### Class A EMC Statements

**FCC Part 15**

**NOTE**
This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

**ICES-003**

This Class A Interference Causing Equipment meets all requirements of the Canadian Interference Causing Equipment Regulations ICES 003.

Cet appareil numérique de la classe A respect et outes les exigences du Reglement sur le matériel brouilleur du Canada.

**IEC 62040-2**

Some configurations are classified under IEC 62040-2 as “C2 UPS for Unrestricted Sales Distribution.”

**VCCI Notice**

この装置は、情報処理装置等電波障害自主規制協議会（VCCI）の基準に基づくクラスA情報技術装置です。この装置を家庭環境で使用すると電波妨害を引き起こすことがあります。この場合には使用者が適切な対策を講ずるよう要求されることがあります。
Special Symbols

The following are examples of symbols used on the product to alert you to important information:

**RISK OF ELECTRIC SHOCK** - Observe the warning associated with the risk of electric shock symbol.

**CAUTION: REFER TO OPERATOR'S MANUAL** - Refer to your operator's manual for additional information, such as important operating and maintenance instructions.

This symbol indicates that you should not discard the product in the trash. This product must be disposed of properly. For more information, contact your local recycling/reuse or hazardous waste center.

This symbol indicates that you should not discard waste electrical or electronic equipment (WEEE) in the trash. For proper disposal, contact your local recycling/reuse or hazardous waste center.

**ON** - Indicates that the switch is in the ON position.

**OFF** - Indicates that the switch is in the OFF position.

**PHASE** - The word “phase.”

---

**IMPORTANT**

To ensure you have the most up-to-date content and information for this product, please review the latest manual revision on our website, [www.eaton.com/9155](http://www.eaton.com/9155).

Chapter 1 Introduction

A parallel system with up to three uninterruptible power supplies (UPSs) can be installed to provide a parallel capacity and/or redundant system. This load sharing system provides more capacity than a single UPS and can provide backup, depending on the load and configuration. In addition, when one UPS is taken out of service for maintenance or is not operating properly, a redundant UPS continues to supply uninterrupted power to the critical load. A parallel Eaton® Powerware Hot Sync® Controller Area Network (CAN) Bridge Card provides connectivity for system metering and operational mode control. The parallel system consists of two or three UPSs, each with a CAN Bridge Card and a parallel tie cabinet.

Figure 1 shows the Eaton 9155 UPS and an optional Extended Battery Module (EBM).

Figure 1. The Eaton 9155 UPS and EBM (2-High Cabinets Shown)

Providing outstanding performance and reliability, the Eaton 9155’s unique benefits including the following:

- Online UPS design with pure sine wave output. The UPS filters and regulates incoming AC power and provides consistent power to your equipment without draining the battery.
- More wattage in less space with a 0.9 power factor—protecting more equipment and leaving more room for expansion.
- Support for Powerware Hot Sync® paralleling of multiple modules for redundancy or extra capacity.
- Input current total harmonic distortion (THD) of less than five percent, using active input power factor correction.
- ABM® technology that uses advanced battery management to increase battery service life, optimize recharge time, and provide a warning before the end of useful battery life.
- Start-on-battery capability for powering up the UPS even if utility power is not available.
- Up to four hours of extended runtime with added EBMs.
The following options for the Eaton 9155 are available:

1.1 Options and Accessories

1.1.1 Parallel Tie Cabinet
The parallel tie cabinet is used to connect up to three UPSs providing parallel capacity and/or redundant system. This load sharing system provides more capacity than a single UPS and can provide backup, depending on the load and configuration. In addition, when one UPS is taken out of service for maintenance or is not operating properly, a redundant UPS continues to supply uninterrupted power to the critical load. A parallel Powerware Hot Sync Controller Area Network (CAN) Bridge Card provides connectivity for system metering and operational mode control. The parallel system consists of two to three UPSs, each with a parallel CAN Bridge Card, and a parallel tie cabinet.

1.1.2 Maintenance Bypass Module (MBM)
The optional MBM is installed on the UPS rear panel and is used to bypass the UPS during maintenance or servicing. The maintenance bypass switch on the MBM provides a Make-Before-Break (MBB) wrap-around bypass for UPS service without shutting down the load.

1.1.3 Power Distribution Module (PDM)
The optional PDM provides the same functionality as the MBM and also comes equipped with several different types of output receptacles.

1.1.4 Bypass Power Module
The Eaton Bypass Power Module (BPM) is designed to be a maintenance bypass switch that also contains flexible output power distribution and mounting options.

The BPM provides added reliability to Eaton uninterruptable power supply (UPS) systems by ensuring seamless, uninterrupted, no-break transfer as well as a lock-out/tag-out (LOTO) feature to ensure the greatest safety for UPS technicians and electricians. The BPM also offers output distribution in order to simplify wiring in a rackmount IT environment, potentially removing the need for a panelboard, breakers, and conduit for distribution.

1.1.5 Input Isolation Transformer
The optional input isolation transformer is located at the bottom of a 3-high UPS model. The input isolation transformer provides a neutral from a 208V or 240V input source with 240V output and can be wired to the UPS or to an MBM/PDM.

1.1.6 Seismic Kit
The optional seismic kit secures the UPS and optional EBMs for Zone 4 seismic installations.
1.2 Using This Manual

This manual describes how to install and operate the Eaton 9155 UPS. Read and understand the procedures described in this manual to ensure trouble-free installation and operation. In particular, be thoroughly familiar with the REPO procedure or the LOAD OFF procedure, see Chapter 5 UPS Operating Instructions.

The information in this manual is divided into sections and chapters. The system, options, and accessories being installed dictate which parts of this manual should be read. At a minimum, Chapter 1 Introduction through Chapter 4 Parallel UPS System Installation and Chapter 5 UPS Operating Instructions should be examined.

Read through each procedure before beginning the work. Perform only those procedures that apply to the UPS system being installed or operated.

1.3 Conventions Used in This Manual

This manual uses these type conventions:

- **Bold type** highlights important concepts in discussions, key terms in procedures, and menu options, or represents a command or option that you type or enter at a prompt.
- **Italic type** highlights notes and new terms where they are defined.
- **Screen type** represents information that appears on the screen or LCD.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="note.png" alt="Note" /></td>
<td>Information notes call attention to important features or instructions.</td>
</tr>
<tr>
<td><img src="keys.png" alt="Keys" /></td>
<td>Brackets are used when referring to a specific key, such as [Enter] or [Ctrl].</td>
</tr>
</tbody>
</table>

In this manual, the term UPS refers only to the UPS cabinet and its internal elements. The term UPS system refers to the entire power protection system – the UPS cabinet, an external battery system, and options or accessories installed.

