Intelligent designs in simplified packages

Increase uptime and simplify switchgear design by specifying one of Eaton’s pre-engineered automatic transfer and intelligent control packages for Magnum DS low voltage switchgear. The packages are designed with features to meet typical customer applications while still maintaining the flexibility to meet specific requirements. The packages are available on front and rear access in standard and arc-resistant designs. Classified by the interface, the automatic transfer and intelligent control packages are as follows:

- Eaton ATC-900 controller
- Eaton programmable logic controller (PLC) with Eaton touch screen
- Power Xpert® dashboard
Eaton ATC-900 controller

**Main-Main, Main-Generator or Generator-Generator**

This controller can be utilized for transfer in a lineup with Main-Main, Main-Generator or Generator-Generator application (no tie breaker present). This option will include selector switches for Auto/Manual as well as Generator Start/Stop/Exercise.

Include the optional 7” human-machine interface (HMI) remote annunciator controller (RAC), a color touch-screen display for an easy-to-use interface to monitor and control up to eight ATC-900 controllers. The remote annunciator supports serial RS-485 Modbus® RTU and Modbus TCP/IP natively and can connect to ethernet via a serial to ethernet gateway.

**Control pushbuttons**
- Go-to-emergency/cancel go-to-emergency
- Start/stop engine test
- Alarm silence
- Bypass timers
- Manual retransfer

**Status indicators**
- S1/S2 available
- S1/S2 preferred
- S1/S2 connected
- S1/S2 status (under/overvoltage, under/overfrequency, etc.)
- Emergency inhibit
- Lockout/monitor mode
- Closed on emergency
- Go-to-emergency active
- Engine test active
- Transfer in progress
- Source 1 voltage metering
- Source 2 voltage metering
- Load voltage metering (includes current if direct current-current transformer (DCT) module is installed)
- Waiting for manual retransfer
- History of events

For detailed information on the features of the ATC-900 and the remote annunciator, refer to documentation, TD140001EN and IB140012EN.
Eaton PLC with Eaton touch screen

The Eaton PLC and Eaton touch screen can provide automatic main-tie-main transfer to increase uptime and efficiency. The desired sequence of operation can be selected with the following features:

- Open and closed retransfer
- Customer selectable retransfer (PLC program will have both open and closed)
- Select to trip via HMI
- Preferred source selection
- Basic generator control (start signal, cool down timer, 81 O/U relays, run/auto/switch)

Eaton programmable logic controller

Automatic main-tie-main transfer sequence of operation

**Open transition**

- Loss of power at main breaker #1 (52-1)
  - Voltage device detects loss of normal voltage
  - Adjustable time delay (default 5s, settable range 1–60s)
  - Main breaker 52-1 opens
  - Adjustable time delay (default 2s, settable range 1–10s)
  - Tie breaker 52-T closes
- Loss of power at main breaker #2 (52-2)
  - Voltage device detects loss of normal voltage
  - Adjustable time delay (default 5s, settable range 1–60s)
  - Main breaker 52-2 opens
  - Adjustable time delay (default 2s, settable range 1–10s)
  - Tie breaker 52-T closes
- Loss of power at main breaker #1 (52-1) and main breaker #2 (52-2)
  - No action is taken
- Return of power at main breaker #1 (52-1) after loss of power at main breaker #1 (52-1)
  - Voltage device detects normal voltage
  - Adjustable time delay (default 10s, settable range 1–300s)
  - Tie breaker 52-T opens
  - Adjustable time delay (default 2s, settable range 1–10s)
  - Main breaker 52-1 closes
- Return of power at main breaker #2 (52-2) after loss of power at main breaker #2 (52-2)
  - Voltage device detects normal voltage
  - Adjustable time delay (default 10s, settable range 1–300s)
  - Tie breaker 52-T opens
  - Adjustable time delay (default 2s, settable range 1–10s)
  - Main breaker 52-2 closes

**Optional closed transition—return to normal (follows same sequence as open transition for 1–3)**

- Return of power at main breaker #1 (52-1) after loss of power at main breaker #1 (52-1)
  - Voltage device detects normal voltage
  - Adjustable time delay (default 10s, settable range 1–300s)
  - Device 25 verifies synchronism
  - Main breaker 52-1 closes
  - Adjustable time delay (default 2s, settable range 1–10s)
  - Tie breaker 52-T opens
- Return of power at main breaker #2 (52-2) after loss of power at main breaker #2 (52-2)
  - Voltage device detects normal voltage
  - Adjustable time delay (default 10s, settable range 1–300s)
  - Device 25 verifies synchronism
  - Main breaker 52-2 closes
  - Adjustable time delay (default 2s, settable range 1–10s)
  - Tie breaker 52-T opens

EATON Magnum DS low voltage switchgear—automatic transfer and intelligent control
**Power Xpert dashboard**

The Power Xpert dashboard provides a view of intelligent devices installed in a switchgear assembly. It allows continuous monitoring and control of various parameters.

The dashboard can be integral to the switchgear assembly or remotely mounted offering a monitoring and control option outside the arc flash zone.

**Features:**

- Remotely open/close circuit breakers through control mode
- Initiate a transfer scheme in a main-tie-main switchgear for uninterrupted power supply
- Ability to configure/monitor alarms for various devices
- Provides a rich interface to monitor parameters of all devices and study the trends of those parameters

**One line view**

- The one line view shows the lineup of all the configured devices with their top five parameters in the widget; it graphically represents the power flow between various configured devices

- Clicking on a **widget** provides the top 16 parameters of the device; this again is programmable
- Clicking on the **more** button in the top parameter’s sidebar opens the device details page
- Device details page allows user to customize the top parameters, alarms, trends, etc.

**Elevation view**

- The elevation view shows a physical front view of the switchgear lineup with the status of breakers and buses
- Any alarm or fault causes the corresponding compartment to be highlighted

**Control feature**

- Control mode allows user to open/close breakers remotely; control mode can be entered from one line or elevation view
- For breakers equipped with remote operation via communication, users can enable the Arcflash Reduction Maintenance System™ and see a visual indication on screen symbolized by blue hatched bus lines

- The navigator shows the visible portion of the lineup; clicking on a **widget** provides the top 16 parameters of the device
- The navigator at the bottom can be used to move between various sections of the lineup
- The timeline is highlighted if any alarm is active
Timeline view

- Clicking on an **alarm** opens the sidebar as follows; the alarm can be acknowledged by clicking the **tab**.

- Clicking on **view alarm details** opens the alarm details page; this page lists the alarm information, such as: time of occurrence, value of occurrence and all the instances of the same alarm.

Transfer view

- The dashboard allows user to configure how a transfer will take place in case of a power failure.
- User can set the transfer to be automatic or manual; this type of transition can be configured as open/closed.

Docs view

- Docs from the menu list the support documents provided with the switchgear; one can navigate between various documents using the right arrow at bottom.
- On entering the edit mode, more documents can be added under **switchgear** or **manual** sections.

System requirements
