Introduction
This manual describes how to install a CVX050 or CVX100 surge protective device (SPD) in parallel (shunt) across the electrical supply of the following types of electrical systems:
- Single-phase
- Split-phase
- Three-phase wye (star)
- Three-phase delta (no neutral)
- Direct current (DC)

The SPD is designed to be installed on service entrance, branch panels, and/or individual equipment disconnects, and functions to protect sensitive electronic equipment from damaging voltage transients. The connecting wires do not carry supply current. Instead, they carry only short-duration currents that are associated with a transient event.

These instructions do not cover all details, variations, or combinations of the equipment, its storage, delivery, installation, checkout, safe operation, or maintenance. If you require further information regarding a particular application or installation that is not covered in this manual, please contact Eaton’s Power Quality Technical Support at 1-800-809-2772.

Safety precautions
A licensed/qualified electrician must complete all instructions described in this manual in accordance with the U.S. National Electrical Code®, state and local codes, or other applicable country codes. All electrical codes supersede these instructions.

⚠️ WARNING
IMPROPER INSTALLATION CAN CAUSE DEATH, INJURY, AND/OR EQUIPMENT DAMAGE. FOLLOW ALL WARNINGS AND CAUTIONS. COMPLETELY READ AND UNDERSTAND THE INFORMATION IN THIS INSTRUCTION MANUAL BEFORE ATTEMPTING TO INSTALL OR OPERATE THIS EQUIPMENT.

IMPROPER WIRING COULD CAUSE DEATH, INJURY, AND/OR EQUIPMENT DAMAGE. ONLY LICENSED/QUALIFIED ELECTRICIANS WHO ARE TRAINED IN THE INSTALLATION AND SERVICE OF ELECTRICAL DEVICES ARE TO INSTALL THIS EQUIPMENT.

USE APPROPRIATE SAFETY PRECAUTIONS AND EQUIPMENT FOR ARC FLASH PROTECTION.

DURING NORMAL OPERATION, HAZARDOUS VOLTAGES ARE PRESENT INSIDE THE SPD.

WHEN INSTALLING THE SPD, FOLLOW ALL SAFE WORK PRACTICES TO AVOID ELECTRICAL SHOCK.

⚠️ CAUTION
DO NOT PERFORM A HIGH-POT TEST WITH THE SPD CONNECTED TO THE ELECTRICAL SYSTEM. FAILURE TO DISCONNECT THE SPD DURING A HIGH-POT TEST WILL RESULT IN DAMAGE TO THE SPD.

AFTER INSTALLATION, THIS DEVICE IS NOT REPAIRABLE AND CONTAINS NO SERVICEABLE PARTS. IF THE UNIT SHOULD MALFUNCTION OR NEEDS TO BE REPLACED, CONTACT A QUALIFIED ELECTRICIAN OR EATON CARE AT 877-ETN-CARE (877-386-2273).
Conduit installation
Mount the SPD directly to the electrical panel using a 3/4-inch chase nipple as shown in Figure 1.
When mounting the SPD outdoors, use weatherproof conduit and fittings to maintain the enclosure's NEMA® 4X rating. See Figure 2.

1. Number and type of wires vary with SPD model. Refer to SPD wiring diagrams.

Wall mounting
Mount the SPD directly on a wall using the SPD’s internal mounting holes as follows:
1. Gain access to the internal mounting holes by first removing the SPD’s four front cover screws, and then removing the front cover. See Figure 3.
2. Place the SPD against the wall and mark the locations of the four mounting holes.
3. Attach the SPD to the wall using #8 hardware.
4. Reinstall the front cover.

![Figure 1. 3/4-inch chase nipple mounting](image1)

![Figure 2. Conduit installation](image2)

![Figure 3. Wall mounting using internal mounting holes](image3)
External mounting feet (optional)

Optional external mounting feet with screws (catalog number MNTGFTX) can be used to mount the SPD to a wall without removing the front cover as shown in Figure 4.

Figure 4. Wall mounting using external mounting feet

Flush mount plate (optional)

Optional flush mounting plate (catalog number FLUSHMNTPLATE12) can be used when mounting the SPD flush with a wall.

Figure 5. Optional flush mount plate

Wiring for AC units

IMPORTANT

BE SURE TO FOLLOW ALL NATIONAL, STATE, AND LOCAL ELECTRICAL CODES WHEN MAKING WIRING CONNECTIONS.

WHEN CONNECTING THE WIRES FROM THE SPD TO THE ELECTRICAL SYSTEM, CUT THE WIRES AS NECESSARY TO KEEP THEM AS SHORT AS POSSIBLE.

TO MAXIMIZE THE SPD’S PERFORMANCE, TWIST AND BIND THE WIRES TOGETHER TO REDUCE THE IMPEDANCE OF THE WIRE (ONE TWIST/INCH).

IF THE SYSTEM UTILIZES AN ISOLATED GROUND, THE SPD’S GROUND WIRE MUST BE CONNECTED TO THE SYSTEM’S ISOLATED GROUND BUS.

1. Locate the electrical system’s applicable wiring diagram in Figure 6 through Figure 11. Reference this wiring diagram as necessary in Steps 2, 3, and 4.
2. Connect the SPD’s ground wire (green) to the system’s ground connection.
3. Connect the SPD’s neutral wire (white) to the system’s neutral connection (not required for three-phase delta systems—240D, 480D, 600D).
4. Connect the SPD’s phase A, B, and C wires (black) to the system’s corresponding phase A, B, and C connections according to applicable national, state, and local electrical codes.