The term line-up-and-match refers to accessory cabinets that are physically located adjacent to the UPS. The term standalone refers to accessory cabinets that are located separate from the UPS.

Left and right side notations are referenced standing in front of the cabinet.

1.4 For More Information

Refer to the Eaton 9155 UPS 8-15 kVA User’s Guide for the following additional information:

- Installation instructions, including site preparation, planning for installation, wiring and safety information, and detailed illustrations of cabinets with dimensional and connection point drawings
- Operation, including breakers, standard features and optional accessories, procedures for using the bypass functions, and information about maintenance

Refer to the Eaton Bypass Power Module (BPM) User’s Guide for the following additional information:

- Installation instructions, wiring and safety information, and detailed illustrations with dimensional and connection point drawings
- Operation, standard features and information about maintenance

Refer to the Eaton Remote Monitoring Device (RMD) Installation and Operation Manual for additional installation and operating instructions.

- Visit [www.eaton.com/powerquality](http://www.eaton.com/powerquality) or contact an Eaton service representative for information on how to obtain copies of these manuals.
1.5 Getting Help

If help is needed with any of the following:

• Scheduling initial startup
• Regional locations and telephone numbers
• A question about any of the information in this manual
• A question this manual does not answer

Please call the Customer Reliability Center at:

United States: 1-800-843-9433
Canada: 1-800-461-9166 ext 260
All other countries: Call your local service representative

Please have the following information ready when you call for service:

• Model number
• Serial number
• Firmware version number
• Date of failure or problem
• Symptoms of failure or problem
• Customer return address and contact information

Please use the following e-mail address for manual comments, suggestions, or to report an error in this manual:

E-ESSDocumentation@eaton.com

1.6 Equipment Registration

Please visit www.eaton.com/pq/register to register your new Eaton UPS / Eaton UPS Accessory.

Model Number: 
Serial Number: 
Chapter 2  Safety Warnings

IMPORTANT SAFETY INSTRUCTIONS SAVE THESE INSTRUCTIONS

This manual contains important instructions that you should follow during installation and maintenance of the UPS and batteries. Please read all instructions before operating the equipment and save this manual for future reference.

⚠️ DANGER

This UPS contains LETHAL VOLTAGES. All repairs and service should be performed by AUTHORIZED SERVICE PERSONNEL ONLY. There are NO USER SERVICEABLE PARTS inside the UPS.

⚠️ WARNING

- This UPS contains its own energy source (batteries). The UPS output may carry live voltage even when the UPS is not connected to an AC supply.
- To reduce the risk of fire or electric shock, install this UPS in a temperature and humidity controlled, indoor environment, free of conductive contaminants. Ambient temperature must not exceed 40°C (104°F). Do not operate near water or excessive humidity (95% maximum).
- To reduce the risk of fire, connect only to a circuit provided with 100 amperes maximum branch circuit overcurrent protection in accordance with the National Electrical Code® (NEC®), ANSI/NFPA 70.
- Output overcurrent protection and disconnect switch must be provided by others.

📌 CAUTION

- Batteries can present a risk of electrical shock or burn from high short circuit current. Observe proper precautions. Servicing should be performed by qualified service personnel knowledgeable of batteries and required precautions. Keep unauthorized personnel away from batteries.
- Proper disposal of batteries is required. Refer to your local codes for disposal requirements.
- Never dispose of batteries in a fire. Batteries may explode when exposed to flame.
2.1 Consignes de Sécurité

2.1.1 CONSIGNES DE SÉCURITÉ IMPORTANTES CONSERVER CES INSTRUCTIONS

⚠ IMPORTANT

Ce manuel comporte des instructions importantes que vous êtes invité à suivre lors de toute procédure d’installation et de maintenance des batteries et de l’onduleur. Veuillez consulter entièrement ces instructions avant de faire fonctionner l’équipement et conserver ce manuel afin de pouvoir vous y reporter ultérieurement.

⚠ DANGER!

Cet onduleur contient des TENSIONS MORTELLES. Toute opération d’entretien et de réparation doit être EXCLUSIVEMENT CONFIÉE À UN PERSONNEL QUALIFIÉ AGREE. AUCUNE PIÈCE RÉPARABLE PAR L’UTILISATEUR ne se trouve dans l’onduleur.

⚠ AVERTISSEMENT!

• Cet onduleur renferme sa propre source d’énergie (batteries). Les prises de sortie peuvent être sous tension même lorsque l’onduleur n’est pas branché sur le secteur.

• Pour réduire les risques d’incendie et de décharge électrique, installer l’onduleur uniquement à l’intérieur, dans un lieu dépourvu de matériaux conducteurs, où la température et l’humidité ambiantes sont contrôlées. La température ambiante ne doit pas dépasser 40 °C. Ne pas utiliser à proximité d’eau ou dans une atmosphere excessivement humide (95 % maximum).

• La protection contre une surintensité pour le(s) circuit(s) de sortie de courant alternatif doit être fournie par un autre fournisseur.

• Les interrupteurs de déconnexion convenables pour le(s) circuit(s) de sortie de courant alternatif doivent être fournie par un autre fournisseur.

⚠ ATTENTION!

• Les batteries peuvent présenter un risque de décharge électrique ou de brûlure par des courts-circuits de haute intensité. Prendre les précautions nécessaires.

• Une mise au rebut réglementaire des batteries est obligatoire. Consulter les réglements en vigueur dans votre localité.

• Ne jamais jeter les batteries au feu. L’exposition aux flammes risque de les faire exploser.
2.2 Advertencias de Seguridad

2.2.1 INSTRUCCIONES DE SEGURIDAD IMPORTANTES GUARDE ESTAS INSTRUCCIONES

**IMPORTANT**

Este manual contiene instrucciones importantes que debe seguir durante la instalación y el mantenimiento del SIE y de las baterías. Por favor, lea todas las instrucciones antes de poner en funcionamiento el equipo y guarde este manual para referencia en el futuro.

**PELIGRO**

Este SIE contiene VOLTAJES MORTALES. Todas las reparaciones y el servicio técnico deben ser efectuados SOLAMENTE POR PERSONAL DE SERVICIO TÉCNICO AUTORIZADO. No hay NINGUNA PARTE QUE EL USUARIO PUEDA REPARAR dentro del SIE.

