CPU Docker Rack Mount Conversion

**Item Numbers**
17601204, PCPRKIT20, PCPRKIT28

**Tools Required**
- Phillips head screwdriver (not supplied)

1. Remove the Roll-Out Tray and slides from the Docker as shown in figure 1.
2. Install upper channels on both sides of Docker with #89957 screws as shown in figure 1.
3. Loosely install the #8814 screws, #87858 lock washers and #87382 T-handles to the four Rack Mount Rails as shown in figure 2.
4. Install the Rack Mount Rails inside the Docker as shown in figure 3. Slide the screws behind the slots and move each rail to their appropriate location and tighten the T-handles.

**Figure 1**
- Docker
- Upper Channel
- #89957 Screws

**Figure 2**
- Rack mount rail
- #87382 T-handle
- #8814 Screw
- #87858 Lock washer

**Figure 3**
- Rack Mount Rail
- Slot
- T-handle

Note: Item 17601204 Does Not Require the upper channels