Figure 10. Three-phase delta (no neutral) (240D, 480D, 600D)

Figure 11. Single-phase 120 V (240S)
Before installation as SPD

Step A
Verify system voltage does not exceed maximum suggested operating voltage listed in table.
- All voltage measurements should be completed with a DC voltmeter
- Do not install suppressor if measured voltage exceeds maximum suggested operating limits

<table>
<thead>
<tr>
<th>Model number</th>
<th>Line-to-line</th>
<th>Line-to-ground</th>
<th>(+/-) Wire color</th>
<th>Ground wire color</th>
</tr>

<td>65</td>
<td>Black</td>
<td>Green</td>
</tr>
<tr>
<td>CVX100-125DC</td>
<td>288</td>
<td>144</td>
<td>Black</td>
<td>Green</td>
</tr>
</tbody>
</table>

Step B
Choose suppressor installation location so leads are kept as short and straight as possible. **Suppressor must be connected to electrical system via one of the following circuit interrupt devices:**
- 1–two-pole/single-throw 30 A circuit breaker

**Note:** Pre-existing breakers of rated load size may be utilized if provisions for multi-conductor connections are made according to NEC 110.14A.
- 2–single-pole/single-throw 30 A circuit breakers
- 2–30 A Class RK5 fuse(s) (such as Bussmann FRN-R-30 for less than 125 Vdc)

**Note:** For isolated ground, suppressor GROUND wire is bonded to shell internally. If system utilizes isolated ground, then suppressor shell must be isolated from ground via insulated conduit fitting and ground wire must be connected to isolated ground bus.

---

**WARNING**

COVER WILL NOT SEAL WHEN ROTATED ONLY 90 DEGREES. THIS INVALIDATES NEMA 4 RATING AND MAY CREATE SAFETY HAZARD.
Step 3
Wire suppressor into electrical system:
• Cut wire(s) as short as possible for optimum suppressor performance
• Connect GROUND (green) wire to system ground busbar. Refer to NOTE for systems utilizing isolated ground
• Connect black wire(s) to “+” and “−” (no polarity required)

Step 4
Apply power to system. Indicator light should glow. If light does not glow, remove power and contact supplier.

Installation instructions as secondary surge arrester

Step 1
Follow Steps 1 through 4 above, only circuit interrupt device not required.

Operation

Power up and system checkout
Apply system power. One LED should light for each phase voltage being monitored (see Figure 13). Single-phase electrical systems will light only one LED, split-phase systems light two LEDs, while three-phase systems light all three.

If the connected LEDs do not light, remove power, check connections, and test again. If the LEDs still do not light, contact your supplier.

Routine operation
After system power has been applied, the SPD automatically begins to protect downstream electrical devices from damaging voltage transients and surges.

With all phase voltages present, if an LED turns OFF, the SPD has disconnected itself from that phase of the electrical system because one of its thermally protected MOVs has failed. If a thermally protected MOV fails, power will be maintained to the load; however, the load is now unprotected.

The CVX050/100 is not repairable and contains no user serviceable parts. If the unit fails, as shown by at least one of the LEDs turning OFF, the unit must be replaced. Please contact your distributor as the SPD may be under warranty.

⚠️ WARNING
DO NOT USE THE SUPPRESSION CIRCUIT STATUS LEDS AS AN INDICATION OF THE PRESENCE OR ABSENCE OF SYSTEM PHASE VOLTAGES.

One LED per phase
LEDs that light indicate MOVs for that phase are operational
An LED that turns OFF indicates a failed MOV or loss of power

Figure 13. Suppression circuit status LEDs
Warranty

Eaton warrants these products for a period of 5 years from the date of delivery to the purchaser. To register visit www.eaton.com/spd and click the warranty registration icon. Eaton assumes no risk or liability for results of the use of the products purchased from it, including but without limiting the generality of the foregoing: (1) The use in combination with any electrical or electronic components, circuits, systems, assemblies, or any other materials or substances; (2) Unsuitability of any product for use in any circuit or assembly.

Purchaser’s rights under the warranty shall consist solely of requiring Eaton to repair, or at Eaton’s sole discretion, replace, free of charge, F.O.B. factory, and defective items received at said factory within said term determined by Eaton to be defective. The giving of or failure to give any advice or recommendations by Eaton shall not constitute any warranty by or impose any liability upon Eaton. The foregoing constitutes the sole and exclusive liability of Eaton AND IS IN LIEU OF ANY AND ALL OTHER WARRANTIES EXPRESSED, IMPLIED OR STATUTORY AS TO THE MERCHANTABILITY, FITNESS FOR PURPOSE SOLD, DESCRIPTION, QUALITY, PRODUCTIVENESS OR ANY OTHER MATTER.

In no event shall Eaton be liable for special or consequential damages or for delay in performance of the warranty.

This warranty does not apply if the product has been misused, abused, altered, tampered with, or used in applications other than specified on the nameplate. At the end of the warranty period, Eaton shall be under no further warranty obligation expressed or implied.

The product covered by this warranty certificate can only be repaired or replaced by the factory. For help on troubleshooting the SPD, or for warranty information, call 1-800-809-2772, option 4, sub-option 2. Repair or replacement units will be returned collect. If Eaton finds the return to be a manufacturer’s defect, the product will be returned prepaid.
