Eaton xStorage Container
Containerized energy storage system

All-in-one container
Eaton xStorage is now available in a containerized version. This all-in-one, ready-to-use solution is the perfect choice for energy storage applications in commercial and industrial environments. The containerized configuration is a single container with a power conversion system, switchgear, racks of batteries, HVAC units and all associated fire and safety equipment inside. It can be deployed quickly to expand existing power capacity or incorporated into greenfield modular facilities.

Key features
- Multiple sizings available up to 2 MWh per 20 ft container
- Second-life from 0.55 MW / 0.5 MWh up to 0.84 MWh
- New batteries from 1.1 MW / 1.2 MWh up to 2 MWh
- Maximum energy density kWh / m²
- Scalable in 20 ft modules (interconnected and in parallel)
- Complete offer includes hardware, installation & commissioning and optional service contract
- Site works such as foundation, cabling to container and trenches are executed through Eaton certified installers
- Can be transported as a standard container (sea and road)
- CSC certified

Benefits
- Multi-usage system enabling PV self consumption, peak shaving, load shifting, back-up power, electric vehicle charging station integration
- One single supplier providing you with one point of contact for certifications, warranty, services and support
- Scalable, modular and quick to deploy with a design that allows for flexible placement
- Highly efficient with minimum system losses
- Safe and reliable from tested system controls to proprietary battery management system with durable industrial design developed for harsh applications
- High value, no compromise quality, reduced design and construction costs and chances of downtime during construction

Technical disclaimer
In line with our goal to continuously improve the products and the customer service we provide, all specifications contained in this document are subject to change without notice. All drawings, descriptions or illustrations contained in this document serve to provide a clear overview and/or technical explanation of the present product and its various components and accessories.
Containerized energy storage system

A multifunctional system

Storage Container enables commercial and industrial buildings facility managers and operators to store energy from renewable sources or the grid to improve the building resiliency and reduce its carbon footprint. The system can also provide use cases such as peak shaving, load shifting or maximize PV self consumption.

Application examples

A typical use-case might use grid power to serve the loads and use diesel generators as backup generation. The users may have installed solar panels. Adding an energy storage system to this installation enables the users to store solar energy when available and release it to power the load when needed, reducing the use of diesel generators. The battery energy storage system can also be used continuously to provide a number of benefits in a wide range of applications:

- Industrial or manufacturing buildings: Store renewable or off-peak cheap electricity to do peak shaving to avoid expensive energy tariff periods and together with a PV installation, increase solar self-consumption for additional savings (Factory operations)
- Commercial buildings: Meet CO2 targets by increasing local production and consumption of renewables and smoothly integrating EV chargers while ensuring grid stability (Public spaces like shopping malls)
- Institutions or offices: Provide reliable power for operations during outages and store renewable energy locally produced as protection against raising electricity costs and intermittent supply (Hospitals, hotel or schools)
- Buildings in remote area or with unreliable power: Reduce dependence on fossil fuel supply and diesel generation (Community, campus, services)
- Grid infrastructure: Support infrastructure or defer investments by peak shaving or reducing the impact of loads on the grid

System

Modularity Expandable by adding 20 ft container
Nominal AC Grid Voltage 220 V/380 V, 230 V/400 V, 240 V/415 V, 3-phase (TN, TT, IT 4-wire)
Application controller capability Back up, peak shaving, load shifting, PV self-consumption and EV integration
Operating environment From -20 °C to +40 °C, harsh industrial applications, up to 2000 m above sea level, seafront and other high humidity/ corrosive applications
Fire alarm Included as standard. Optional fire protection system (aerosol/ impulse powder)
PCS and battery round-trip > 85 %
Compliance and standards CE: EN 50549-1: 699; other with external grid protection relay
