Installation Instructions for PSG120F24RM POWER SUPPLY

READ INSTRUCTIONS BEFORE INSTALLING OR OPERATING THIS DEVICE. KEEP FOR FUTURE REFERENCE.

1. Safety instructions
- Switch main power off before connecting or disconnecting the device. Risk of explosion!
- To guarantee sufficient convection cooling, please keep a distance of 50 mm above and below the device as well as a lateral distance of 5 mm to other units.
- Note that the enclosure of the device can become very hot depending on the ambient temperature and load of the power supply. Risk of burn!
- The main power must be turned off before connecting or disconnecting wires to the terminals!
- Do not introduce any objects into the unit!
- Dangerous voltage present for at least 5 minutes after disconnecting all sources of power.
- The power supplies are built-in units and must be installed in a cabinet or room (condensation free environment and indoor location) that is relatively free of conductive contaminants.
- The unit must be installed in a IP54 enclosure or cabinet in the final installation.
- Warning: Explosion Hazard – Substitution of components may impair suitability for Class I, Division 2.
- Warning: Explosion Hazard – Do not disconnect equipment or adjust potentiometer unless the power has been switched off or of the area is known to be non-hazardous.
- CAUTION, “FOR USE IN A CONTROLLED ENVIRONMENT”.

2. Device description (Fig. 1)
(1) Input terminal block connector
(2) Output terminal block connector
(3) DC voltage adjustment potentiometer
(4) DC OK control LED (green)
(5) Universal mounting rail system

3. Mounting (Fig. 2)
The power supply unit can be mounting on 35 mm DIN rails in accordance with EN 60715. In Vertical Position, the device should be installed with input terminal block on the bottom. In Horizontal Position, the device should be installed with input terminal block on the left side.

Each device is delivered ready to install. Snap on the DIN rail as shown in Fig. 2:
1. Tilt the unit slightly upwards and put it onto the DIN rail.
2. Push downwards until stopped.
3. Press against the bottom front side for locking.
4. Shake the unit slightly to ensure that it is secured.

4. Dismounting (Fig. 3)
To uninstall, pull or slide down the latch as shown in Fig. 3. Then, slide the PSU in the opposite direction, release the latch and pull out the PSU from the rail.

5. Connection
The terminal block connectors allow easy and fast wiring.
You can use flexible (stranded wire) or solid cables with cross sections:

- To secure reliable and shock proof connections, the stripping length should be 7 mm (see Fig. 4 (1)).
- Please ensure that wires are fully inserted into the connecting terminals as shown in Fig. 4 (2).
- Use appropriate copper cables that are designed to sustain operating temperature of:
  1. 60°C, 60°C / 75°C for USA
  2. At least 75°C for ambient not exceeding 50°C, and 90°C for ambient exceeding 50°C for Canada.

5.1. Input connection (Fig. 1, Fig. 5)
Use L1, L2, L3 and PE connections of input terminal connector to establish the 3 x 400-500 VAC connection. Fig. 5 shows the connection to the various network types.

In the event of a phase failure, unrestricted operation is possible with nominal capacity. The device has an internal fuse. 3 x power circuit-breakers 6 A, 10 A or 16 A power circuit breakers are recommended as backup fuses. The unit shall be installed with branch circuit protective device 20 A (UL 489 Listed).

The internal fuse must not be replaced by the user.
In case of internal defect, please call 1 - 877 - ETN - CARE

5.2. Output connection (Fig. 1 (2))
Use the “+” and “-” screw connections to establish the 24Vdc connection. The output provides 24 VDC.

The internal fuse must not be replaced by the user.
In case of internal defect, please call 1 - 877 - ETN - CARE

5.3. Output characteristic curve
The device functions normal under operating line and load conditions. In the event of a short circuit or overload the output voltage and current collapses (IOL OR IOC is H latch (150%)). The secondary voltage is reduced and bounces until short circuit or overload on the secondary side has been removed.

5.4. Thermal behavior (Fig. 6)
In the case of ambient temperatures above +50°C (Vertical) or +40°C (Horizontal), the output capacity has to be reduced by 2.5% per degree Celsius increase in temperature, and at +70°C to +80°C (Vertical) or +60°C to +70°C (Horizontal), the output capacity has to be reduced by 5% per degree Celsius increase in temperature. If the output capacity is not reduced when Tamb > 50°C (Vertical) or > 40°C (Horizontal), the device will run into thermal protection by switching off i.e. device will go in bouncing mode and will recover when ambient temperature is lowered or load is reduced as far as necessary to keep device in working condition.