**WARNING**

- Este SIE contiene su propia fuente de energía (las baterías). Los receptáculos de salida pueden transmitir corriente eléctrica aun cuando el SIE no esté conectado a un suministro de corriente alterna (c.a.).
- Para reducir el riesgo de incendio o de choque eléctrico, instale este SIE en un lugar cubierto, con temperatura y humedad controladas, libre de contaminantes conductores. La temperatura ambiente no debe exceder los 40°C. No trabaje cerca del agua o con humedad excesiva (95% máximo).
- La protección contra exceso de corriente para el/los circuito(s) de CA de salida será suministrada por terceros.
- Los interruptores de desconexión debidamente clasificados para el/los circuito(s) de CA de salida serán suministrados por terceros.

**PRECAUCIÓN**

- Las baterías pueden presentar un riesgo de descargas eléctricas o de quemaduras debido a la alta corriente de cortocircuito. Preste atención a las instrucciones correspondientes.
- Es necesario desechar las baterías de un modo adecuado. Consulte las normas locales para conocer los requisitos pertinentes.
- Nunca deseche las baterías en el fuego. Las baterías pueden explotar si se las expone a la llama.
Safety Warnings
Chapter 3 UPS Installation Plan and Unpacking

Use the following basic sequence of steps to install the UPS:

1. Create an installation plan for the UPS system.
2. Prepare your site for the UPS system.
3. Inspect and unpack the UPS cabinet.
4. Unload and install the UPS cabinet, and wire the system.
5. Complete the Installation Checklist.
6. Have authorized service personnel perform preliminary operational checks and start up the system.

The instructions are intended for the chief operator/system supervisor, electrical consultants, and installation electricians. Local regulations and electrical code must be followed during the UPS installation.

3.1 Creating an Installation Plan

Before installing the UPS system, read and understand how this manual applies to the system being installed. Use this chapter’s procedures and illustrations and those in Chapter 4 UPS System Installation to create a logical plan for installing the system.

3.2 Preparing the Site

For the UPS system to operate at peak efficiency, the installation site should meet the environmental parameters outlined in this manual. The operating environment must meet the weight, clearance, and environmental requirements specified.

3.2.1 Environmental and Installation Considerations

The UPS system installation must meet the following guidelines:

- The system must be installed on a level floor suitable for computer or electronic equipment.
- The system must be operated at an altitude no higher than 1500m (5000 ft) without derating. For additional assistance with high altitude operation, contact an Eaton service representative (see paragraph 1.5 Getting Help).
- The system must be installed in a temperature and humidity controlled indoor area free of conductive contaminants.

CAUTION

Do not expose the UPS to overly aggressive environments, like salt mist or corrosive gases. High relative humidity accelerates the effects of contaminants. The UPS should be installed in a G1 environment (based on ANSI/ISA S-71.04 classifications). If the UPS is used in a more aggressive environment, it can cause reduced product life and possibly early failure. If the installation location does not meet the recommended environment, contact Eaton service representative for further information (see paragraph 1.5 Getting Help).

- The environmental requirements specified below are for the air at the intake ports of the 9155 UPS, and are the maximum, not to exceed, ratings.
  - There shall be at least a 1.8°F (1.0°C) difference between the dry bulb temperature and the wet bulb temperature, at all times, to maintain a non-condensing environment.
  - The maximum rate of temperature change shall be limited to 3°F over 5 minutes (36°F/hour), based on the ASHRAE Standard 90.1-2013.
• The newer, more energy efficient data center cooling methods (such as air side economization) can create much wider ranges of temperature and Relative Humidity (RH) in the UPS room and/or data center. There are two aspects of this increased operating environment that can, if ignored, create issues.
  - One is the creation of microclimates, which are persistent variations of temperature and/or RH within a single room. For example one side of the room is always cooler than the other side, no matter the actual temperature.
  - The other aspect is the rate of change of temperature and/or RH, which can occur during transitions within the cooling system. Examples: changing the mixture ratio of inside versus outside air, or external changes in the outside air when going from night to day, and back to night.
  - When ignored, either one of these aspects can create an undesirable microclimate at the UPS location. If the environment created by this microclimate exceeds the UPS operating specification, the UPS reliability, over time, will be reduced. These same environmental extremes will also create reliability concerns for any servers that are exposed to them.

Failure to follow guidelines may void your warranty.

The basic environmental requirements for operation of the UPS are:
• Ambient Temperature Range: 5–40°C (41–104°F)
• Recommended Operating Range: 5–40°C (41–104°F)
• Maximum Relative Humidity: 5–95%, noncondensing

**CAUTION**

If battery systems are located in the same room as the UPS, the battery manufacturer’s environmental requirements should be followed if they are more stringent than the UPS requirements. Operating temperatures above the recommended range will result in decreased battery life and performance, and may reduce or void the battery warranty.

The UPS ventilation requirements are shown in Table 1. To allow for future power upgrades, Eaton recommends using air conditioning or ventilation sized for the fully rated UPS kVA installed instead of the derated kVA ordered. Sizing the site cooling infrastructure to be capable of cooling the maximum kVA size will allow a full power rating upgrade without having to modify the infrastructure.

<table>
<thead>
<tr>
<th>Model</th>

<th>Minimum Required Cooling Air Flow</th>
</tr>
</thead>
<tbody>
<tr>
<td>Eaton 9155 UPS</td>
<td>8–15 kVA</td>
<td>129 liter/sec (274 cfm)</td>
</tr>
</tbody>
</table>

The UPS equipment operating environment must meet the weight requirements shown in Table 2 and the size requirements shown in Table 3.

When planning the installation, consider the UPS weight for floor loading. The strength of the installation surface must be adequate for point and distributed loadings. The approximate weights are shown in the following table.
Table 2. UPS Cabinet Weights

<table>
<thead>
<tr>
<th>Eaton 9155 UPS</th>

</tr>
</tbody>
</table>

NOTE For full UPS and EBM cabinet dimensions and Center of Gravity measurements, see Eaton 9155 UPS 8–15 kVA User’s Guide.

3.3 UPS System Power Wiring Preparation

Read and understand the following notes while planning and performing the installation:

WARNING

As a result of the connected loads high leakage current is possible. Connection to earth ground is required for safety and proper product operation. Do not check UPS operation by any action that includes removal of the earth (ground) connection with loads attached.

- Refer to national and local electrical codes for acceptable external wiring practices.
- For external wiring, use 90°C copper wire.

