We put a half-century of experience to work solving them

- Oil sand - wastewater
- Produced water
- Injection water
- Oil and gas
  - Clarified white water
  - Surface treatment
  - Wet end additives
  - Whitewater filtration
- Pulp and paper
  - Storm water
  - Tailings recycle
  - Deep mine extraction
  - Dust suppression
- Mining
  - Utility water
  - Grey and black
  - Sea water intake
- Marine
  - Mechanical seal water
  - Equipment cooling
  - Debris removal
  - Scale removal
  - Spray nozzle fabrication
- Petrochemical
  - Process water
- Power
- Food and beverage
  - Diluting, dispersing, dissolving, cooling
- Pharmaceutical and biotech
  - Process water
- Power generation
  - Process water
- Powder
- Food and beverage
  - Process water
- Petrochemical
Eaton water filtration solutions

Eaton offers a wide range of solutions for water filtration and treatment, providing efficient and sustainable solutions for various applications. Eaton's products and services include filtration systems, strainers, bag filters, cartridge filters, and other components that are designed to meet specific performance requirements and industry standards.

Key to Eaton filters and strainers

- DCF - mechanically cleaned filters
- MCF - mechanically cleaned filters
- MCS - mechanically cleaned filters
- Filter bags & Cartridges
- AFC, AFR, F

Eaton's solutions are engineered to meet the needs of various industries, ensuring high performance, durability, and cost-effectiveness. Eaton's products are designed to deliver the exact performance required for each application, and the company offers a comprehensive range of solutions for different needs.

Eaton's commitment to quality and environmental responsibility is reflected in its adherence to various standards and certifications, including ISO 9001:2008, ISO 14001:2004, and GB-150 (China). Eaton also provides support for distributors and has an extensive network of engineers and team of product support specialists dedicated to providing application engineering and technical support.

Eaton offers a range of strainers, including Eaton's Cenpeller strainers, which feature five 24" Eaton strainers with a compact, modular design and an automatic backwash system. Eaton also offers bag filtration systems and cartridge filters, which are designed to offer high efficiency and cost savings.

Eaton's solutions are suitable for various applications, including drinking water treatment, desalination pre-membrane treatment, and other critical process flow streams. Eaton's products are designed to deliver high-quality filtered water, enhanced productivity, and reduced downtime and operating costs.

Eaton's commitment to providing sustainable solutions is evident in its focus on energy efficiency, minimizing media disposal, and emission reduction. Eaton's solutions are designed to be environmentally responsible and to deliver the benefits of low energy consumption, no media disposal, and no emissions.

Eaton's Cenpeller strainers are an environmentally responsible solution that delivers the benefits of low energy consumption, no media disposal, and no emissions. Eaton's Cenpeller strainers are part of Eaton's comprehensive range of water filtration solutions, designed to meet the needs of various industries and applications.
