In order to meet your critical backup power needs, Eaton’s Electrical Sector has introduced the ASAP Quick Ship Program. If your critical order is entered by 12 p.m. EST, we will ship your Automatic Transfer Switch (ATS) the next day.

The Eaton multi-tap transformer, available in three- and four-pole transfer switches, gives you the flexibility to set your ATS up for different voltages on-site. By changing the tap position and reprogramming the controller, you can field adjust the voltage to three-phase 480V, 240V, and 208V.

The following transfer switches are currently available on the ASAP program.

### Quantity limitations

This program is intended for emergency situations. The quantity limitation is one ATS per order. If your situation requires multiple transfer switches, please contact ATS Sales at salessupportATS@eaton.com.
