Class A EMC Statements

FCC Part 15

NOTE  This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

ICES-003

This Class A Interference Causing Equipment meets all requirements of the Canadian Interference Causing Equipment Regulations ICES-003.

Cet appareil numérique de la classe A respecte toutes les exigences du Reglement sur le materiel brouilleur du Canada.

IEC 62040-2

Some configurations are classified under IEC 62040-2 as “C2 UPS for Unrestricted Sales Distribution.”

IMPORTANT

To ensure you have the most up-to-date content and information for this product, please review the latest manual revision on our website, www.eaton.com/9355.
EATON
END-USER LICENSE AGREEMENT

1.0 DEFINITIONS
1.1 Documentation. “Documentation” mean the user guides and manuals for the installation and use of the UPS, whether made available online, provided in CD-ROM, DVD, hard copy or other form.
1.2 Firmware. “Firmware” means software programs that are embedded in the product for which Licensee is licensed hereunder, the Documentation hereof as well as the product it relates to. Licensee is granted a license hereunder in object code (machine-readable) form only except that certain software programs may include limited portions in source code (human-readable) form.
1.3 Update. “Update” means a subsequent release of the Firmware, if and when developed by Eaton. An Update does not include any release, new version, option, or future product, which Eaton licenses separately.

2.0 Firmware License
2.1 Ownership. Eaton or its third party licensors retain all title, copyright and other proprietary rights in, and ownership of the Firmware regardless of the manner in which the original or any copy thereof is modified or fixed.
2.2 License Grant. Eaton grants to Licensee a non-transferrable, non-exclusive, non assignable license in the Firmware as is and in the form provided to Licensee hereunder, to use the Firmware in connection with the operation of the product for which the Firmware pertains or other products as described by Eaton in the Documentation. Licensee does not acquire any right, title or ownership interest in the Firmware.

3.0 Restrictions and Requirements
3.1 Restrictions. Licensee will not, nor will it permit others to, modify, adapt, translate, reverse engineer, decompile, or disassemble the Firmware or any component thereof (including the Documentation), or create derivative works based on the Firmware (including the Documentation), except to the extent such forgoing restriction is prohibited by applicable law or applicable open source license terms, and only to any open source software component that is incorporated into the Firmware (if any). Copyright laws and international treaties protect the Firmware, the Documentation, the Firmware, and the Documentation, and any and all right, title and interest therein, is expressly prohibited. For avoidance of doubt, Eaton does not grant Licensee a license to any of Eaton’s brands, logos, designs, trade dress, serifs, fonts, graphics, or trade names, in whole or in part.

3.2 Transfers. Licensee agrees to install or allow installation of all corrections of substantial defects, security patches and/or updates, and shall employ all enhancements, for the Firmware in accordance with the instructions and as directed by Eaton.

3.3 Effect of Termination. Immediately upon termination of this Agreement or the license granted hereunder, Licensee will cease using the product. The parties rights and obligations under any surviving provisions of this Agreement will survive termination of this Agreement.

5.0 Notices
5.1 Notices. All notices required to be sent hereunder will be in writing and will be deemed to have been given when mailed by first class mail to the address shown below:

Chapter 1 Introduction

A parallel system with up to four uninterruptible power supplies (UPSs) can be installed to provide a parallel capacity and/or redundant system. This load sharing system provides more capacity than a single UPS and can provide backup, depending on the load and configuration. In addition, when one UPS is taken out of service for maintenance or is not operating properly, a redundant UPS continues to supply uninterrupted power to the critical load. A parallel Powerware Hot Sync® CAN Bridge Card provides connectivity for system metering and operational mode control. The parallel system consists of two to four UPSs, each with a parallel CAN Bridge Card and a parallel cabinet.

Figure 1 shows the Eaton 9355 UPS and an optional Extended Battery Module (EBM).

!! IMPORTANT !!

Startup and operational checks must be performed by an authorized Eaton Customer Service Engineer, or the warranty terms specified on the product’s resources page become void. See Chapter 8 Warranty for details. This service is offered as part of the sales contract for the UPS. Contact an Eaton service representative in advance (a minimum two-week notice is required) to reserve a preferred startup date.

Figure 1. The Eaton 9355 UPS and EBM (3-High Cabinets Shown)

Providing outstanding performance and reliability, the Eaton 9355 UPS’s unique benefits including the following:

• Online UPS design with pure sine wave output. The UPS filters and regulates incoming AC power and provides consistent power to your equipment without draining the battery.

• More wattage in less space with a 0.9 power factor—protecting more equipment and leaving more room for expansion.

• Support for Powerware Hot Sync paralleling of multiple modules for redundancy or extra capacity.

• Input current total harmonic distortion (THD) of less than five percent, using active input power factor correction.
• ABM® technology that uses advanced battery management to increase battery service life, optimize recharge time, and provide a warning before the end of useful battery life.

• Up to three hours of extended runtime with added EBMs.

• Advanced power management with the Software Suite CD for graceful shutdowns and power monitoring.

• Emergency shutdown control through the remote emergency power-off (REPO) port.

• Start-on-battery capability for powering up the UPS even if utility power is not available.

• Standard communication options with a DB-9 serial port, relay output contacts, and programmable signal inputs.

• Optional X-Slot® cards with enhanced communication capabilities for increased power protection and control.

For further details on available options, see Eaton 9355 UPS 10/15 kVA User’s Guide.

1.1 Using This Manual

This manual describes how to install and operate the Eaton 9355 UPS. Read and understand the procedures described in this manual to ensure trouble-free installation and operation. In particular, be thoroughly familiar with the REPO procedure or the LOAD OFF procedure, see Chapter 6 UPS Operating Instructions.

The information in this manual is divided into sections and chapters. The system, options, and accessories being installed dictate which parts of this manual should be read. At a minimum, Chapter 1 Introduction through Chapter 4 UPS System Installation and Chapter 6 UPS Operating Instructions should be examined.

Read through each procedure before beginning the work. Perform only those procedures that apply to the UPS system being installed or operated.

1.2 Conventions Used in This Manual

This manual uses these type conventions:

• **Bold type** highlights important concepts in discussions, key terms in procedures, and menu options, or represents a command or option that you type or enter at a prompt.

• **Italic type** highlights notes and new terms where they are defined.

• **Screen type** represents information that appears on the screen or LCD.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Keys]</td>
<td>Brackets are used when referring to a specific key, such as [Enter] or [Ctrl].</td>
</tr>
</tbody>
</table>

In this manual, the term UPS refers only to the UPS cabinet and its internal elements. The term UPS system refers to the entire power protection system – the UPS cabinet, an external battery system, and options or accessories installed.

The term line-up-and-match refers to accessory cabinets that are physically located adjacent to the UPS. The term standalone refers to accessory cabinets that are located separate from the UPS.

