

Eaton Direct Acting ELocker®

Dana 60/70

ELocker®

Direct Acting. Instant Lock.

This highly engineered unit allows for maximum driveline flexibility. Users can switch from a fully-open to 100%-locked axle at the touch of a button. The direct acting mechanism activates in .14 second to provide 100% instant axle lock, and remains locked in both forward and reverse.

Vehicle Uses

The Direct Acting ELocker is designed for high-performance off-roading. Also great for other uses including towing, rock-crawling and high-performance vehicles. Its

smooth engagement, validated strength and four pinion gear design make it an ideal solution to improve traction and maneuverability in extreme vehicle applications.

Operation

Users operate the ELocker with the flip of a dash switch. When in the "off" position, the unit operates as a fully-open differential. When activated, the electronically-controlled internal differential gear set provides 100% instant axle-lock.

Features and Specs.

- Four pinion gear design
- Fastest engagement ever (0.14 seconds)
- 100% axle lock at the touch of a button
- Fits Dana 60 / 70 axles
- Available for front and rear axles
- Remains locked in forward and reverse
