easyE4
The fastest path to success
**easyE4 control relay**

More time for the really important things

Whether it’s about temperature control in the food industry, simple control tasks in the machine building sector or lighting control in buildings—the easyE4 from the Moeller™ series, Eaton’s next generation of control relays, makes implementing control tasks even easier, more convenient and faster. Experience the many advantages of this new technology, which allows you to free up valuable time for what’s really important.

“The easyE4 significantly reduces the time and effort involved in programming.”

From planning to maintenance
Consistently simple

The easyE4 supports you every step of the way—starting with the planning phase, thanks to the optimised size of the assortment. Enjoy greater flexibility, more transparency and time savings that will allow you to devote yourself to other tasks.

Multifunctionality ensures simplified planning
The easy relay takes on various command and control tasks in a single device:
- Logic functions
- Timing relay and counter functions
- Time switch functions
- Arithmetic functions
- PID controller
- Operating and display functions.

This simplifies the planning process:
- Up to 11 expansions can be connected
- The AC, DC and UC expansions can be used together in any combination (12/24 V DC, 24 V AC, 100-240 V AC)

Programming options that are suited to your needs
The easyE4 offers flexible programming options, either directly on the device, or via the easySoft software:
- Circuit diagrams can be created directly on the base unit, using the input keypad and text display
- Programming the devices is highly user-friendly, thanks to the four available programming languages
- The display texts, background colors and start graphics can be individually designed, for example, by adding your company’s own graphics.

Installation and commissioning made easy
The number of inputs/outputs can be easily extended with the addition of expansion modules:
- The expansion modules are connected via a unique plug connector.
- It is easy to install programming on brand-new devices via the SD card. This considerably simplifies, for example, the commissioning of series production.

Quick and easy implementation during operation
The full advantages of this powerful control relay reveal themselves during operation:
- Rapid response times of less than 2 milliseconds
- DCF77 synchronisation for high accuracy in time-dependent applications
- Rapid detection of the operating states of both the base units and the expansion modules thanks to the integrated display
- The application-specific parameters can be manually adjusted directly on the device

Everything at a glance during maintenance
The various available display options allow you to gain a quick and comprehensive overview of your projects:
- A base-unit display that’s easy to use
- Remote visualisation and access are also possible, for example via a smartphone or tablet
- Easy data logging of operating states and evaluation of events

“The easyE4 simplifies every step of the process!”
With the user-friendly easySoft software, programming the devices is quick and easy. Circuit diagrams can be easily created and adapted via a PC or directly on the device. The easy-to-navigate selection menus, as well as the simulation, online communications and documentation options, make easySoft the ideal companion for the easyE4 devices. Four different programming languages are available (ST, FBD, LD, EDP)—in other words, the right programming environment for all of your needs.

- **Ladder diagram (LD)** for transferring existing easySoft programs
- **easy programming (EDP)** enables the creation and adaptation of programs on the devices
- **Function block diagram (FBD)** provides a quick overview of the various features
- **Structured text (ST) for professionals**, to facilitate efficient programming

The system is backward compatible
- With easySoft 7, existing programs that were created for the easy series 500/700/800 can simply be transferred
- Automatic conversion of visualisations from the previous easy series to the new easyE4

The multi-level password protection protects your application and process know-how against unauthorised access.

Unique IDs for each easyE4 and program ensure that the correct programs are uploaded to the intended hardware (pairing).

The integrated oscilloscope feature can be used both in simulation mode and during operation
- Direct analysis of switching operations, based on the curve characteristics
- Pre-set analytics allow quick commissioning

**“Secure programming can be so simple.”**
Visualisation for every need

Simply versatile

The easyE4 also offers a variety of visualisation options to optimally adapt the solution to your individual needs and requirements. Texts and data can be easily displayed or changed using the easyE4 base unit display. Thanks to the integrated web server, the data can also be accessed via all Internet-enabled devices, such as smartphones or tablets. In addition, visualisation through HMIs is also possible. The access to the data can be individually defined.

- **easyE4 display**
  Use the display of the basic unit for convenient visualization on site.

- **Visualisation via Ethernet**
  Any HMI, like an XV100, can be connected to the easyE4, for example via Modbus TCP.

- **Wireless visualisation**
  Any standard browser can access the easyE4 web server via a WLAN router, a repeater or dLan.