Left and right side notations are referenced standing in front of the cabinet.
1.3 Symbols, Controls, and Indicators

The following are examples of symbols used on the product to alert you to important information:

**RISK OF ELECTRIC SHOCK** - Observe the warning associated with the risk of electric shock symbol.

**CAUTION: REFER TO OPERATOR’S MANUAL** - Refer to your operator’s manual for additional information, such as important operating and maintenance instructions.

This symbol indicates that you should not discard the product in the trash. This product must be disposed of properly. For more information, contact your local recycling/reuse or hazardous waste center.

This symbol indicates that you should not discard waste electrical or electronic equipment (WEEE) in the trash. For proper disposal, contact your local recycling/reuse or hazardous waste center.

**ON** - Indicates that the switch is in the ON position.

**OFF** - Indicates that the switch is in the OFF position.

**PHASE** - The word “phase.”

1.4 For More Information

Refer to the *Eaton 9355 UPS 10/15 kVA User’s Guide* for the following additional information:

- Installation instructions, including site preparation, planning for installation, wiring and safety information, and detailed illustrations of cabinets with dimensional and connection point drawings
- Operation, including breakers, standard features and optional accessories, procedures for using the bypass functions, and information about maintenance

Refer to the *Eaton Remote Monitoring Device (RMD) Installation and Operation Manual* for additional installation and operating instructions.

- Visit [www.eaton.com/powerquality](http://www.eaton.com/powerquality) or contact an Eaton service representative for information on how to obtain copies of these manuals.
1.5  Getting Help

If help is needed with any of the following:

- Scheduling initial startup
- Regional locations and telephone numbers
- A question about any of the information in this manual
- A question this manual does not answer

Please call the Customer Reliability Center at:

United States:  1-800-843-9433
Canada:  1-800-461-9166 ext 260
All other countries:  Call your local service representative

Please have the following information ready when you call for service:

- Model number
- Serial number
- Firmware version number
- Date of failure or problem
- Symptoms of failure or problem
- Customer return address and contact information

Please use the following e-mail address for manual comments, suggestions, or to report an error in this manual:

E-ESSDocumentation@eaton.com

1.6  Equipment Registration

Please visit www.eaton.com/pq/register to register your new Eaton UPS / Eaton UPS Accessory.

Model Number:  

Serial Number:  

Chapter 2  Safety Warnings

**IMPORTANT SAFETY INSTRUCTIONS SAVE THESE INSTRUCTIONS**

This manual contains important instructions that you should follow during installation and maintenance of the UPS and batteries. Please read all instructions before operating the equipment and save this manual for future reference.

**DANGER**

This UPS contains **LETHAL VOLTAGES**. All repairs and service should be performed by **AUTHORIZED SERVICE PERSONNEL ONLY**. There are **NO USER SERVICEABLE PARTS** inside the UPS.

**WARNING**

- This UPS contains its own energy source (batteries). The UPS output may carry live voltage even when the UPS is not connected to an AC supply.
- To reduce the risk of fire or electric shock, install this UPS in a temperature and humidity controlled, indoor environment, free of conductive contaminants. Ambient temperature must not exceed 40°C (104°F). Do not operate near water or excessive humidity (95% maximum).
- To reduce the risk of fire, connect only to a circuit provided with 100 amperes maximum branch circuit overcurrent protection in accordance with the National Electrical Code® (NEC®), ANSI/NFPA 70.
- Output overcurrent protection and disconnect switch must be provided by others.

**CAUTION**

- Batteries can present a risk of electrical shock or burn from high short circuit current. Observe proper precautions. Servicing should be performed by qualified service personnel knowledgeable of batteries and required precautions. Keep unauthorized personnel away from batteries.
- Proper disposal of batteries is required. Refer to your local codes for disposal requirements.
- Never dispose of batteries in a fire. Batteries may explode when exposed to flame.
2.1 Consignes de Sécurité

2.1.1 CONSIGNES DE SÉCURITÉ IMPORTANTES CONSERVER CES INSTRUCTIONS CE MANUEL CONTIENT DES CONSIGNES DE SÉCURITÉ IMPORTANTES

⚠️ DANGER!

Cet onduleur contient des TENSIONS MORTELLES. Toute opération d'entretien et de réparation doit être EXCLUSIVEMENT CONFIÉE À UN PERSONNEL QUALIFIÉ AGREE. AUCUNE PIÈCE RÉPARABLE PAR L’UTILISATEUR ne se trouve dans l’onduleur.

⚠️ AVERTISSEMENT!

- Cet onduleur renferme sa propre source d’énergie (batteries). Les prises de sortie peuvent être sous tension même lorsque l’onduleur n’est pas branché sur le secteur.
- Pour réduire les risques d’incendie et de décharge électrique, installer l’onduleur uniquement à l’intérieur, dans un lieu dépourvu de matériaux conducteurs, où la température et l’humidité ambiante sont contrôlées. La température ambiante ne doit pas dépasser 40 °C. Ne pas utiliser à proximité d’eau ou dans une atmosphère excessivement humide (95 % maximum).
- La protection contre une surintensité pour le(s) circuit(s) de sortie de courant alternatif doit être fournie par un autre fournisseur.
- Les interrupteurs de déconnexion convenables pour le(s) circuit(s) de sortie de courant alternatif doivent être fournie par un autre fournisseur.

⚠️ ATTENTION!

- Les batteries peuvent présenter un risque de décharge électrique ou de brûlure par des courts-circuits de haute intensité. Prendre les précautions nécessaires.
- Une mise au rebut réglementaire des batteries est obligatoire. Consulter les règlements en vigueur dans votre localité.
- Ne jamais jeter les batteries au feu. L’exposition aux flammes risque de les faire exploser.
2.2 Advertencias de Seguridad

2.2.1 INSTRUCCIONES DE SEGURIDAD IMPORTANTES GUARDE ESTAS INSTRUCCIONES ESTE MANUAL CONTIENE INSTRUCCIONES DE SEGURIDAD IMPORTANTES

PELIGRO
Este SIE contiene VOLTAJES MORTALES. Todas las reparaciones y el servicio técnico deben ser efectuados SOLAMENTE POR PERSONAL DE SERVICIO TÉCNICO AUTORIZADO. No hay NINGUNA PARTE QUE EL USUARIO PUEDA REPARAR dentro del SIE.

ADVERTENCIA
- Este SIE contiene su propia fuente de energía (las baterías). Los receptáculos de salida pueden transmitir corriente eléctrica aun cuando el SIE no esté conectado a un suministro de corriente alterna (c.a.).
- Para reducir el riesgo de incendio o de choque eléctrico, instale este SIE en un lugar cubierto, con temperatura y humedad controladas, libre de contaminantes conductores. La temperatura ambiente no debe exceder los 40°C. No trabaje cerca del agua o con humedad excesiva (95% máximo).
- La protección contra exceso de corriente para el/los circuito(s) de CA de salida será suministrada por terceros.
- Los interruptores de desconexión debidamente clasificados para el/los circuito(s) de CA de salida serán suministrados por terceros.