IMPORTANT

This product has been evaluated for use with copper wire only. For external wiring, use only 90°C copper wire.

Wire sizes listed in Table 4 through Table 6 are for copper wiring only. If wire is run in an ambient temperature greater than 40°C, larger size wire may be necessary. Wire sizes are based on using the specified breakers.

- Recommended wire sizes are based on NFPA National Electrical Code® (NEC®) 70 Table 310.15(B)(16) 90°C ampacity with 40°C ambient correction factors.
- Input neutral must be wired for proper operation. Failure to connect an input neutral will void the warranty. If the optional input transformer is installed, an input neutral is not required.

- The Eaton 9155 UPS is a single-feed UPS only.

### 3.4 Inspecting and Unpacking the Equipment

The cabinet is shipped bolted to a metal and wood pallet with outer protective packaging material covering the cabinets.

1. Carefully inspect the outer packaging for evidence of damage during transit.

**CAUTION**

Do not install a damaged cabinet. Report any damage to the carrier and contact an Eaton service representative immediately.

**NOTE**

Check the battery recharge date on the packaging label. If the date has expired and the batteries were never recharged, do not use the UPS. Contact your service representative.

2. Use a forklift or pallet jack to move the packaged cabinet to the installation site, or as close as possible, before unpacking. If possible, move the cabinet using the pallet. Insert the forklift or pallet jack forks between the supports on the bottom of the pallet.

3. Set the pallet on a firm, level surface, allowing a minimum clearance of 3m (10 ft) on each side for removing the cabinet from the pallet.

4. Remove the protective packaging material from the cabinet and recycle in a responsible manner. Retain any parts kits packaged with the cabinet.

5. Inspect the contents for any evidence of physical damage, and compare each item with the Bill of Lading. If damage has occurred or shortages are evident, contact an Eaton service representative immediately to determine the extent of the damage and its impact on further installation.

If any equipment has been damaged during shipment, keep the shipping and packing materials for the carrier or place of purchase and file a claim for shipping damage. If you discover damage after acceptance, file a claim for concealed damage.
To file a claim for shipping damage or concealed damage: 1) File with the carrier within 15 days of receipt of the equipment; 2) Send a copy of the damage claim within 15 days to your service representative.

**NOTE**  
While waiting for installation, protect the unpacked cabinet from moisture, dust, and other harmful contaminants. Failure to store and protect the UPS properly may void the warranty.

**NOTE**  
Check the battery recharge date on the packaging label. If the date has expired and the batteries were never recharged, do not use the UPS. Contact your service representative.
Chapter 4  Parallel UPS System Installation

4.1  Preliminary Installation Information

\[ \text{\textbf{WARNING}} \]

Installation should be performed only by qualified personnel.

Refer to the following while installing the UPS system:

- Review Chapter 3 UPS Installation Plan and Unpacking, for cabinet dimensions, equipment weight, wiring and terminal data, and installation notes.
- Do not tilt the cabinets more than ±10° during installation.
- Remove conduit landing plates to add conduit landing holes as required.
- If perforated floor tiles are required for ventilation, place them in front of the UPS.

4.2  Unloading the UPS Cabinet from the Pallet

The following tools are required for unloading the cabinet(s):

- 15 mm wrench or socket
- 7 mm nutdriver or socket

\[ \text{\textbf{CAUTION}} \]

The UPS and Extended Battery Module (EBM) are heavy (see Table 2). Unloading the cabinets requires at least two people to safely remove the cabinets from the pallet.

To remove the UPS or EBM from the shipping pallet:

1.  Remove the two M10 bolts securing the stabilizing bracket to the pallet (see Figure 2).
2. Remove the M10 bolts from the two Pallet Brackets securing the leveling feet to the pallet (see Figure 3).

3. Remove the four M4 screws securing the stabilizing bracket to the cabinet rear panel and remove the bracket (see Figure 3). Retain the hardware for later use.

   **NOTE** Be sure to retain the stabilizing bracket and hardware for later re-assembly onto the cabinet.

4. Remove the front cover from the bottom cabinet to access the front shipping bracket.
   Press and release the handle latch at the bottom of the cover and then lift the cover up and off the cabinet.

5. Remove the three M10 bolts securing the rear shipping pad to the pallet and remove the shipping pad (see Figure 3).

   **NOTE** Hold the back of the cabinet so that the bolts can be removed easily without the cabinet rolling backward.

6. Remove the two M10 bolts securing the front shipping bracket and remove the bracket (see Figure 3).
   If needed, adjust the leveling feet to release the bracket.
7. Reinstall the front cover removed in Step 4.
   Hang the top edge of the cover on the cabinet first, then lower the bottom edge and snap into place.

   **NOTE**  
   Be sure to support the front and back of the cabinet when rolling it off the pallet to prevent tipping.

8. Slowly roll the cabinet toward the rear of the pallet. Once the pallet tilts, continue rolling the cabinet down the pallet until the cabinet touches the floor (see Figure 4).
   If needed, adjust the leveling feet so that the cabinet will roll.
9. With the cabinet supported, slowly pull the pallet away from the cabinet (see Figure 5).

Figure 5. Removing the Pallet

10. Roll the cabinet to the desired location.

4.3 Parallel Installation

The Eaton 9155 UPS has the following power connections:

- 2-phase (L1 and L2), neutral, and ground connection for rectifier/bypass input
- 2-phase (L1 and L2), neutral, and ground connection for load output

The nominal input/output voltages are:

- 100/200, 110/220, or 120/240 Vac with 180° phase displacement
• 120/208 or 127/220 Vac with 120° phase displacement

Output overcurrent protection and disconnect switch must be provided by others.

**WARNING**

Only qualified service personnel (such as a licensed electrician) should perform the UPS installation. Initial startup must be performed by an authorized Eaton Customer Service Engineer. Risk of electrical shock.

To hardwire the UPS:

1. Verify that the electrical connections to the installation site have been properly installed.
2. A wall-mounted, user-supplied, readily-accessible disconnection device must be incorporated in the input wiring.