- The **web server** is password protected
- An **individual user list** ensures secure remote access to the web browser.
- **Efficient service and maintenance**, thanks to the reliable online services in easySoft.
- **Automatic email notifications** will promptly inform you of any deviations to ensure maximum availability of your application.

---

**Data protection at a glance**

The growth in the potential of mobile data use has also led to an increase in the requirements for data security. Eaton ensures that all current data protection regulations are observed and that your data are protected against any unauthorised access. For more information regarding cyber security, see: [www.eaton.com/cybersecurity](http://www.eaton.com/cybersecurity)

---

With the easyE4, I never lose sight of the big picture.
easyE4 solutions
Ready for the future

The optimal design of your system architecture

LEVEL 1: Eaton ‘easy’ stand-alone solution

The easyE4 allows for a wide range of clever applications of varying complexity. The control of simple tasks is performed by the base unit via the integrated inputs/outputs. The system can be tailored to the task at hand by means of the existing expansions. To this end, various expansion modules are available, which can be connected via a simple plug connector.

LEVEL 2 Eaton ‘easy’ system solution

For more complex tasks, additional devices can be connected to the base unit and the expansions via the network. Via the Ethernet and NET interfaces, up to eight easyE4 devices can communicate with each other within the same network cluster.

For larger networks, the easyE4 series offers the possibility of operating up to ten clusters—each with eight individual easyE4 devices—in parallel.

With the Modbus TCP protocol, it is even possible to use Eaton’s XC300 as the central master-level control system for the easyE4 devices. And by connecting an Eaton HMI (e.g., the XV300), even the most demanding visualisations can be realised.

LEVEL 3 Eaton ‘easy’ system solution with connection to the cloud

Industry 4.0 is already a reality in many companies. In addition to enhancements in data availability, it also facilitates process optimisation along the entire value chain. Implementation requires intelligent, networked system components—also known as the Industrial Internet of Things (IIoT).

easyE4 enables integration into IIoT architectures via the built-in Ethernet interface. You can therefore transfer your data to the cloud via a router and then access it whenever you need it, from anywhere in the world.

Implementation of Industry 4.0

Industry 4.0 represents the fourth industrial revolution. Modern information and communication technologies have already made their way into production processes, where they facilitate the communication between humans, machines, plants, logistics, and products. In our white paper you will find more information about this exciting topic and how Eaton can help you with implementation.

Implementing system architectures with Eaton’s easyE4

The easyE4 control relays can be used within many different projects meeting your requirements for a flexible, modular system. If used in conjunction with the other components from the Eaton portfolio, such as our pilot devices or motor starters, the devices allow you to implement integrated system architectures that can be easily expanded.

Our example shows three different areas of application: Operation and visualisation, motor start and controls, and sensor technology. The easyE4 control relay serves as an important interface between the individual components of the system architecture.

Since the in-/outputs in the easyE4 system can be easily extended, it is possible to integrate a wide variety of devices, such as those from our RMQ-Titan range. In addition, you can also connect motor starters, variable speed starters or sensors to the easyE4. The devices within each easyE4 network (cluster) communicate via NET. The XV100, which can be easily connected via Modbus TCP, is used for visualisation.

A Modbus gateway is used to integrate additional modules, such as those from our SmartWire-DT range. Modbus TCP is also used to transmit the system-level data, which can then be visualised on a master-level control system using Codesys. With the easyE4, the operating status of the entire application can also be conveniently displayed on any mobile device.

Flexible visualisation options

In addition to HMI visualisation via Modbus TCP, the easyE4’s integrated web server also makes it possible to display the application content on tablets and smartphones. The web server is accessed by means of a wireless router. A number of built-in functions ensure secure access to the server.

Tailor-made programming options

From easy device programming (EDP) to the ladder diagram (LD), the function block diagram (FBD), and structured text (ST) for more advanced users — easySoft gives users the option to select their preferred programming language. This not only provides flexibility but also saves time.
### Technical data

**Dimensions**

- **Basic device with display**
  - Height: 10.75 mm
  - Width: 71.5 mm
  - Depth: 35.5 mm

- **Basic device without display**
  - Height: 10.75 mm
  - Width: 71.5 mm
  - Depth: 35.5 mm

- **Slim expansion module**
  - Height: 10.75 mm
  - Width: 35.75 mm
  - Depth: 35.5 mm

- **Large expansion module**
  - Height: 10.75 mm
  - Width: 71.5 mm
  - Depth: 71.5 mm