FOR TECHNICAL ASSISTANCE CALL 1 - 877 - ETN - CARE
## TECHNICAL DATA FOR PSG120F24RM

### Input (AC)
- Nominal input voltage / frequency: 3 x 400-500 VAC / 50-60 Hz
- Voltage range: 320-600 VAC
- Frequency: 47-63 Hz
- Nominal current: < 0.50 A @ 3 x 400 VAC
- Inrush current limitation, Pt (+25°C) typ.: < 30 A @ 3 x 400 VAC & 3 x 500 VAC, AC Source capability up to 3 kVA & 60 A @ 3 x 400 VAC & 3 x 500 VAC, AC Source capability up to 18 kVA.
- Mains buffering at nominal load (typ.): > 20 ms @ 3 x 400 VAC; > 40 ms @ 3 x 500 VAC
- Turn-on time: < 1 sec.
- Internal fuse: T 3.15 AH / 500 V, 600 V
- Power circuit-breaker characteristic: B
- Leakage current: < 3.5 mA

### Output (DC)
- Nominal output voltage Uo / tolerance: 24 VDC ± 2 %
- Adjustment range of the voltage: 24-28 VDC (maximum power ≤ 120 W)
- Nominal current: 5 A
- Derating: > 50°C (2.5 % / °C), > 70°C (5% / °C) in Vertical
  > 40°C (2.5 % / °C), > 60°C (5% / °C) in Horizontal
- Startup with capacitive loads: Max. 10.000 μF
- Max. power dissipation idling / nominal load approx.: 16.5 W
- Efficiency (at 400 VAC & 500 VAC and nominal values): > 87.0% @ 3 x 400 VAC, > 86.0% @ 3 x 500 VAC
- Residual ripple / peak switching (20 MHz) (at nominal values): < 50 mVpp / < 150 mVpp
- Parallel operation: PSG480R24RM / PSG960R24RM / With ORing Diode

### General Data
- Type of housing: Aluminum
- Signals: Green LED DC OK
- MTBF: > 500,000 hrs.
- Dimensions (L x W x H): 121 mm x 50 mm x 117.3 mm
- Weight: 0.66 kg
- Connection method: Screw connection
- Stripping length: 7 mm
- Operating temperature (surrounding air temperature): -25°C to +60°C (Refer to Fig. 6)
- Storage temperature: -25°C to +85°C
- Humidity at +25°C, no condensation: < 95% RH
- Vibration (non-operating): 10 to 500 Hz @ 30 m/s² (3 G peak); displacement of 0.35 mm; 60 min. per axis in acc. with IEC 60068-2-6
- Shock (in all directions): 30 G (300 m/s²) in all directions according to IEC 60068-2-27
- Altitude (operating): 2,000 Meters for industrial application
  2,500 Meters for ITE application
- Pollution degree: 2
- Climatic class: 3K3 according to EN 60721

### Certification and Standards
- Electrical equipments of machines: IEC 60204-1 (over voltage category III)
- Electronic equipment for use in electrical power installations: EN 50178 / IEC 62103
- Safety entry low voltage: PELV (EN 60204), SELV (EN 60950)
- Industrial control equipment: cULus listed to UL 508 and CSA C22.2 No.107.1-01, CSA to CSA C22.2 No. 107.1-01 (File No. 250468)
- Hazardous location: cCSAus to CSA C22.2 No.213-M1987, ANSI / ISA 12.12.01:2007 [Class I, Division 2, Group A,B,C,D T4, Ta = –25°C to +80°C for Vertical (> +50°C derating) and -25°C to +70°C for Horizontal (> +40°C derating)]
- Protection against electric shock: DIN 57100-410
- CE: In conformance with EMC directive 2004/108/EC and low voltage directive 2006/95/EC
- Component Power Supply for general use: EN 61204-3
- ITE: EN 55022, EN 61000-3-2, EN 61000-3-3, EN 55024
- Industrial: EN 55011
- Limitation of mains harmonic currents: EN 61000-3-2

### RoHS Compliant
- Yes

### Safety and Protection
- Transient surge voltage protection: VARISTOR
- Current limitation at short-circuits approx.: Ilim = 150 % of Ired,Typically
- Surge voltage protection against internal surge voltages: Yes
- Isolation voltage: Input / output: 4 kVAC
  Input / PE: 2 kVAC
  Output / PE: 1.5 kVAC
- Protection degree: IP20
- Safety class: Class 1 with PE connection
