The power to work

Power conditioning products

Electronic voltage regulator
Power-Sure 700 & 800
Power-Suppress 100 & 600

Harmonic correction unit
Sag ride-through power conditioner

EATON
Powering Business Worldwide
Basics of power quality

The PQ Pyramid™
The key elements of an effective PQ strategy:

Interruption solutions
• Reduce problems associated with outages using UPS, paralleling switchgear, generators and/or energy storage devices

Harmonic mitigation
• Many applications require solutions to reduce harmonic current and voltage distortion

Voltage regulation
• Stabilizes a facility’s voltage and eliminates costly problems due to undervoltage and overvoltage events

Surge protection
• Eliminates problems associated with transients traveling on ac, telephone and communication lines

Effective grounding
• A well-designed and properly installed grounding system is required for safety and operation of all electrical equipment

Utilities struggle to keep up with the unrelenting demand for clean power…you can’t rely solely on them to provide it. The responsibility for PQ rests with the customer—including you.

With Eaton behind you, your company’s operations managers and facility engineers can be assured that their power supply will get the job done, no matter what level of reliability your company requires.

You wouldn’t use anything other than 100 percent clean gas in your car, or pure oil in your engine. The same rules apply to your electrical equipment. Without an investment in the quality of power running this equipment, you can expect downtime and equipment disruption.
A total solution

The right power quality solution is site and industry specific. Power quality meters are required to help you capture and analyze your facility’s power disturbances. If you can’t measure it, you can’t manage it.

A power quality engineer can help companies interpret data and identify the most cost-effective solutions. With today’s increasingly complex facilities and interconnected networks, the number of problems that can result from poor power quality are significant. Eaton power system engineers are PQ experts who can help you realize the full benefits of your investment.

Armed with this information, you can select the Eaton products that are right for you.
Solutions to all of your power quality needs

An investment in Eaton power quality (PQ) solutions is one that will pay dividends immediately. It keeps your equipment, and your company, working. That means you avoid costly downtime.

We’ll help you protect your investment in an increasingly digital world.

Overview

Eaton offers a wide range of power conditioning solutions. These solutions range from small single-phase isolation units to megawatt sag correction units. Eaton has the engineering expertise and products to solve your power quality problem.

Protects equipment from:
• Voltage sags
• Line noise
• Voltage transients/surges
• Under/overvoltage events
• Swells
• Harmonics

Ratings
• 500 VA to 50 MVA
• 50/60 Hz
• Voltage 120 V to 36 kV
• Single-phase and three-phase
### Power conditioning product selection chart

Eaton power conditioning products are designed to protect your critical equipment against common power quality problems.

Power conditioning voltage regulators

**Power-Sure 700—three-phase**
- Ratings from 10 kVA to 500 kVA
- Voltage from 208 V to 600 V
- Seven taps per phase for optimal regulation
- Response time of 1/2 cycle
- Output correction within 1.5 cycles
- ±3% voltage output for a +10% to –23% voltage input
- Less than 1% THD
- Unit not affected by load power factor
- High efficiency of approximately 97%
- Frequency range of 57–63 Hz
- Bypass switch (optional on 45 kVA and smaller units)
- Triple-shielded isolation transformer
- Overtemperature protection
- Optional surge protection unit
- Optional metering
- Front access only for 50–150 kVA units
- One-year warranty

**Power-Sure 800—single-phase**
- Ratings from 500 VA to 25 kVA
- Voltage range from 120 V to 480 V
- Office models (with receptacles)
- Hardwired models (wall/panel mount and floor mount)
- Line regulation ±3% V-out for +10% to –20% V-in at 100% load
- Load regulation ±3% for 0–75% load to ±2% for 100% load
- Immunity to distortion at 40% THD V-in, 5% max. THD V-out
- Ride-through capability of 1 cycle
- Voltage recovery of 2 cycles to 95%, 3 cycles to 100%
- K-30 rated K-factor
- Harmonic attenuation of –23 dB for load-reflected harmonics
- Surge protection of 330 V let-through voltage
- Common mode noise attenuation of 140 dB
- Transverse mode noise attenuation of 120 dB
- Reliability of 200,000 hours (MTBF)
- Audible noise of 52–56 dB at 1 meter
- Efficiency of 92% at full load
- Operating temperature of –20 °C to +40 °C
- Two-year warranty

