<td>Battery discharge beyond the permissible limit, resulting in irreversible damage to the battery.</td>
</tr>
<tr>
<td><strong>FlexPDU</strong></td>
<td>Module with UPS outlets for installation in a bay. There are different modules with different types of outlets.</td>
</tr>
<tr>
<td><strong>HotSwap MBP</strong></td>
<td>UPS manual-bypass module for maintenance. There are different modules with different types of outlets.</td>
</tr>
<tr>
<td><strong>Load</strong></td>
<td>Devices or equipment connected to the UPS output.</td>
</tr>
<tr>
<td><strong>Low-battery warning</strong></td>
<td>This is a battery-voltage level indicating that battery power is low and that the user must take action in light of the imminent break in the supply of power to the load.</td>
</tr>
<tr>
<td><strong>Programmable outlets</strong></td>
<td>Controllable outlets for automatic load shedding, remote shutdown and sequential restart (personalised using software).</td>
</tr>
<tr>
<td><strong>UPS</strong></td>
<td>Uninterruptible Power System.</td>