PRECAUCIÓN
- Las baterías pueden presentar un riesgo de descargas eléctricas o de quemaduras debido a la alta corriente de cortocircuito. Preste atención a las instrucciones correspondientes.
- Es necesario desear las baterías de un modo adecuado. Consulte las normas locales para conocer los requisitos pertinentes.
- Nunca deseche las baterías en el fuego. Las baterías pueden explotar si se las expone a la llama.
Chapter 3 UPS Installation Plan and Unpacking

Use the following basic sequence of steps to install the UPS:

1. Create an installation plan for the UPS system.
2. Prepare your site for the UPS system.
3. Inspect and unpack the UPS cabinet.
4. Unload and install the UPS cabinet, and wire the system.
5. Complete the Installation Checklist.
6. Have authorized service personnel perform preliminary operational checks and start up the system.

The instructions are intended for the chief operator/system supervisor, electrical consultants, and installation electricians. Local regulations and electrical code must be followed during the UPS installation.

3.1 Creating an Installation Plan

Before installing the UPS system, read and understand how this manual applies to the system being installed. Use this chapter’s procedures and illustrations and those in Chapter 4 UPS System Installation to create a logical plan for installing the system.

3.2 Preparing the Site

For the UPS system to operate at peak efficiency, the installation site should meet the environmental parameters outlined in this manual. The operating environment must meet the weight, clearance, and environmental requirements specified.

3.2.1 Environmental and Installation Considerations

The UPS system installation must meet the following guidelines:

- The system must be installed on a level floor suitable for computer or electronic equipment.
- The system must be operated at an altitude no higher than 1500m (5000 ft) without derating. For additional assistance with high altitude operation, contact an Eaton service representative (see paragraph 1.5 Getting Help).
- The system must be installed in a temperature and humidity controlled indoor area free of conductive contaminants.

**CAUTION**

Do not expose the UPS to overly aggressive environments, like salt mist or corrosive gases. High relative humidity accelerates the effects of contaminants. The UPS should be installed in a G1 environment (based on ANSI/ISA S-71.04 classifications). If the UPS is used in a more aggressive environment, it can cause reduced product life and possibly early failure. If the installation location does not meet the recommended environment, contact Eaton service representative for further information (see paragraph 1.5 Getting Help).

- The environmental requirements specified below are for the air at the intake ports of the 93PM UPS, and are the maximum, not to exceed, ratings.
  - There shall be at least a 1.8°F (1.0°C) difference between the dry bulb temperature and the wet bulb temperature, at all times, to maintain a non-condensing environment.
  - The maximum rate of temperature change shall be limited to 3°F over 5 minutes (36°F/hour), based on the ASHRAE Standard 90.1-2013.
• The newer, more energy efficient data center cooling methods (such as air side economization) can create much wider ranges of temperature and Relative Humidity (RH) in the UPS room and/or data center. There are two aspects of this increased operating environment that can, if ignored, create issues.
  – One is the creation of microclimates, which are persistent variations of temperature and/or RH within a single room. For example one side of the room is always cooler than the other side, no matter the actual temperature.
  – The other aspect is the rate of change of temperature and/or RH, which can occur during transitions within the cooling system. Examples: changing the mixture ratio of inside versus outside air, or external changes in the outside air when going from night to day, and back to night.
  – When ignored, either one of these aspects can create an undesirable microclimate at the UPS location. If the environment created by this microclimate exceeds the UPS operating specification, the UPS reliability, over time, will be reduced. These same environmental extremes will also create reliability concerns for any servers that are exposed to them.

The basic environmental requirements for operation of the UPS are:
• Ambient Temperature Range: 5–40°C (41–104°F)
• Recommended Operating Range: 5–40°C (41–104°F)
• Maximum Relative Humidity: 5–95%, noncondensing

CAUTION

If battery systems are located in the same room as the UPS, the battery manufacturer’s environmental requirements should be followed if they are more stringent than the UPS requirements. Operating temperatures above the recommended range will result in decreased battery life and performance, and may reduce or void the battery warranty.

The UPS ventilation requirements are shown in Table 1. To allow for future power upgrades, Eaton recommends using air conditioning or ventilation sized for the fully rated UPS kW frame size installed instead of the derated kW ordered. Sizing the site cooling infrastructure to be capable of cooling the maximum kW frame size will allow a full power rating upgrade without having to modify the infrastructure.

Table 1. Air Conditioning or Ventilation Requirements During Full Load Operation

For UPS cabinet and Extended Battery Module cabinet dimensions and center of gravity, see Eaton 9355 10/15 kVA UPS User’s Guide.

### 3.3 Parallel UPS System Power Wiring Preparation

Read and understand the following notes while planning and performing the installation:

**WARNING**

As a result of the connected loads high leakage current is possible. Connection to earth ground is required for safety and proper product operation. Do not check UPS operation by any action that includes removal of the earth (ground) connection with loads attached.

- Refer to national and local electrical codes for acceptable external wiring practices.
- For external wiring, use 90°C copper wire.

**IMPORTANT**

This product has been evaluated for use with copper wire only. For external wiring, use only 90°C copper wire.

Wire sizes listed in Table 4 are for copper wiring only. If wire is run in an ambient temperature greater than 40°C, larger size wire may be necessary. Wire sizes are based on using the specified breakers.

- Recommended wire sizes are based on NFPA National Electrical Code® (NEC®)70 Table 310.15(B)(16) 90°C ampacity with 40°C ambient correction factors.
- Input neutral must be wired for proper operation. Failure to connect an input neutral will void the warranty. If the optional input transformer is installed, an input neutral is not required.
- The Eaton 9355 UPS is a single-feed UPS only.

</tbody>
</table>

¹ Use only 90°C-rated copper wire. Minimum wire size is based on 120/208 full load ratings applied to National Electrical Code (NEC) Table 310-104(A). Code may require a larger AWG size than shown in this table because of temperature, number of conductors in the conduit, or long service runs. Follow local requirements.

² Per NEC article 300 20(a) for Ferrous Metal Raceways, all three-phase conductors must be run in the same conduit. Neutral and ground must be run in the same conduit as the phase conductors.

³ Conduit is sized to accommodate one neutral conductor the same size as the phase conductor and one #8 AWG ground conductor. If two neutral conductors or an oversized neutral conductor are to be installed, check the size of the conduit needed to accommodate the extra wire or size and use that conduit size in place of the conduit size listed. Conduit sizes were chosen from NEC Table C1, type letters RHH, RHW, RHW 2, TW, THW, THHW, THW 2.

3.4 Inspecting the Equipment

If any equipment has been damaged during shipment, keep the shipping and packing materials for the carrier or place of purchase and file a claim for shipping damage. If you discover damage after acceptance, file a claim for concealed damage.

To file a claim for shipping damage or concealed damage: 1) File with the carrier within 15 days of receipt of the equipment; 2) Send a copy of the damage claim within 15 days to your service representative.

