EATON
Powering Business Worldwide
The Most Complete, Highest Quality, Electrical Distribution Equipment for Marina Applications

Known as a leader in electrical control, power distribution, and industrial automation products and services, Eaton Corporation consistently provides power management solutions. Eaton is able to provide a complete electrical solution to marina developers and managers. For more information on the other products available from Eaton, visit us online at www.eatonelectrical.com or www.marinapower.com.

What Eaton Has to Offer:

- Eaton is the market leader and has more marina power products in service than all other suppliers combined.
- We offer a complimentary, comprehensive in-house electrical design service for your complete marina development needs utilizing high-quality products manufactured by Eaton.
- Eaton can provide your marina with the highest quality power pedestals and distribution equipment, as well supply the entire electrical needs of your surrounding development.
- Eaton offers a comprehensive portfolio of electrical solutions for your complete marina project. Eaton sells to customers in over 150 countries, has 100 years’ experience in power management, and is the world’s leading supplier of marina power equipment.

Let Eaton Provide All of the Electrical Solutions for Your Marina Development

Make Eaton your ultimate solutions provider for all your electrical needs. Eaton offers a complete portfolio of electrical solutions to complete your next marina project.
About Us
Since 1990, Marina Power and Lighting has been providing boat owners and marina operators with the highest quality, weatherproof electrical equipment on the market. We continue to lead the industry with the largest selection of innovative marine products, ranging from power pedestals to distribution equipment and wire.

Our manufacturing facility in Williamsburg, Virginia allows us the capacity needed to keep up with today’s growing demand. The Lighthouse, Hatteras, and Newport Harbor Mate are constructed of high-strength, engineered resins that make them the longest lasting, most reliable units available on the market. We have units that have been in service for more than 20 years and are still operating daily. These units offer solid bolted electrical connections and yield unprecedented reliability in the tough marine environment.

Eaton Corporation utilizes the latest technology in laser cutting machines, fabrication equipment, and coating processes. This allows our facility to manufacture stainless steel pedestals, substation enclosures, power point mega yacht units and distribution panel cabinets. We are able to control all aspects of manufacturing and provide a high-quality product at the most competitive price in the industry.

Left:
Sun Harbor Marina, San Diego, CA.
Our professional sales and technical staff will assist you and your design team through all aspects of your marina project. Proper planning and layout of the electrical system will minimize equipment and wire costs, as well as reduce installation time and possible construction delays. Eaton can also provide all the wiring necessary to complete the project.

Electrical Layout Designs:

- Circuit Layout
- Transformer Sizes
- Pedestal and Receptacle Selection
- Disconnect Sizes
- Panel, Breaker and Wire Sizes
- Voltage Requirements
- Voltage Drops
- Conduit Sizes
- Substation Sizes and Design

### Standard Features
- Photocell-Controlled 14 Watt Compact Fluorescent Twistbulb Light with Amber Lens That Provides 360 Degrees of Lighting
- Lockable Weatherproof Doors Which Protect Breakers and Receptacles While In Use (A Requirement of N.F.P.A. 303 and NEC Art. 555)
- Hose and Cable Brackets
- Heavy Resin Housing with a Two-Part Polyurethane Coating for a UV Resistant, Long Lasting Finish
- Copper Bus Bar with Ratings from 250 to 500 Amps
- “Hingeless” Base Providing Easy Access for Both Installation and Maintenance
- Backlit Universal Faceplate for Easy Receptacle Plug-In at Night
- NEMA 3R Rating
- Circuit Breaker Protection for All Receptacles

### Available Options
- Digital Electronic Metering
- Built-In Meter Socket
- 20A/125V GFI Receptacle*
- High-Speed Internet Connections
- Wireless Remote Metering for Electric and Water
- Surge Protection Device (SPD) to Protect from Voltage Surges, Spikes or Lightning on the AC Power Line
- Stainless Steel Door Hinge on Receptacle Main Doors
- Single or Dual Steel 1/4 Turn Ball Valves with 3/4” Hose Bibs and Stainless Steel Handles
- Single or Dual Phone and/or Cable TV Connections
- Base Cap
- Base Extension
- LED Lighting
- Clear, Blue, and Red Lenses

* 20 Amp GFI receptacles are not to be used for shore power.

Admiral - SS Base Diagram (Double Feed)
The Hatteras Light is an elegant and low cost solution to your shore power needs. It utilizes the same 360 degree light assembly as the Lighthouse, yet is only 31 inches tall. Thousands of these attractive pedestals are found not only in marinas, but also around pools, deck areas, boardwalks and landscape areas.

| MOUNTING BASE AND POLE | 18” - 36” |
Designed for marinas with transient boat slips, the Smart Start Kiosk from Eaton provides marina managers a simple solution for billing and managing slips.

The “Smart Start” kiosk not only prevents power theft; it also eliminates the need for 24 hour monitoring of the slips. Boaters are able to come in at any time of the day or night and activate a pedestal.

Substations
Distribution Equipment

An essential component to the design of the modern marina, the substation safely and efficiently distributes power throughout the marina. Our substations feature Eaton distribution equipment in a locking, stainless steel enclosure. Through proper utilization of electrical distribution equipment, the marina designer is able to reduce the overall electrical infrastructure costs while increasing efficiency.

