

## Eaton partners with best-in-class lock manufacturer Fath Mechatronics to deliver TANlock for rack enclosures

Jun. 19, 2020

[TANlock by Eaton](#), available now through a partnership with Fath Mechatronics, is the ideal modular access control system for IT rack enclosures. With two smart lock models and seven different authentication technologies available, TANlock by Eaton provides options to effectively secure your rack enclosures. TANlock models come with all required hardware for mounting to an Eaton enclosure or the universal cutout enclosure door of your choosing.

With Eaton [Visual Power Manager \(VPM\)](#) and [Visual Capacity Optimization Manager \(VCOM\)](#) power management solutions, TANlock by Eaton can be utilized to bolster security of your IT enclosures via simplified remote management, status logging and access controls down to the individual rack level. TANlock's auto-discovery features make for a simplified network setup, while lock status indicators and alarms provide instant notification of rack level access.

### **Key benefits and features include:**

#### **Save time**

- Get up and running quickly with active directory, LDAP and RESTful API support

#### **Save money**

- Use your existing rack by retrofitting to any enclosure with standard universal door cutouts
- Modular design allows you to update access requirements as site requirements change without replacing the lock

#### **Reduce risk**

- Keep unwanted guests out of your enclosure with two-factor authentication options
- Monitor and manage access credential logins to provide access to specific individuals

### **Available resources**