NOTE  Check the battery recharge date on the packaging label. If the date has expired and the batteries were never recharged, do not use the UPS. Contact your service representative.
Chapter 4  UPS System Installation

4.1  Preliminary Installation Information

WARNING
Installation should be performed only by qualified personnel.

Refer to the following while installing the UPS system:

- Review Chapter 3 UPS Installation Plan and Unpacking, for cabinet dimensions, equipment weight, wiring and terminal data, and installation notes.
- Do not tilt the cabinets more than ±10° during installation.
- Remove conduit landing plates to add conduit landing holes as required.
- If perforated floor tiles are required for ventilation, place them in front of the UPS.

4.2  Unloading the UPS Cabinet from the Pallet

The following tools are required for unloading the cabinet(s):

- 15 mm wrench or socket
- 7 mm nut driver or socket

CAUTION
The UPS and EBM are heavy (see Table 2). Unloading the cabinets requires at least two people to safely remove the cabinets from the pallet.

To unload three-high cabinets or two-high EBMs, proceed to paragraph 4.2.1 Three-High Cabinets or Two-High EBMs. To unload two-high UPS cabinets, proceed to paragraph 4.2.2 Two-High UPS Cabinets.

4.2.1  Three-High Cabinets or Two-High EBMs

To remove a three-high cabinet or a two-high EBM from the shipping pallet:

1. Remove the two M10 bolts securing the stabilizing bracket to the pallet (see Figure 2).
2. Remove the M10 bolts from the two Pallet Brackets securing the leveling feet to the pallet (see Figure 3).

3. Remove the four M4 screws securing the stabilizing bracket to the cabinet rear panel and remove the bracket (see Figure 3). Retain the hardware for later use.

**NOTE** Retain the stabilizing bracket and hardware for later re-assembly onto the cabinet.

4. Remove the front cover from the bottom cabinet to access the front shipping bracket.
   Press and release the handle latch at the bottom of the cover and then lift the cover up and off the cabinet.

5. Remove the three M10 bolts securing the rear shipping pad to the pallet and remove the shipping pad.

**NOTE** Hold the back of the cabinet so that the bolts can be removed easily without the cabinet rolling backward.

6. Remove the two M10 bolts securing the front shipping bracket and remove the bracket.
   If needed, adjust the leveling feet to release the bracket.
7. Reinstall the front cover removed in Step 4. Hang the top edge of the cover on the cabinet first, then lower the bottom edge and snap into place.

**NOTE** Support the front and back of the cabinet when rolling it off the pallet to prevent tipping.

8. Slowly roll the cabinet toward the rear of the pallet. Once the pallet tilts, continue rolling the cabinet down the pallet until the cabinet touches the floor (see Figure 4).

If needed, adjust the leveling feet so that the cabinet rolls freely.
9. With the cabinet supported, slowly pull the pallet away from the cabinet (see Figure 5).

Figure 5. Removing the Pallet

10. Roll the cabinet to the desired location.

4.2.2 Two-High UPS Cabinets

To remove a two-high UPS from the shipping pallet:

1. Remove the M10 bolt securing the vertical bracket to the pallet (see Figure 6).
2. Remove and retain the three M4 screws securing the vertical bracket to the UPS. Remove the vertical bracket.
3. Reinstall the M4 screws to the UPS (see Figure 7).

4. Remove the M10 bolts from the two Pallet Brackets securing the leveling feet to the pallet (see Figure 7).

5. Repeat Step 1 through Step 4 to remove the vertical bracket on the other side.

6. Remove the front cover from the bottom cabinet to access the front shipping bracket.
   Press and release the handle latch at the bottom of the cover and then lift the cover up and off the cabinet.

7. Remove the three M10 bolts securing the rear shipping pad to the pallet and remove the shipping pad (see Figure 8).

NOTE: Hold the back of the cabinet so that the bolts can be removed easily without the cabinet rolling backward.
8. Remove the two M10 bolts securing the front shipping bracket and remove the bracket. 
If needed, adjust the leveling feet to release the bracket.

**Figure 8. Removing the Front Shipping Bracket and Shipping Pad**

9. Reinstall the front cover removed in Step 6.
Hang the top edge of the cover on the cabinet first, then lower the bottom edge and snap into place.

**NOTE** Support the front and back of the cabinet when rolling it off the pallet to prevent tipping.

10. Slowly roll the cabinet toward the rear of the pallet. Once the pallet tilts, continue rolling the cabinet down the pallet until the cabinet touches the floor (see **Figure 9**).
If needed, adjust the leveling feet so that the cabinet rolls freely.
11. With the cabinet supported, slowly pull the pallet away from the cabinet (see Figure 10).

**Figure 10. Removing the Pallet**

12. Roll the cabinet to the desired location.

### 4.3 External AC Power Wiring Installation

You are now ready to install the Eaton 9355 UPS. Select one of the following installation options according to your UPS configuration:

- To install the Version 1 Tie Cabinet, see paragraph **4.3.1 Version 1 Tie Cabinet Parallel Installation**.
- To install the Version 2 Tie Cabinet, see paragraph **4.3.2 Version 2 Tie Cabinet Parallel Installation**.

#### 4.3.1 Version 1 Tie Cabinet Parallel Installation

The Eaton 9355 UPS has the following power connections:

- 3–phase (L1, L2, and L3), neutral, and ground connection for rectifier/bypass input
- 3–phase (L1, L2, and L3), neutral, and ground connection for load output
The nominal input/output voltages are:

- 120/208 or 127/220 Vac

Output overcurrent protection and disconnect switch must be provided by others.

**WARNING**

Only qualified service personnel (such as a licensed electrician) should perform the UPS installation and initial startup. Risk of electrical shock.

To hardwire the parallel system:

1. Verify that the electrical connections to the installation site have been properly installed.
2. A wall-mounted, user-supplied, readily-accessible disconnection device must be incorporated in the input wiring.
   
   Compare the circuit breaker ratings to the ones in Table 4.

3. Switch off utility power to the distribution point where the parallel tie cabinet and UPSs will be connected. Be absolutely sure there is no power.
4. Determine your equipment's grounding requirements according to your local electrical code.
5. Remove the parallel tie cabinet front cover (see Figure 11).

**Figure 11. Version 1 Parallel Tie Cabinet Front Cover**

6. Remove the internal cover to gain access to the breakers (see Figure 12).
7. Punch holes for the conduit (AC input, UPS output, load connection, and maintenance bypass contact wires) using a Greenlee® punch or similar device.

8. Verify that the parallel bypass breaker is in the OFF position (see Figure 13).

9. Mount the parallel tie cabinet to the wall and install the conduit.

10. Verify that each UPS battery circuit breaker is in the OFF position (see Figure 14).

11. From each UPS, remove the UPS wiring access cover and one of the conduit landing plates and retain.
12. Punch two holes in the conduit landing plate for the input and output conduit using a Greenlee punch or similar device.