Ventilation

The substation ventilation is designed to optimize air circulation over and around the transformers and through the panel compartment so that the substation operates at lower temperatures. Substations come equipped with temperature controlled cooling fans for exhausting hot air from the cabinet and solar shield.
In order to keep wiring costs down, many marina design engineers specify higher voltages on long wire runs, requiring transformers to transform that power down to a usable voltage. Eaton offers enclosed transformers designed to withstand harsh coastal environments. Through proper utilization of electrical distribution equipment, the marina designer is able to reduce the overall electrical infrastructure costs while increasing efficiency.

**Standard Features**
- Copper Terminations
- Copper-Wound, Low-Noise Transformer that is Double Insulated and Epoxy Over-Coated
- All Copper to Copper Connections
- 316L Stainless Steel Enclosure that is Powder-Coated with a Polyester Resin

- Three-Phase: 45 to 500 KVA
- Dual-Phase Option

**Primary Voltages**
- 480WYE 3ø
- 480V 3ø Delta 3-Wire +G
- 480V 1ø 2-Wire + G

**Secondary Voltages**
- 127/220V 3ø Y 4-Wire
- 120/208V 3ø Y 4-Wire
- 120/240V 1ø 3-Wire

**Marina Power Distribution Transformer KVA Availabilities**
- Single-Phase: 50, 75, 100, 150, 167.5, 200, 250, 330, 500 KVA
- Three-Phase: 45, 75, 112.5, 150, 225, 300, 500 KVA
One of the many electrical distribution products we offer are Eaton panelboards. All of our panels feature copper buss and bolt-on breakers. Panels can be configured as Main Lugs Only or Main Breaker with branch circuit breakers based on customers’ requirements. Our lockable stainless steel enclosures are powder-coated with a polyester resin and NEMA 3R rated.

**Standard Features**
- Copper Bus Bars
- All Exterior Hardware Is Stainless Steel
- 316L Stainless Steel Enclosure that is Powder-Coated with a Polyester Resin
- Main Breaker or Main Lugs up to 1200A
- Branch Breaker 20 to 1200 Amps

**Available Options**
- Surge Protection Device (SPD)
- Ground Fault Monitoring
Ground Fault Monitor

Our ground fault monitoring systems are designed to detect fault currents in the AC shore power system. The Ground Fault Monitor helps reduce the risk of injury or property damage, which may result from stray current. The ground fault monitoring system operates 24 hours a day and provides a visual status.

Standard Features

• Adjustable Trip Level 10mAmps to 10 Amps
• Visual Alarm
• Dry Contacts
• Controllable up to 13 Circuits
• Heavy 316L Stainless Steel Housing that is Powder-Coated with a Polyester Resin

LED Lighting

LED Lighting saves electricity over conventional lighting, lasts much longer, and has a positive influence on our environment versus more inefficient mercury-filled fluorescent lighting. Go green and save money with Eaton’s LED lighting option.

LED lighting option is UL certified.

Benefits:

• LED uses significantly less current (amps) than a fluorescent bulb uses, costing less to operate
• LED does not contain mercury which can create disposal issues

Available Options:

• LED upgrade kit available for pedestals already installed
Using the latest technology, Eaton manufactures a line of robust digital electronic submeters providing economical energy management solutions. Our product meets the +/- 2% accuracy requirements by ANSI (American National Standards Institute) and is approved by the state of California. (+/- 1% over full range 0-100 amp with .5 to 1 power factor)

The meter drives an electro-mechanical counter with a 12 volt pulse providing readings to the tenth of kilowatt hour. Optional output allows for integration of our wireless metering system providing remote kilowatt hour readings.

User Friendly Design
Eaton’s meter is compact and user friendly. The unit will automatically calibrate to current transformers eliminating the need to ensure proper polarity direction during installation. Simple LEDs, both red and green, indicate the line and load condition making trouble shooting a breeze.

Wireless System
All of our meters are “wireless capable” to allow for wireless meter reading. This technology enables the marina to get meter readings from one central location rather than visiting every site to read the counters.

Available Options:
- Wireless capability available through use of transmitters. Radio Frequency data is sent to software that calculates kilowatt-hour usage per pedestal or per slip user.

Surge Protection Devices
(SPDs) from Eaton are designed to protect solid state equipment from voltage surges caused by poor power or lightning strikes. As boaters have increasingly sophisticated electronics on board their vessels, the need arises to protect them in the event of a surge. The application of SPDs can mitigate problems with sensitive electronic equipment, keeping the equipment and related processes up and running reliably without disruption or damage due to surge-related events.

Features
- Common voltages and configurations as well as a variety of surge current capacity ratings from 50 through 400 kA provide application flexibility
- Utilizes thermally protected metal oxide varistor (MOV) technology, which provides both high energy capacity and failsafe operation
- 200 kA short circuit current rating (SCCR)
We can provide all the wiring necessary to complete any project.

**Wire**

- Type G Multiconductor
- THHN/THWN Wire
- Type W Single Conductor
- Type W Multiconductor
### Amperage & Voltage Recommendations

- For sailboats use the minimum column.
- For houseboats and fishing boats use the preferred column.
- For a mix of sail & power pleasure craft use the satisfactory column.
- The voltage rating for a 20, 30, and 50 amp single pole receptacle is 120 volt.
- The voltage rating for a 50 amp 2 pole receptacle is 120/240 volt.
- The voltage rating for a 100 amp 2 pole 4 wire receptacle is 120/240 volt.
- The voltage rating for a 100 amp 3 pole 5 wire receptacle is 120/208 volt.
- The 100 amp receptacles are IEC Pin & Sleeve configuration while all others are twistlock.
