SUCTION FILTER
Series AS 220

1. Type index:
1.1. Complete filter: (ordering example)
AS. 220. 40G. - . B. P. -. FS. 8. -- O1. --

series: AS = suction filter
nominal size: 220
filter-material and filter-fineness:
80 G = 80 µm, 40 G = 40 µm stainless steel wire mesh, other materials on request
resistance of pressure difference for filter
- = not specified
filter element design:
B = both sides open
sealing material:
P = Nitrile (NBR);
V = Viton (FPM)
filter element specification:
- = standard;
VA = stainless steel
connection:
FS = SAE-flange connection 3000 PSI
no. of version:

1.2. Filter element: (ordering example)
01AS. 220. 40G. - . B. -. -

series: 01AS. = suction filter element according to company standard
nominal size: 220
- 5, 7 see type index-complete filter
sealing material:
- = without

2. Accessories:
- counter flanges, see sheet-no. 1652

Changes of measures and design are subject to alteration!
3. Spare parts:

4. Description:

The filter housing consists of high quality aluminium material. The filter element consists of a star-shaped pleated filter material which is supported on the inside by a perforated core tube and is bonded to the end caps.

Internormen Product Line filter elements are known as elements with a high intrinsic stability and an excellent filtration capability, a high dirt-retaining capacity and a long service life.

The AS-filters are horizontally or vertically mounted to the reservoir and connected directly to the suction-line. Due to its practical design the suction filter is easy to service. When releasing the filter lid a plate valve closes the suction-inlet of the filter and prevents the return flow of dirt oil to the reservoir, respectively when mounted horizontally the drain of the reservoir is prevented.

After the servicing respectively after changing the element the filter is again ready for operation. According to the operating condition the filter could be equipped with different accessories (clogging indicators, counter flange etc.).

5. Technical data:

- temperature range: +14°F to +176°F (for a short time +212°F)
- connection system: SAE-flange connection 3000 PSI
- installation position: optional
- housing material: G-AlSi10Mgwa DIN 1725 (3.2381.61)
- sealing material: Nitrile (NBR) or Viton (FPM), other materials on request
- usable for following fluids: petroleum-based fluids, lubrication fluids; HW-emulsions and synthetic hydraulic fluids on request
- volume tank: .42 Gal.

Classified under the Pressure Equipment Directive 97/23/EC for mineral oil (fluid group 2), Article 3, Para. 3. Classified under ATEX Directive 94/9/EC according to specific application (see questionnaire sheet-no. 34279-4).

6. Symbols:

- without indicator
- visual O1
- electrical E4,-,0,25

7. Pressure drop flow curves: Precise flow rates see ‘Interactive Product Specifier’, respectively Δp-curves; depending on filter fineness and viscosity.

8. Test methods:

Filter elements are tested according to the following ISO standards:

- ISO 2941 Verification of collapse/burst resistance
- ISO 2942 Verification of fabrication integrity
- ISO 2943 Verification of material compatibility with fluids
- ISO 3723 Method for end load test
- ISO 3724 Verification of flow fatigue characteristics
- ISO 3968 Evaluation of pressure drop versus flow characteristics
- ISO 16889 Multi-pass method for evaluating filtration performance