**Figure 14. UPS Rear View (3-High Shown)**

13. Hardwire the UPS input terminations.

See Table 4 for specifications and Figure 15 for a detailed view of the UPS terminal block.

---

**NOTE 1** Input neutral must be wired for proper operation. Failure to connect an input neutral will void the warranty. If the optional input transformer is installed, an input neutral is not required.

**NOTE 2** The Eaton 9355 UPS is a single-feed UPS only.
14. Hardwire the output terminations from the UPS to the parallel tie cabinet (see Figure 16).

**Figure 15. UPS Terminal Block (3-High Shown)**

![UPS Terminal Block Diagram](image)

15. Hardwire the load to the parallel tie cabinet (see Figure 17).

**Figure 16. Version 1 UPS Output to Parallel Tie Cabinet Wiring**

![UPS Output to Parallel Tie Cabinet Wiring Diagram](image)

16. Wire the maintenance bypass contacts and terminate to the maintenance bypass wires in the parallel tie cabinet (see Figure 15).

Connect the black and the red wire to TB2 on the UPS. Cap the blue wire.

**NOTE** The maintenance bypass contacts are normally-open. To ensure proper bypass operation, **DO NOT** use the blue wire (it is normally-closed).
17. Replace the UPS wiring access cover and conduit landing plate.
18. Repeat Step 12 through Step 17 for each UPS.

**Figure 17. Version 1 Load Connections**

19. Wire the AC input to the bypass breaker (see **Figure 18**).
Figure 18. Version 1 Bypass AC Input Wiring

20. Verify the phase rotation for each UPS and the bypass input.
21. Reinstall the internal cover removed in Step 6.
22. Reinstall the parallel tie cabinet front cover removed in Step 5.
23. Proceed to paragraph 4.3.3 Installing Options to continue the installation process.

4.3.2 Version 2 Tie Cabinet Parallel Installation

The Eaton 9355 UPS has the following power connections:

- 3-phase (L1, L2, and L3), neutral, and ground connection for rectifier/bypass input
- 3-phase (L1, L2, and L3), neutral, and ground connection for load output

The nominal input/output voltages are:

- 120/208 or 127/220 Vac

Output overcurrent protection and disconnect switch must be provided by others.

**WARNING**

Only qualified service personnel (such as a licensed electrician) should perform the UPS installation and initial startup. Risk of electrical shock.

To hardwire the parallel system:

1. Verify that the electrical connections to the installation site have been properly installed.
2. A wall-mounted, user-supplied, readily-accessible disconnection device must be incorporated in the input wiring.
Compare the circuit breaker ratings to the ones in Table 4.

**NOTE**
To accommodate the feature of easy system expandability, it is recommended that initial installation of the Eaton 9355 UPS contain wiring to support the maximum capacity of the UPS cabinet.

3. Switch off utility power to the distribution point where the parallel tie cabinet and UPSs will be connected. Be absolutely sure there is no power.
4. Determine your equipment’s grounding requirements according to your local electrical code.
5. Unfasten the bypass cabinet front door latch and swing the door open (see Figure 19).
6. Follow the instructions on the inside of the door to open or remove the front cover (see Figure 19 and Figure 20).

**Figure 19. Version 2 Parallel Tie Cabinet Front Door and Cover**
7. Remove the internal cover to gain access to the breakers (see Figure 21).
8. Punch holes for the conduit (AC input, UPS output, load connection, and maintenance bypass contact wires) using a Greenlee® punch or similar device.

9. Verify that the parallel bypass breaker is in the OFF position (see Figure 22).

10. Mount the parallel tie cabinet to the wall and install the conduit.
11. Verify that each UPS battery circuit breaker is in the OFF position (see Figure 23).

12. From each UPS, remove the UPS wiring access cover and one of the conduit landing plates and retain.

13. Punch two holes in the conduit landing plate for the input and output conduit using a Greenlee punch or similar device.
14. Hardwire the UPS input terminations. 
   See Table 4 for specifications and Figure 24 for a detailed view of the UPS terminal block.

---

**NOTE 1**
Input neutral must be wired for proper operation. Failure to connect an input neutral will void the warranty. If the optional input transformer is installed, an input neutral is not required.

**NOTE 2**
The Eaton 9355 UPS is a single-feed UPS only.
15. Hardwire the output terminations from the UPS to the parallel tie cabinet (see Figure 25).
16. Hardwire the load to the parallel tie cabinet (see Figure 26).

17. Wire the maintenance bypass contacts and terminate to the maintenance bypass wires in the parallel tie cabinet (see Figure 24). Connect the black and the red wires from the terminal block on the Tie Cabinet to TB2 on the UPS.

**NOTE** The maintenance bypass contacts are normally-open. To ensure proper bypass operation, DO NOT use the blue wire (it is normally-closed).

18. Replace the UPS wiring access cover and conduit landing plate.

19. Repeat Step 13 through Step 18 for each UPS.
20. Wire the AC input to the bypass breaker (see **Figure 27**).
21. Verify the phase rotation for each UPS and the bypass input.
22. Reinstall the internal cover removed in Step 7.
23. Reinstall the parallel tie cabinet front cover removed in Step 5.
24. Proceed to paragraph 4.3.3 Installing Options to continue the installation process.

4.3.3 Installing Options

This section describes the Powerware Hot Sync CAN Bridge Card.

For other options, such as additional X-Slot cards, LanSafe Power Management Software, remote emergency power-off (REPO), relay output contacts, or programmable signal inputs, refer to the Eaton 9355 UPS (10/15 kVA) User’s Guide.

Figure 28 shows the location of the communication options and control terminals on the UPS.
4.3.3.1 Powerware Hot Sync CAN Bridge Card

The Powerware Hot Sync CAN Bridge Card, shown in Figure 29, can be installed to provide connectivity for operational mode control and metering of a parallel system at any UPS in the system.

To install the Powerware Hot Sync CAN Bridge Card:

1. Remove the front covers of all cabinets, starting with the top cabinet.

   Press and release the handle latch at the bottom of each cover and then lift the cover up and off the cabinet (see Figure 30).
2. Strip shielded, four-wire, twisted-pair wire for CAN Bridge Card wiring. Recommended wire size is 18 AWG maximum.

3. Install the CAN Bridge Card wiring between each UPS (see Figure 31). Verify correct polarity for Pins 8 and 9:
   - Connect SHIELD Pin 10 on all cards together.
   - Connect CAN H Pin 9 and CAN L Pin 8 (twisted pair) on all cards together.
   - Connect COM Pin 4 and NC Pin 3 (twisted pair) on all cards together.

4. Wire the factory-installed pull-chain wiring to Signal Input 2 on each UPS and daisy chain the wiring to each UPS as shown in Figure 31. Verify correct polarity:
   - Connect COM Pin 4 to Signal Input 2 Pin 1 on each UPS.
   - Connect NC Pin 3 to Signal Input 2 Pin 2 on each UPS.

