HCM1A1307V2
Automotive grade high current power inductors

Product features
• AEC-Q200 qualified
• High current carrying capacity
• Magnetically shielded, low EMI
• DC-DC converter applications up to 1 MHz
• Filtering applications up to Self Resonant Frequency (SRF) (See product specification table)
• Inductance range from 0.22 μH to 56 μH
• Current range from 4.0 A to 100 A
• 13.8 mm x 12.9 mm footprint surface mount package in a 6.5 mm height
• Moisture Sensitivity Level (MSL): 1
• Alloy powder core material

Applications
• Body electronics
  • Central body control module
  • Headlamps, tail lamps and interior lighting and LED lighting
  • Heating ventilation and air conditioning controllers (HVAC)
  • Doors, window lift and seat control
• Advanced driver assistance systems
  • Adaptive cruise control (ACC)
  • Automatic parking control
  • Collision avoidance system/ Car black box system
• Infotainment and cluster electronics
  • Audio subsystem: head unit and trunk amp
  • Digital instrument cluster
  • In-vehicle infotainment (IVI) and navigation
• Chassis and safety electronics
  • Airbag control unit
  • Electronic stability control system (ESC)
  • Electric parking brake
  • Electronic power steering (EPS)
• Engine and Powertrain Systems
  • Electric pumps, motor control and auxiliaries
  • Powertrain control module (PCU)/ Engine Control unit (ECU)
  • Transmission Control Unit (TCU)

Environmental data
• Storage temperature range (Component): -55 °C to +155 °C
• Operating temperature range: -55 °C to +155 °C (ambient plus self-temperature rise)
• Solder reflow temperature: J-STD-020 (latest revision) compliant

Pb FREE HF FREE RoHS

</table>

1. Open Circuit Inductance (OCL) Test Parameters: 100 kHz, 0.25 Vₑ, 0.0 Ads, ±25 °C
2. Full Load Inductance (FLL) Test Parameters: 100 kHz, 0.25 Vₑ, Iₘsat, ±25 °C
3. Iₘrms: DC current for an approximate temperature rise of 30 °C without core loss. Operating is necessary for AC currents. PCB layout, trace thickness and width, air-flow, and proximity of other heat generating components will affect the temperature rise. It is recommended that the temperature of the part not exceed +155 °C under worst case operating conditions verified in the end application.
4. Iₙsat: Peak current for approximately 20% rolloff @ ±25 °C
5. K-factor: Used to determine Bp-p for core loss (see graph). Bp-p = K * L * ΔI. Bp-p: (Gauss), K: (K-factor from table), L: (Inductance in μH), ΔI: (Peak to peak ripple current in Amps).

HCM1A1307V2 = Product code and size
HCM1A1307V2 = Product code and size
xxx = inductance value in μH, R= decimal point,
If no R is present then last character equals number of zeros
-R suffix = RoHS compliant
Dimensions (mm)

```
HCM1A1307V2-2 through R4-R
HCM1A1307V2-3 through 3R3-R
HCM1A1307V2-4 through 560-R
```

Part marking: 1AxxxV2, xxx=inductance value in μH, R=decimal point. If no R is present then last character equals number of zeros. xxxx=Lot code

All soldering surfaces to be coplanar within 0.1 millimeters

Tolerances are ±0.3 millimeters unless stated otherwise

Pad layout tolerances are ±0.1 millimeters unless stated otherwise

DCR measured from point "a" to point "b"

Do not route traces or vias underneath the inductor

Packaging information (mm)

Drawing not to scale

Supplied in tape and reel packaging, 250 parts per 13" diameter reel
