

Eaton ELocker4[®] Direct Acting Dana 60/70 30, 35 & 40 Spline Axles

ELocker4[®]

Why the Eaton ELocker?

This highly engineered unit allows for maximum driveline flexibility. Users can switch from a fully-open to 100%-locked axle at the touch of a button. The four (4) pinion gear design provides added strength and capability for more extreme vehicles.

Vehicle Uses

The Eaton ELocker is designed to handle even the most extreme off-roading as well as a variety of other uses including rock crawling, towing and high performance vehicles. Its smooth engagement and increased strength make it an ideal solution for improved traction and maneuverability. Units are available for both front and rear axle installation.

Operation

Users operate the ELocker with the flip of a dash switch. When in the "off" position, the unit operates as a fully-open differential. A new design mechanism activates the electronically-controlled internal differential gear set to the differential case providing 100% instant axle-lock.

Features and Specs.

- Four pinion gear design for increased strength
- Fastest engagement ever (0.14 seconds)
- Integrated wiring harness for easy installation
- Eaton NGR Locking Rocker Switch with hi-intensity blue LED
- 100% axle lock at your fingertips
- Fits Dana 60 / 70 axles
- Remains locked in forward and reverse
- Available in front and rear axles