**CAUTION**

If polarity or wiring is not correct, the parallel system does not operate normally. For example, when shutting down one UPS, the remaining UPS transfers the load to bypass instead of supporting the load. Verify all CAN Bridge Card wiring is correct for proper operation.

**NOTE**

Signal Input 2 can still be used for building alarms; it is automatically rerouted to the CAN Bridge Card.
5. On the bottom cover (and also the middle cover if 3-high), remove a knockout tab in the top edge of the cover for each cable:

   With wire cutters, cut either side of the tab and twist down to remove the tab (see Figure 32).
6. Route the cable(s) to the approximate location of the cover access holes.

7. Reinstall the front covers, starting with the bottom cabinet (see Figure 33).

   Hang the top edge of the cover on the cabinet first, then lower the bottom edge and snap into place. Verify that the cables fit in the access holes in the covers.

8. Proceed to paragraph 4.3.4 Stabilizing the Cabinet to complete the parallel UPS installation.

   **NOTE** After UPS startup, ensure maximum battery runtime by configuring the UPS for the correct number of EBMs (see paragraph 6.3 Configuring the UPS for EBMs).
4.3.4 Stabilizing the Cabinet

**NOTE 1** For seismic installations, you MUST order and install an Eaton 9355 UPS seismic kit; do not use the following instructions.

**NOTE 2** For non-seismic installations, you MUST install the stabilizing bracket on all 3-high cabinets. The stabilizing bracket is optional for 2-high cabinets.

To stabilize the cabinet(s):
1. Lower the leveling feet to prevent the cabinet from rolling.

Figure 34. Lowering the Leveling Feet

2. Attach the stabilizing bracket to the bottom of the cabinet rear panel using the retained hardware from the shipping pallet according to the cabinet configuration:
   - For one cabinet, see Figure 35.
   - For two cabinets, see Figure 36.
   - For three cabinets, see Figure 37.

**NOTE** No more than three cabinets can be attached together. For four cabinets, use two of the two-cabinet installations. For five cabinets, use one three-cabinet and one two-cabinet installation.

3. Use the holes and slots in the bottom of the bracket to attach the cabinet to the flooring if desired.
4. Continue to one of the following sections:
   - See paragraph 4.4 Extended Battery Module Installation to install optional EBMs.
   - See Chapter 6 Operation to start up the UPS.

**NOTE** After UPS startup, ensure maximum battery runtime by configuring the UPS for the correct number of EBMs (see paragraph 6.3 Configuring the UPS for EBMs).
Figure 35. Stabilizing Bracket with One Cabinet

Figure 36. Stabilizing Bracket with Two Cabinets
4.4 Extended Battery Module Installation

**NOTE 1**  
A maximum of 22 battery strings can be installed in one configuration, including UPS batteries (4 EBM-64 models or 3 EBM-96 models). UPS-32 models contain 2 strings; UPS-64 models contain 4 strings; EBM-64 models contain 4 strings; and EBM-96 models contain 6 strings.

**NOTE 2**  
For non-seismic installations, you MUST install the stabilizing bracket on all 3-high cabinets. The stabilizing bracket is optional for 2-high cabinets.

**NOTE 3**  
In a parallel system, each UPS should have the same number of Extended Battery Modules (EBMs) to ensure equivalent runtimes.

To install the optional EBM:

1. Position the EBM adjacent to the next cabinet.
2. Verify that all battery circuit breakers are in the OFF position (see Figure 38).
3. Remove the two ground straps from the EBM rear panel.
4. Install one ground strap between the UPS and EBM rear panels as shown in Figure 38.
5. If additional EBMs are installed, attach another ground strap between the first and second EBM as shown in Figure 38. Repeat for each additional EBM.
6. Plug the EBM cable into the UPS battery connector.
7. If additional EBMs are installed, plug the EBM cable of the second cabinet into the battery connector on the first EBM. Repeat for each additional EBM.
8. Remove the top front covers of all cabinets.
   Press and release the handle latch at the bottom of the cover and then lift the cover up and off the cabinet.

9. Install the remaining ground straps between each cabinet (see Figure 39).

10. Reinstall the top front covers removed in Step 8.
    Hang the top edge of the cover on the cabinet first, then lower the bottom edge and snap into place.

11. Proceed to Chapter 6 Operation to start up the UPS.

**NOTE** After UPS startup, ensure maximum battery runtime by configuring the UPS for the correct number of EBMs (see paragraph 6.3 Configuring the UPS for EBMs).

Chapter 6 Operation

This chapter contains information on how to use the Eaton 9355 UPS, including front panel operation, UPS startup and shutdown, and configuring the UPS for Extended Battery Modules (EBMs).

6.1 Control Panel Functions

The UPS has a four-button graphical LCD with backlight. It provides useful information about the UPS itself, load status, events, measurements, and settings (see Figure 45).

Figure 45. Eaton 9355 UPS Control Panel

The following table shows the indicator status and description.

6.1.1 Changing the Language

Press and hold the first button on the left for approximately five seconds to select the language menu. This action is possible from any LCD menu screen.

6.1.2 Display Functions

As the default or after 15 minutes of inactivity, the LCD displays the selectable startup screen. The default is the Eaton logo and can be changed to the Mimic screen in the User Settings menu.
The backlit LCD automatically dims after a long period of inactivity. Press any button to restore the screen.

Use the two middle buttons (↑ and ↓) to scroll through the menu structure. Press the → button to enter a submenu. Press the ← button to select an option. Press the Esc button to cancel or return to the previous menu.

The following table shows the basic menu structure.

### 6.2 Initial Startup

Startup and operational checks must be performed by an authorized Eaton Customer Service Engineer, or the warranty terms specified on the product’s resources page become void. See Chapter 8 Warranty for details. This service is offered as part of the sales contract for the UPS. Contact an Eaton service representative in advance (a minimum two-week notice is required) to reserve a preferred startup date.

**WARNING**

Only qualified service personnel (such as a licensed electrician) should perform the UPS installation. Initial startup must be performed by an authorized Eaton Customer Service Engineer. Risk of electrical shock.
### 6.2.1 Parallel UPS Startup

**WARNING**

Only qualified service personnel (such as a licensed electrician) should perform the UPS installation. Initial startup must be performed by an authorized Eaton Customer Service Engineer. Risk of electrical shock.

Verify that UPS installation has been carried out correctly and the UPS ground has been connected.

**NOTE**

In a parallel capacity system (2+0 or 2+1), determine the minimum number of UPSs required for capacity.

To start up the parallel system (Initial Startup or from complete System power off):

1. Verify that all UPS breakers on the parallel tie cabinet are in the OFF position.
2. Switch ON the utility power where the UPSs are connected.
3. Wait for the front panel LCD to illuminate.
   
   The \(\mathcal{D}\) indicator flashes on each UPS.
4. Verify fans have started.
5. Switch all battery circuit breakers to the ON position.
   
   The \(\mathcal{D}\) indicator stops flashing on each UPS.
6. Configure the UPS for parallel operation through the front panel:
   
   - Press any button on the front panel display to activate the menu options.
   
