Eaton’s EH series electrohydraulic cylinder combines a high-performance cylinder, precision feedback transducer and control valve mount in one package. Advanced closed-loop motion control is readily attainable with the addition of an Eaton proportional, servo, directional control or AxisPro® valve. The valve can be pre-mounted onto the configured cylinder and adjusted to customer specifications.

By integrating all components, the EH series cylinder eliminates the need for separate hydraulic manifolds, plumbing between control valve and cylinders, transducer mounting brackets and other complex arrangements.

The cylinder offers infinite positioning with high repeatability, which can improve yield in the production cycle, as well as programmable motion control, which enables faster cycles than conventional hydraulic circuitry.

Eaton electrohydraulic cylinders are available in NFPA tie rod, mill duty, welded or threaded styles.

**Features**

- Machined manifold
- Precision solid state position transducer
- Optional cast aluminum transducer cover
- Case hardened, hard chrome-plated piston rod
- Rod cartridge assembly
- Piston sealing system
- Precision steel heads and caps

**Benefits**

- Provides significant cost savings over custom assemblies
- Simplifies and speeds installation and maintenance
- Eliminates leaks and piping problems
- Offers maximum durability and extended seal life
- Helps eliminate waste and increase production
- Enables distributors and OEMs to source cylinder and control valve from a single supplier

**Applications**

- Press manufacturing
- Alternative energy
- Forestry
- Civil
- Oil and gas
- Processing
- Aerospace

**Specifications**