Compare the circuit breaker ratings to the ones in the following wiring table:

**Table 7. Circuit Breaker Ratings**

<table>
<thead>
<tr>
<th>UPS Capacity</th>
<th>Input Circuit Breaker Rating</th>
<th>Minimum Wire Size*</th>
</tr>
</thead>
<tbody>
<tr>
<td>8 kVA</td>
<td>60A</td>
<td>4 AWG (21.2 mm²)</td>
</tr>
<tr>
<td>10 kVA</td>
<td>80A</td>
<td>3 AWG (26.7 mm²)</td>
</tr>
<tr>
<td>12 kVA</td>
<td>100A</td>
<td>2 AWG (33.6 mm²)</td>
</tr>
<tr>
<td>15 kVA</td>
<td>100A</td>
<td>2 AWG (33.6 mm²)</td>
</tr>
</tbody>
</table>

*Use only 75°C -rated copper wire. Minimum wire size is based on 120/208 full load ratings applied to NEC Code Table 310-15(B)(16). Code may require a larger AWG size than shown in this table because of temperature, number of conductors in the conduit, or long service runs. Follow local requirements.

**NOTE**

To accommodate the feature of easy system expandability, it is recommended that initial installation of the Eaton 9155 UPS contain wiring to support the maximum capacity of the UPS cabinet.

3. Switch off utility power to the distribution point where the parallel tie cabinet and UPSs will be connected. Be absolutely sure there is no power.
4. Determine your equipment’s grounding requirements according to your local electrical code.
5. Remove the parallel tie cabinet front cover (see Figure 6).
6. Remove the internal cover to gain access to the breakers (see Figure 7).
7. Punch holes for the conduit (AC input, each UPS output, and load connection) using a Greenlee® punch or similar device.

8. Verify that the parallel bypass breaker is in the OFF position (see Figure 8).

9. Mount the parallel tie cabinet to the wall and install the conduit.
10. Verify that each UPS battery circuit breaker is in the OFF position (see Figure 9).
11. From each UPS, remove the UPS wiring access cover and retain (see Figure 9).

12. Hardwire the UPS input terminations (TB1-1 through TB1-5) for each UPS.

See Table 8 for specifications and Figure 10 for a detailed view of the UPS terminal block.

**NOTE**  
Input neutral must be wired for proper operation. Failure to connect an input neutral will void the warranty.

<table>

*Use only 75°C-rated copper wire. Minimum wire size is based on 120/208 full load ratings applied to National Electrical Code (NEC) Table 310-15(B)(16).

Figure 10. UPS Terminal Block

Hardwire the output terminations (TB1-6 through TB1-9) from each UPS to the parallel tie cabinet (see Figure 11).
14. Replace each UPS wiring access cover.

15. Hardwire the load to the parallel tie cabinet (see Figure 12).
16. Wire the AC input to the bypass breaker (see Figure 13).
17. Verify the phase rotation for each UPS and the bypass input.
18. Reinstall the internal cover removed in Step 6.
19. Reinstall the parallel tie cabinet front cover removed in Step 5.
20. Continue to paragraph 4.4 Installing Options.
4.4 Installing Options

This section describes the Powerware Hot Sync CAN Bridge Card.

For other options, such as additional X-Slot® cards, power management software, remote emergency power-off (REPO), relay output contacts, or programmable signal inputs, refer to the *Eaton 9155 UPS (8–15 kVA) User’s Guide*.

*Figure 15* shows the location of the communication options and control terminals on the UPS.
Figure 15. Communication Options and Control Terminals

4.4.1 Powerware Hot Sync CAN Bridge Card

The Powerware Hot Sync CAN Bridge Card, shown in Figure 16, can be installed to provide connectivity for operational mode control and metering of a parallel system at any UPS in the system.
To install the Powerware Hot Sync CAN Bridge Card:

1. Remove the front covers of all cabinets, starting with the top cabinet.
   Press and release the handle latch at the bottom of each cover and then lift the cover up and off the cabinet (see Figure 17).

Figure 17. Removing the Front Covers
2. If you ordered a factory-configured parallel UPS, remove the Powerware Hot Sync CAN Bridge Card from the X-Slot on the front of the UPS. Retain the screws. Otherwise, remove the X-Slot communication bay cover and retain the screws.

3. Set the jumper pins on the Powerware Hot Sync CAN Bridge Card according to the parallel configuration (see Figure 18):
   - If only two UPSs are paralleled, then set both cards to Pins 1 and 2.
   - For three paralleled UPSs, set the cards of the first and last UPS to Pins 1 and 2; set the card for the middle UPS to Pins 2 and 3.

**Figure 18. Setting the CAN Bridge Card Jumper J7 (Side View)**

![Jumper J7 - Pins 1 and 2](image1)

![Jumper J7 - Pins 2 and 3](image2)

**NOTE** If you are installing another X-Slot card, be sure to install the Powerware Hot Sync CAN Bridge Card in X-Slot 2.
4. Loosely install the Powerware Hot Sync CAN Bridge Card into an open X-Slot on the front of the UPS. You may want to remove the terminal block from the CAN Bridge Card for better wiring access.

5. Strip shielded, four-wire, twisted-pair wire for CAN Bridge Card wiring. Recommended wire size is 18 AWG maximum.

6. Install the CAN Bridge Card wiring between each UPS (see Figure 19). Be sure to check correct polarity for Pins 8 and 9:
   - Connect SHIELD Pin 10 on all cards together.
   - Connect CAN H Pin 9 and CAN L Pin 8 (twisted pair) on all cards together.
   - Connect COM Pin 4 and NC Pin 3 (twisted pair) on all cards together.

7. Install the pull-chain wiring between the CAN Bridge Card and Signal Input 2 on each UPS and daisy chain the wiring to each UPS. Be sure to check correct polarity (see Figure 19):
   - Connect COM Pin 4 to Signal Input 2 Pin 1 on each UPS.
   - Connect NC Pin 3 to Signal Input 2 Pin 2 on each UPS.

**CAUTION**

If polarity or wiring is not correct, the parallel system does not operate normally. For example, when shutting down one UPS, the remaining UPS transfers the load to bypass instead of supporting the load. Verify all CAN Bridge Card wiring is correct for proper operation.

**NOTE**

Signal Input 2 can still be used for building alarms; it is automatically rerouted to the CAN Bridge Card.
8. Secure the Powerware Hot Sync CAN Bridge Card with the screws removed in Step 2.
9. On the bottom cover (and also the middle cover if 3-high), remove a knockout tab in the top edge of the cover for each cable:
   
   With wire cutters, cut either side of the tab and twist down to remove the tab (see Figure 20).
10. Route the cable(s) to the approximate location of the cover access holes.