**Sag ride-through power conditioner (SRT2)**
- Up to 30 seconds of voltage sag ride-through
- 99% efficient (typical)
- Does not lower fault capacity
- Continuous voltage regulation
- Voltage harmonic reduction
- Voltage balance correction
- Extensive diagnostics
- Voltage event log
- Separate coupling transformer
- Continuous sag correction survives multiple sag events without recharging capacitors for extra time savings
- Small design and footprint significantly reduces required floor space
- Battery-free design eliminates costly maintenance and disposal requirements
- No minimum load improves operating flexibility for fluctuating loads or processes
- Sub-cycle response patented circuit enables extremely fast 2 ms response (1/8 cycle)

**EATON Power conditioning products**
### Power-Suppress 100 — Single-phase
- Traps unwanted harmonics
- Sizes from 500 VA to 7.5 kVA
- Voltages from 120 V to 480 V
- Common mode noise attenuation of 140 dB at 100 kHz
- Normal mode noise attenuation of 65 dB at 100 kHz
- Overload capacity of 600% for 1 cycle, 300% for 30 seconds
- Frequency of 60 Hz ±5%
- Efficiency of 93–97%
- Adds less than 1% THD under linear loading
- Temperature rise 115 °C above a 40 °C ambient
- Removes surge voltages and minimizes reflected THD
- Cleans and conditions the sine wave
- Eliminates load-generated feedback
- Available in both hardwired or line cord/receptacle models
- Fast and easy installation
- Long-life operation
- Small footprint
- Two-year warranty

### Power-Suppress 600 — Isolation Transformer
- Common mode noise attenuation:
  - 126 dB—standard double (2) shield
  - 146 dB—optional triple (3) shield
- Transverse mode noise attenuation:
  - 3 dB down at 10 kHz, decaying 20 dB per decade
  - Decaying 40 dB with “SPD With High Frequency” option
- Overload capacity up to 500% for 10 seconds, 1000% for 1 cycle
- K-13 rated
- Overtemperature protection
- Clean, noise-free power output
- Fast, easy installation
- Optional UL® 1449 4th Edition and UL 1283 7th Type 2 surge suppressor
- UL and cUL® listed requirements
- Frequency of 60 Hz ±5%
- Efficiency:
  - Meets and exceeds U.S. Department of Energy (DOE) 2016 high efficiency standards identified under DOE 10 CFR Part 431
  - Meets and exceeds CSA Standard C802.2-12
- Output impedance 2% to 3.5% typical
- Output distortion less than 1.0% THD added under linear load
- The isolated neutral establishes a new neutral to ground bond on the transformer’s output
- Protects loads from voltage and current distortions caused from triplen harmonics (3rd, 9th, 15th, 21st, etc.)
- One-year warranty

### Harmonic Correction Unit
- Can be sized to guarantee specific levels of harmonic correction, such as meeting IEEE® 519 recommended levels
- Cannot be overloaded
- Can be expanded without affecting performance
- Broad spectrum of cancellation (2nd to 51st harmonic)
- Power factor improvement
- Easier and less expensive installation
- Comprehensive control
- Fast action
- 20 kHz switching carrier frequency, 25 μs full response time
- UL/CSA® approved
- 380–480 V ±10%, 600 V and 690 V with autotransformer
- 50/60 Hz ±3 Hz frequency
- Ambient temperature 0 °C to +40 °C enclosed
- Seismic Zone 4
- NEMA 1, NEMA 2, NEMA 12, IP31, IP54 and chassis-mount versions available:
  - Wallmount (NEMA 1 designs)
  - Floor-standing (NEMA 2, NEMA 12, IP31 and IP54)
- Output capacity—self-limited to 100% current rated
- Corrective capability—<5% TDD and near unity displacement power factor
- Color HMI touchscreen display
- Efficiency: losses at 480 V <3%; losses at 690 V <5%
- Closed loop control

 Requires at least 3% series input line reactor ahead of large nonlinear loads.
At Eaton, we believe that power is a fundamental part of just about everything people do. Technology, transportation, energy and infrastructure—these are things the world relies on every day. That’s why Eaton is dedicated to helping our customers find new ways to manage electrical, hydraulic and mechanical power more efficiently, safely and sustainably. To improve people’s lives, the communities where we live and work, and the planet our future generations depend upon. Because that’s what really matters. And we’re here to make sure it works.