   - Using the \(\uparrow\) button, scroll to the Settings menu, and then press the \(\rightarrow\) button twice to select the User Settings menu.
   
   - Use the \(\downarrow\) button to scroll to the Parallel Operation Mode option and press the \(\leftarrow\) button to enter the menu.
   
   - Use the \(\downarrow\) button to scroll the desired option (either Redundant Mode or Capacity Mode).
   
   - Press the \(\leftarrow\) button to save the setting.
7. Press the \(\text{ESC}\) button until the Eaton\textsuperscript{®} logo or Mimics screen appears.
8. Repeat Steps 6 and 7 for the remaining UPSs in the parallel system.
9. Shut down each UPS:
   
   - Switch the UPS battery circuit breaker to the OFF position.
     
     The UPS is disconnected from the batteries and is on logic power only.
10. Cycle the utility power to the distribution point where the parallel tie cabinet and UPSs are connected. Wait until the LCD is off before reapplying utility power.
11. Switch the UPS breakers on the parallel tie cabinet to the ON position.
12. Switch all battery circuit breakers to the ON position.
13. Verify that no alarms appear on the UPS front panel display.

   If the ♂ indicator is flashing, do not proceed until all alarms are clear. Check the UPS status from the front panel to view the active alarms. Correct the alarms and restart if necessary.

14. Verify the phase rotation for each UPS.

15. From the UPS Status menu, select the Units on CAN Bus option and verify that all UPSs appear in the list.

   If all UPSs appear in the list, press the Esc button until the Eaton logo or Mimic screen appears.

   If any UPS is missing, verify the Powerware Hot Sync CAN Bridge Card connections and recheck the status from the UPS front panel.

16. Press the ↗ button on the front panel display and then press the ➔ button to select the TURN UPS ON/OFF menu.

17. Select the System On option; press and hold the ← button for three seconds, until the UPS stops beeping.

   The UPS goes to Bypass mode for five seconds, and then the ☼ indicator illuminates. Each UPS should be in Normal mode.

18. Press the Esc button until the Eaton logo or Mimic screen appears.

### 6.3 Configuring the UPS for EBMs

**NOTE** Each UPS in a parallel system must have its own EBM and the same number of EBMs to ensure consistent runtimes.

To ensure maximum battery runtime, configure the UPS for the correct number of EBMs:

1. Press any button on the front panel display to activate the menu options.

2. Using the ↑ button, scroll to the Settings menu.

3. Press the ➔ button twice to select the User Settings menu.

4. Using the ↓ button, scroll to the Battery Setup option and press the ➔ button.

5. Use the ↑ or ↓ buttons to select the number of strings according to your UPS configuration:

<table>
<thead>
<tr>
<th>All 2-High UPS and EBM Cabinets*</th>
<th>Number of Strings</th>
</tr>
</thead>
<tbody>
<tr>
<td>UPS + 1 EBM</td>
<td>6</td>
</tr>
<tr>
<td>UPS + 2 EBMs</td>
<td>10</td>
</tr>
<tr>
<td>UPS + 3 EBMs</td>
<td>14</td>
</tr>
<tr>
<td>UPS + 4 EBMs</td>
<td>18</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>All 3-High UPS and EBM Cabinets*</th>
<th>Number of Strings</th>
</tr>
</thead>
<tbody>
<tr>
<td>UPS + 1 EBM</td>
<td>10</td>
</tr>
<tr>
<td>UPS + 2 EBMs</td>
<td>16</td>
</tr>
</tbody>
</table>
6. Press the ← button to save the setting.

7. Press the ESC button until the Eaton logo or Mimic screen appears.

### 6.4 Parallel System Shutdown

To remove power to the parallel UPS system output:

1. Press any button on the front panel display to activate the menu options.

2. Press the ↑ button on the front panel display and then press the → button to select the TURN UPS ON/OFF menu.

3. Press the ↓ button to select the System Off option; press and hold the ← button for three seconds, until the UPS stops beeping.

4. Repeat Step 3.
   - The input contactor opens.
   - The UPS removes power to the parallel UPS system output.

5. Press the ESC button until the Eaton logo or Mimic screen appears.

6. Repeat Steps 1 through Step 5 for each UPS in the Parallel System.

7. Switch each of the UPS breakers on the parallel tie cabinet to the OFF position.

8. Switch all battery circuit breakers to the OFF position.

9. Switch OFF the utility power to the Parallel UPS system.

### 6.5 Individual UPS Shutdown

To shut down a single UPS in the parallel system:

1. Press any button on the front panel display to activate the menu options.

2. Press the ↑ button on the front panel display and then press the → button to select the TURN UPS ON/OFF menu.

3. Press the ↓ button to select the System Off option; press and hold the ← button for three seconds, until the UPS stops beeping.

4. Repeat Step 3.
   - The input contactor opens.

5. Switch the UPS battery circuit breaker to the OFF position.
   - The UPS is disconnected from the batteries and is on logic power only.

6. Switch the UPS breaker on the parallel tie cabinet to the OFF position.

---

<table>
<thead>
<tr>
<th>All 2-High UPS and EBM Cabinets*</th>
<th>Number of Strings</th>
</tr>
</thead>
<tbody>
<tr>
<td>UPS + 3 EBMs</td>
<td>22</td>
</tr>
</tbody>
</table>

*UPS-32 models contain 2 strings; EBM-64 models contain 4 strings.

UPS-64 models contain 4 strings; EBM-96 models contain 6 strings.
7. Switch OFF the utility power where the UPS is connected.

**NOTE** If you are shutting down all the UPSs in a parallel system, repeat Steps 2 through 6 for each UPS then remove utility power.

### 6.6 Restarting the Parallel System

To restart the parallel system:

1. Verify that all UPS breakers on the parallel tie cabinet are in the OFF position.
2. Switch ON the utility power where the UPSs are connected.
3. Wait for the front panel LCD to illuminate.

   The $\Delta$ indicator flashes on each UPS.
4. Switch all battery circuit breakers to the ON position.

   The $\Delta$ indicator stops flashing on each UPS.
5. Switch the UPS breakers on the parallel tie cabinet to the ON position.
6. Verify that no alarms appear on the UPS front panel display.

   If the $\Delta$ indicator is flashing, do not proceed until all alarms are clear. Check the UPS status from the front panel to view the active alarms. Correct the alarms and restart if necessary.
7. Press the **ESC** button once and then press the $\rightarrow$ button to select the TURN UPS ON/OFF menu.
8. Press the $\downarrow$ button to select the System On option; press and hold the $\leftarrow$ button for three seconds, until the UPS stops beeping.

   The UPS goes to Bypass mode for five seconds, and then the $\sim$ indicator illuminates. Each UPS should be in Normal mode.
9. Press the **ESC** button until the Eaton® logo or Mimic screens appears.