11. Reinstall the front covers, starting with the bottom cabinet (see Figure 21).

   Hang the top edge of the cover on the cabinet first, then lower the bottom edge and snap into place. Be sure the cables fit in the access holes in the covers.
12. Continue to paragraph 4.5 Stabilizing the Cabinet to complete the parallel UPS installation.

**4.5 Stabilizing the Cabinet**

<table>
<thead>
<tr>
<th>NOTE 1</th>
<th>For seismic installations, you MUST order and install an Eaton 9355 UPS seismic kit; do not use the following instructions.</th>
</tr>
</thead>
<tbody>
<tr>
<td>NOTE 2</td>
<td>For non-seismic installations, you MUST install the stabilizing bracket on all 3-high cabinets. The stabilizing bracket is optional for 2-high cabinets.</td>
</tr>
</tbody>
</table>

To stabilize the cabinet(s):

1. Lower the leveling feet to prevent the cabinet from rolling.
2. Attach the stabilizing bracket to the bottom of the cabinet rear panel using the retained hardware from the shipping pallet according to the cabinet configuration:
   - For one cabinet, see Figure 23.
   - For two cabinets, see Figure 24.
   - For three cabinets, see Figure 25.

   **NOTE** No more than three cabinets can be attached together. For four cabinets, use two of the two-cabinet installations. For five cabinets, use one three-cabinet and one two-cabinet installation.

3. Use the holes and slots in the bottom of the bracket to attach the cabinet to the flooring if desired.

4. Continue to one of the following sections:
   - See paragraph 4.6 Extended Battery Module Installation to install optional EBMs.
   - See Chapter 5 UPS Operating Instructions to start up the UPS.
Figure 23. Stabilizing Bracket with One Cabinet

M4 Screws
Figure 24. Stabilizing Bracket with Two Cabinets
Figure 25. Stabilizing Bracket with Three Cabinets

NOTE 1 A maximum of 22 battery strings can be installed in one configuration, including UPS batteries (4 EBM-64 models or 3 EBM-96 models). UPS-32 models contain 2 strings; UPS-64 models contain 4 strings; EBM-64 models contain 4 strings; and EBM-96 models contain 6 strings.

NOTE 2 For non-seismic installations, you MUST install the stabilizing bracket on all 3-high cabinets. The stabilizing bracket is optional for 2-high cabinets.

NOTE 3 In a parallel system, each UPS should have the same number of Extended Battery Modules (EBMs) to ensure equivalent runtimes.

To install the optional Extended Battery Module (EBM):

1. Position the EBM adjacent to the next cabinet.
2. Verify that all battery circuit breakers are in the OFF position (see Figure 26).
3. Remove the two ground straps from the EBM rear panel.
4. Install one ground strap between the UPS and EBM rear panels as shown in Figure 26.
5. If additional EBMs are installed, attach another ground strap between the first and second EBM as shown in Figure 26. Repeat for each additional EBM.
6. Plug the EBM cable into the UPS battery connector.
7. If additional EBMs are installed, plug the EBM cable of the second cabinet into the battery connector on the first EBM. Repeat for each additional EBM.

**Figure 26. Typical EBM Installation (2-High Cabinets Shown)**

8. Remove the top front covers of all cabinets.
   Press and release the handle latch at the bottom of the cover and then lift the cover up and off the cabinet.

9. Install the remaining ground straps between each cabinet (see Figure 27).

10. Reinstall the top front covers removed in Step 8.
    Hang the top edge of the cover on the cabinet first, then lower the bottom edge and snap into place.

11. Continue to Chapter 5 UPS Operating Instructions to start up the UPS.

**NOTE**
After UPS startup, ensure maximum battery runtime by configuring the UPS for the correct number of EBMs (see paragraph 5.3 Configuring the UPS for EBMs).
Figure 27. Front Ground Strap Installation (2-High Cabinets Shown)
Chapter 5 UPS Operating Instructions

This chapter contains information on how to use the Eaton 9155 UPS, including front panel operation, UPS startup and shutdown, and configuring the UPS for Extended Battery Modules (EBMs).

5.1 Control Panel Functions

The UPS has a four-button graphical LCD with backlight. It provides useful information about the UPS itself, load status, events, measurements, and settings (see Figure 28).

Figure 28. Eaton UPS Control Panel

The following table shows the indicator status and description.

<table>
<thead>
<tr>
<th>Indicator</th>

5.1.1 Changing the Language
Press and hold the first button on the left for approximately five seconds to select the language menu. This action is possible from any LCD menu screen.

5.1.2 Display Functions
As the default or after 15 minutes of inactivity, the LCD displays the selectable startup screen. The default is the Eaton logo and can be changed to the Mimic screen in the User Settings menu.

The backlit LCD automatically dims after a long period of inactivity. Press any button to restore the screen.

Use the two middle buttons (↑ and ↓) to scroll through the menu structure. Press the button to enter a submenu. Press the ← button to select an option. Press the ESC button to cancel or return to the previous menu.

The following table shows the basic menu structure.

5.2 Parallel UPS Startup

**WARNING**

Only qualified service personnel (such as a licensed electrician) should perform the UPS installation. Initial startup must be performed by an authorized Eaton Customer Service Engineer. Risk of electrical shock.

Verify that UPS installation has been carried out correctly and the UPS ground has been connected.

NOTE In a parallel capacity system (2+0 or 2+1), determine the minimum number of UPSs required for capacity.

To start up the parallel system (Initial Startup or from complete System power off):

1. Verify that all UPS breakers on the parallel tie cabinet are in the OFF position.
2. Switch ON the utility power where the UPSs are connected.
3. Wait for the front panel LCD to illuminate.
   
   The \( \Delta \) indicator flashes on each UPS.
4. Verify fans have started.
5. Switch all battery circuit breakers to the ON position.
   
   The \( \Delta \) indicator stops flashing on each UPS.
6. Configure the UPS for parallel operation through the front panel:
   
   • Press any button on the front panel display to activate the menu options.
   
   • Using the ↑ button, scroll to the Settings menu, and then press the → button twice to select the User Settings menu.
   
   • Use the ↓ button to scroll to the Parallel Operation Mode option and press the ← button to enter the menu.
   
   • Use the ↓ button to scroll the desired option (either Redundant Mode or Capacity Mode).
   
   • Press the ESC button to save the setting.
7. Press the ESC button until the Eaton logo or Mimic screen appears.
8. Repeat Steps 6 and 7 for the remaining UPSs in the parallel system.
9. Shut down each UPS:
   
   • Switch the UPS battery circuit breaker to the OFF position.
   
