

Protect all your home Electronics and Appliances
with Eaton's **Complete Home Surge Protection.**

Our homes are filled with sensitive electronics. These devices are easily damaged by common power surges in your electrical, telephone, and cable lines. It only takes a lightning storm near your home to create a high-energy electrical surge that can enter your house and destroy your appliances, TVs, stereo equipment and almost all other modern electrical products.

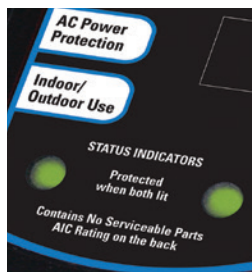

Your Home Could be at Risk

As a homeowner you have spent thousands of dollars on products that rely on electronics. Catastrophic damage can result from a nearby lightning strike; however it is often the repetitive small surges that end up destroying your electronics over time. It is estimated that over 80% of the surges are actually generated from inside the home.

Many people have already taken the first step towards protecting a few of their electronics by using surge strips. However, to provide complete protection for all your electronics and appliances, surge protection must be installed at the breaker box.

Protect Your Investments.

Peace of Mind. Indicating lights let you know the product is working.

Easy. Installation is simple and is compatible with any manufacturer's breaker box.

Flexibility. Surge protection plus a functional 2 pole circuit breaker.

Safe & Reliable. Tested and approved to the highest industry standard.

How much can you afford to lose?

Don't limit your protection to only a surge strip, protect the entire home.