### 6.7 Parallel Bypass Operation

To switch the parallel UPS from Normal mode to maintenance bypass:

1. From any UPS, set the system to internal Bypass mode:
   - Using the $\uparrow$ button on the front panel display, scroll to the Control menu option and press the $\rightarrow$ button.
   - Press the $\leftarrow$ button to select the Go to Bypass Mode option.

   The $\sim$ indicator illuminates and the $\triangleright$ indicator extinguishes, indicating the UPS system is operating in Bypass mode.
2. Switch the bypass breaker (may be designated MBP or CBP) in the parallel tie cabinet to the ON position.
3. If present, switch the maintenance isolation breaker (MIS) on the parallel tie cabinet to the OFF position; otherwise, switch the UPS breakers (may be designated MOB or UPS) on the parallel tie cabinet to the OFF position.

**To return to Normal Mode from maintenance bypass:**

1. Verify that the maintenance isolation breaker (if present) on the Tie Cabinet is in the OFF position or all of the UPS breakers are in the OFF position.

2. Switch on utility power where the UPSs are connected.

In a parallel capacity system (N+0 or N+1), apply utility to the minimum number of UPSs required for capacity.

   - The _indicator illuminates, indicating the UPS system is operating in Bypass mode.
   - The display indicates On Manual/Maintenance Bypass.

3. Verify voltage is present on the UPS output by checking that an output voltage reading present on the front panel LCD display.

   - The load is now powered by utility power.

4. If present, switch the maintenance isolation breaker (MIS) on the wall-mounted bypass cabinet to the ON position; otherwise, switch the UPS breakers (may be designated MOB or UPS) on the wall-mounted bypass cabinet to the ON position.

5. Switch the bypass breaker (may be designated MBP or CBP) in the wall-mounted bypass cabinet to the OFF position.

   - The UPS is now powering the load in Bypass mode.

**NOTE**

Use the same UPS that was used to set internal bypass to return the parallel system to Normal mode.

6. On the same UPS front panel, set the UPS to Normal mode:
   - Press the _button to select the Go to Normal Mode option.
   - Each UPS goes to Normal mode.

   The UPS is now powering the load in Normal mode.
Operation
Chapter 7 Troubleshooting

The Eaton 9355 UPS is designed for durable, automatic operation and also alerts you whenever potential operating problems may occur. Usually the alarms shown by the control panel do not mean that the output power is affected. Instead, they are preventive alarms intended to alert the user. Use the following troubleshooting chart to determine the UPS alarm condition.

7.1 Typical Alarms and Conditions

The following table describes typical alarms and conditions; check the Event Log through the control panel for a list of active alarms. If an alarm appears with a service code, please contact the Help Desk (see 1.5 Getting Help).

<table>
<thead>
<tr>
<th>Alarm or Condition</th>
<th>Possible Cause</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>On Battery</td>
<td>A utility failure has occurred and the UPS is in Battery mode.</td>
<td>The UPS is powering the equipment with battery power. Prepare your equipment for shutdown.</td>
</tr>
<tr>
<td>Battery Low</td>
<td>The battery is running low.</td>
<td>Five minutes or less of battery power remains (depending on load configuration and battery charge). Save your work and turn off your equipment. When utility power is restored, the UPS restarts automatically, provides power to the load, and charges the battery.</td>
</tr>
<tr>
<td>Battery Breaker</td>
<td>The UPS does not recognize the internal batteries.</td>
<td>Verify the battery circuit breaker is in the ON position. If the condition persists, contact your service representative.</td>
</tr>
<tr>
<td>Overload</td>
<td>Power requirements exceed the UPS capacity (greater than 100% of nominal).</td>
<td>Remove some of the equipment from the UPS. The UPS continues to operate, but may switch to Bypass mode if the load increases. The alarm resets when the condition becomes inactive.</td>
</tr>
<tr>
<td>Overtemperature</td>
<td>UPS internal temperature is too high or the fan has failed.</td>
<td>Turn the maintenance bypass switch to the SERVICE position. Otherwise, shut down the UPS. Clear vents and remove any heat sources. Allow the UPS to cool. Ensure the airflow around the UPS is not restricted. If the alarm disappears, turn the maintenance bypass switch back to the UPS position. If the condition persists, contact your service representative.</td>
</tr>
<tr>
<td>Battery test failed</td>
<td>The batteries need service.</td>
<td>Contact your service representative.</td>
</tr>
<tr>
<td>The UPS does not start.</td>
<td>The main utility breaker is off.</td>
<td>Verify that the main utility breaker is on. If an optional isolation transformer is installed, the input circuit breaker is off.</td>
</tr>
</tbody>
</table>
Troubleshooting

<table>
<thead>
<tr>
<th>Alarm or Condition</th>
<th>Possible Cause</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power is not available at the UPS output receptacles.</td>
<td>The UPS is in Standby mode.</td>
<td>Supply power to the connected equipment: Press any button on the front panel display to activate the menu options. Press the button on the front panel display and then press the button to select the TURN UPS ON/OFF menu. Press the button to select the System On option; press the button. Press and hold the button for three seconds, until the UPS stops beeping.</td>
</tr>
<tr>
<td>The UPS does not provide the expected backup time.</td>
<td>The batteries need charging or service.</td>
<td>Apply utility power for 48 hours to charge the batteries. If the condition persists, contact your service representative.</td>
</tr>
<tr>
<td>Battery circuit breakers are in the OFF position.</td>
<td>Battery circuit breakers are in the OFF position.</td>
<td>Switch all battery circuit breakers to the ON position.</td>
</tr>
<tr>
<td>Check Parallel Board</td>
<td>The UPS is not recognizing another parallel unit.</td>
<td>From the UPS Status menu, select the Units on CAN Bus option and verify that all UPSs appear in the list. If any UPS is missing, verify the Powerware Hot Sync® CAN Bridge Card connections and recheck the status from the UPS front panel. If all UPSs appear in the list, check the pull-chain wiring (see Figure 29). Set the system to internal Bypass mode (see paragraph 6.7 Parallel Bypass Operation). If the condition persists, contact your service representative.</td>
</tr>
<tr>
<td>Abnormal output voltage at startup</td>
<td>The UPS breaker on the parallel tie cabinet was not switched to the ON position properly.</td>
<td>Shut down the UPS where the alarm is indicated. Switch the UPS breaker on the parallel tie cabinet to the ON position. Start up the UPS. Select the System On option through the front panel of the UPS that was turned off.</td>
</tr>
<tr>
<td>Selective Trip</td>
<td>The Powerware Hot Sync® CAN Bridge Card is not wired correctly.</td>
<td>Verify the CAN wiring (see Figure 31). Verify the pull-chain wiring (see Figure 31). If the condition persists, contact your service representative.</td>
</tr>
</tbody>
</table>

### 7.2 Silencing the Alarm

Before silencing an alarm, check the alarm condition and perform the applicable action to resolve the condition. Press any button on the front panel display to silence the alarm. If the alarm status changes, the alarm beeps again, overriding the previous alarm silencing.