   The UPS is disconnected from the batteries and is on logic power only.
10. Cycle the utility power to the distribution point where the parallel tie cabinet and UPSs are connected. Wait until the LCD is off before reapplying utility power.
11. Switch the UPS breakers on the parallel tie cabinet to the ON position.
12. Switch all battery circuit breakers to the ON position.
13. Verify that no alarms appear on the UPS front panel display.

   ![Alarm Indicator] If the indicator is flashing, do not proceed until all alarms are clear. Check the UPS status from the front panel to view the active alarms. Correct the alarms and restart if necessary.

14. Verify the phase rotation for each UPS.

15. From the UPS Status menu, select the Units on CAN Bus option and verify that all UPSs appear in the list.

   If all UPSs appear in the list, press the button until the Eaton logo or Mimic screen appears.

   If any UPS is missing, verify the Powerware Hot Sync CAN Bridge Card connections and recheck the status from the UPS front panel.

16. Press the button on the front panel display and then press the button to select the TURN UPS ON/OFF menu.

17. Select the System On option; press and hold the button for three seconds, until the UPS stops beeping.

   The UPS goes to Bypass mode for five seconds, and then the indicator illuminates. Each UPS should be in Normal mode.

18. Press the button until the Eaton logo or Mimic screen appears.

5.3 Configuring the UPS for EBMs

**NOTE** Each UPS in a parallel system must have its own EBM and the same number of EBMs to ensure consistent runtimes.

To ensure maximum battery runtime, configure the UPS for the correct number of EBMs:

1. Press any button on the front panel display to activate the menu options.

2. Using the ↑ button, scroll to the Settings menu.

3. Press the → button twice to select the User Settings menu.

4. Using the ↓ button, scroll to the Battery Setup option and press the → button.

5. Use the ↑ or ↓ buttons to select the number of strings according to your UPS configuration:

<table>
<thead>
<tr>
<th>All 2-High UPS and EBM Cabinets*</th>
<th>Number of Strings</th>
</tr>
</thead>
<tbody>
<tr>
<td>UPS + 1 EBM</td>
<td>6</td>
</tr>
<tr>
<td>UPS + 2 EBMs</td>
<td>10</td>
</tr>
<tr>
<td>UPS + 3 EBMs</td>
<td>14</td>
</tr>
<tr>
<td>UPS + 4 EBMs</td>
<td>18</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>All 3-High UPS and EBM Cabinets*</th>
<th>Number of Strings</th>
</tr>
</thead>
<tbody>
<tr>
<td>UPS + 1 EBM</td>
<td>10</td>
</tr>
<tr>
<td>UPS + 2 EBMs</td>
<td>16</td>
</tr>
</tbody>
</table>
6. Press the button to save the setting.

7. Press the button until the Eaton logo appears.

5.4 Parallel System Shutdown

To remove power to the parallel UPS system output:

1. Press any button on the front panel display to activate the menu options.

2. Press the button on the front panel display and then press the button to select the TURN UPS ON/OFF menu.

3. Press the button to select the System Off option; press and hold the button for three seconds, until the UPS stops beeping.

4. Repeat Step 3.
   
   The input contactor opens.
   
   The UPS removes power to the parallel UPS system output.

5. Press the button until the Eaton logo or Mimic screen appears.

6. Repeat Steps 1 through Step 5 for each UPS in the Parallel System.

7. Switch each of the UPS breakers on the parallel tie cabinet to the OFF position.

8. Switch all battery circuit breakers to the OFF position.

9. Switch OFF the utility power to the Parallel UPS system.

5.5 Individual UPS Shutdown

To shut down a single UPS in the parallel system:

1. Press any button on the front panel display to activate the menu options.

2. Press the button on the front panel display and then press the button to select the TURN UPS ON/OFF menu.

3. Press the button to select the System Off option; press and hold the button for three seconds, until the UPS stops beeping.

4. Repeat Step 3.
   
   The input contactor opens.

5. Switch the UPS battery circuit breaker to the OFF position.
   
   The UPS is disconnected from the batteries and is on logic power only.

6. Switch the UPS breaker on the parallel tie cabinet to the OFF position.
NOTE
If there is only one breaker for all UPSs, do not switch off utility power until all UPSs are shut down.

7. Switch OFF the utility power where the UPS is connected.

NOTE
If you are shutting down all the UPSs in a parallel system, repeat Steps 2 through 6 for each UPS then remove utility power.

5.6 Restarting the Parallel System

To restart the parallel system:

1. Verify that all UPS breakers on the parallel tie cabinet are in the OFF position.
2. Switch ON the utility power where the UPSs are connected.
3. Wait for the front panel LCD to illuminate.

The \( \Delta \) indicator flashes on each UPS.

4. Switch all battery circuit breakers to the ON position.

The \( \Delta \) indicator stops flashing on each UPS.

5. Switch the UPS breakers on the parallel tie cabinet to the ON position.

6. Verify that no alarms appear on the UPS front panel display.

If the \( \Delta \) indicator is flashing, do not proceed until all alarms are clear. Check the UPS status from the front panel to view the active alarms. Correct the alarms and restart if necessary.

7. Press the \( \text{ESC} \) button once and then press the \( \rightarrow \) button to select the TURN UPS ON/OFF menu.

8. Press the \( \downarrow \) button to select the System On option; press and hold the \( \leftarrow \) button for three seconds, until the UPS stops beeping.

The UPS goes to Bypass mode for five seconds, and then the \( \bigcirc \) indicator illuminates. Each UPS should be in Normal mode.

9. Press the \( \text{ESC} \) button until the Eaton logo or Mimic screens appears.

5.7 Parallel UPS Bypass Operation

To switch the parallel UPS from Normal mode to maintenance bypass:

1. From any UPS, set the system to internal Bypass mode:

   - Using the \( \uparrow \) button on the front panel display, scroll to the Control menu option and press the \( \rightarrow \) button.
   - Press the \( \leftarrow \) button to select the Go to Bypass Mode option.

The \( \bigcirc \) and \( \bigcirc \) indicators illuminate, indicating the UPS system is operating in Bypass mode.
2. Switch the bypass breaker on the parallel tie cabinet to the ON position.
3. Switch the UPS breakers on the parallel tie cabinet to the OFF position.

**To return to Normal Mode from maintenance bypass:**

1. Verify that all UPS breakers on the parallel tie cabinet are in the OFF position.
2. Switch on utility power where the UPSs are connected.
   - In a parallel capacity system (2+0 or 2+1), apply utility to the minimum number of UPSs required for capacity.

