Introducing the VCP-WC extra capability medium voltage drawout circuit breaker. Designed to provide all the industry-leading features of the VCP-W, plus extra capabilities for those application requirements that go beyond. The performance-enhancing features of the VCP-WC make it an ideal choice for capacitor switching duty, high-altitude applications, transformer secondary fault protection and locations with concentrations of rotating machinery or high-operating endurance requirements, to mention a few.

Consider these capability enhancements:
- Definite-purpose capacitor switching
- Higher close and latch
- Higher transient recovery voltage rate
- Higher short-circuit current
- Higher mechanical endurance
- Higher dielectric withstand level
- Higher voltage rating with \( K = 1 \)
- Three-cycle interrupting time
- Higher switching life
- Designed and tested to ANSI standards
- 29 WR fixed/retrofit configurations available
- Direct roll-in available (5, 15, 38 kV)

VCP-WC Features
- Enhanced performance ratings
- Copper primary conductors
- Silver-plated primary joints
- Glass polyester (5/15 kV) or epoxy insulation (27–38 kV)
- Front-mounted stored energy mechanism
- Manual emergency charging
- AC or DC control
- MOC and TOC switch operators
- Two-high, drawout design
- Drawout on extension rails
- Integrally mounted wheels
- Vacuum interrupters
- Copper-chrome VI contacts
- Patented V-Flex non-sliding current transfer
- Visible contact erosion indicator
- Visible contact wipe indicator
- Manual trip and close buttons
- Open-closed indicators
- Springs charged/discharged indicators
- Mechanical operations counter
- Open–close–open duty cycle

VCP-WC Medium Voltage Vacuum Circuit Breakers
5–38 kV at 16–63 kA
1200–3000A

Eaton’s electrical business, a world leader in vacuum interrupter and vacuum circuit breaker technology, offers VCP-WC with extra capabilities without sacrificing the proven features already standard with other VCP-W circuit breakers.

*Except as noted.

Three cycles.

Contact Eaton for higher RRRV or for more information.

Breaker tested to 2700A single bank switching for momentary load (thermal de-rating must consider harmonic content of current waveform).

Breaker tested to 1270A back-to-back switching for momentary load (thermal de-rating must consider harmonic content of current waveform).

Close and latch current for 1200A Type 150 VCP-W 25C is proven at 15 kV. For sealed interrupters at high altitudes, switching voltage is not de-rated.

Capacitor switching ratings are proven at 15 kV. For sealed interrupters at high altitudes, switching voltage is not de-rated.