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use the same UPS that was used to set internal bypass to return the parallel system to Normal mode.</td>
</tr>
</tbody>
</table>

3. Set the system to internal Bypass mode:
   - Using the button on the front panel display, scroll to the Control menu option and press the button.
   - Press the button to select the Go to Bypass Mode option.
   - The and indicators illuminate, indicating the UPS system is operating in Bypass mode.

4. Switch all UPS breakers on the parallel tie cabinet to the ON position.
5. Switch the bypass breaker on the parallel tie cabinet to the OFF position.
6. On the same UPS front panel, set the UPS to Normal mode:
   - Press the button to select the Go to Normal Mode option.
   - Each UPS should go to Normal mode.
## Chapter 6 Troubleshooting

The Eaton 9155 UPS is designed for durable, automatic operation and also alerts you whenever potential operating problems may occur. Usually the alarms shown by the control panel do not mean that the output power is affected. Instead, they are preventive alarms intended to alert the user. Use the following troubleshooting chart to determine the UPS alarm condition.

### 6.1 Typical Alarms and Conditions

The following table describes typical alarms and conditions; check the Event Log through the control panel for a list of active alarms. If an alarm appears with a service code, please contact the Help Desk (see page 6.3 Service and Support).

<table>
<thead>
<tr>
<th>Alarm or Condition</th>
<th>Possible Cause</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>On Battery</td>
<td>A utility failure has occurred and the UPS is in Battery mode.</td>
<td>The UPS is powering the equipment with battery power. Prepare your equipment for shutdown.</td>
</tr>
<tr>
<td>Battery Low</td>
<td>The battery is running low.</td>
<td>Five minutes or less of battery power remains (depending on load configuration and battery charge). Save your work and turn off your equipment. When utility power is restored, the UPS restarts automatically, provides power to the load, and charges the battery.</td>
</tr>
<tr>
<td>Battery Breaker</td>
<td>The UPS does not recognize the internal batteries.</td>
<td>Verify the battery circuit breaker is in the ON position. If the condition persists, contact your service representative.</td>
</tr>
<tr>
<td>Overload</td>
<td>Power requirements exceed the UPS capacity (greater than 100% of nominal; see page for specific output overload ranges).</td>
<td>Remove some of the equipment from the UPS. The UPS continues to operate, but may switch to Bypass mode if the load increases. The alarm resets when the condition becomes inactive.</td>
</tr>
<tr>
<td>Overtemperature</td>
<td>UPS internal temperature is too high or the fan has failed.</td>
<td>Turn the maintenance bypass switch to the SERVICE position. Otherwise, shut down the UPS. Clear vents and remove any heat sources. Allow the UPS to cool. Ensure the airflow around the UPS is not restricted. If the alarm disappears, turn the maintenance bypass switch back to the UPS position. If the condition persists, contact your service representative.</td>
</tr>
<tr>
<td>Battery test failed</td>
<td>The batteries need service.</td>
<td>Contact your service representative.</td>
</tr>
<tr>
<td>The UPS does not start.</td>
<td>The main utility breaker is off.</td>
<td>Verify that the main utility breaker is on. If an optional isolation transformer is installed, the input circuit breaker is off.</td>
</tr>
</tbody>
</table>
## Troubleshooting

<table>
<thead>
<tr>
<th>Alarm or Condition</th>
<th>Possible Cause</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>The remote emergency power-off (REPO) switch is active or the REPO connector is missing.</td>
<td></td>
<td>Reset the REPO switch and restart the UPS. Verify that the REPO connector is present.</td>
</tr>
<tr>
<td>Power is not available at the UPS output receptacles.</td>
<td>The UPS is in Standby mode.</td>
<td>Supply power to the connected equipment: Press any button on the front panel display to activate the menu options. Press the button on the front panel display and then press the button to select the TURN UPS ON/OFF menu. Press the button to select the TURN UPS ON option; press the button. Press and hold the button for three seconds, until the UPS stops beeping.</td>
</tr>
<tr>
<td>The UPS does not provide the expected backup time.</td>
<td>The batteries need charging or service.</td>
<td>Apply utility power for 48 hours to charge the batteries. If the condition persists, contact your service representative.</td>
</tr>
<tr>
<td>Battery circuit breakers are in the OFF position.</td>
<td></td>
<td>Switch all battery circuit breakers to the ON position.</td>
</tr>
<tr>
<td>Check Parallel Board</td>
<td>The UPS is not recognizing another parallel unit.</td>
<td>From the UPS Status menu, select the Units on CAN Bus option and verify that all UPSs appear in the list. If any UPS is missing, verify the Powerware Hot Sync CAN Bridge Card connections and recheck the status from the UPS front panel. If all UPSs appear in the list, check the pull-chain wiring (see page 26). Set the system to internal Bypass mode (see page 53). If the condition persists, contact your service representative.</td>
</tr>
<tr>
<td>Abnormal output voltage at startup</td>
<td>The UPS breaker on the parallel tie cabinet was not switched to the ON position properly.</td>
<td>Shut down the UPS where the alarm is indicated. Switch the UPS breaker on the parallel tie cabinet to the ON position. Start up the UPS. Select the System On option through the front panel of the UPS that was turned off.</td>
</tr>
<tr>
<td>Selective Trip</td>
<td>The Powerware Hot Sync CAN Bridge Card is not wired correctly.</td>
<td>Verify the CAN wiring (see page 26). Verify the pull-chain wiring (see page 26). If the condition persists, contact your service representative.</td>
</tr>
</tbody>
</table>

### 6.2 Silencing the Alarm

Before silencing an alarm, check the alarm condition and perform the applicable action to resolve the condition.

Press any button on the front panel display to silence the alarm. If the alarm status changes, the alarm beeps again, overriding the previous alarm silencing.

### 6.3 Service and Support

If you have any questions or problems with the UPS, call your Local Distributor or the Eaton Customer Support Center at one of the following telephone numbers.
Available support services:

- Onsite service technician scheduling
- Technical product information or troubleshooting
- RMA or parts request processing
- Purchase of replacement batteries or service contracts

United States: 1-800-843-9433 or 1-919-871-1800
Canada: 1-800-461-9166 ext 260
All other countries: Call your local service representative

Please have the following information ready when you call for service:

- Model number
- Serial number
- Firmware version number
- Date of failure or problem
- Symptoms of failure or problem
- Customer return address and contact information
