1.2 kV class secondary bushing installation instructions
DISCLAIMER OF WARRANTIES AND LIMITATION OF LIABILITY

The information, recommendations, descriptions and safety notations in this document are based on Eaton Corporation’s (“Eaton”) experience and judgment and may not cover all contingencies. If further information is required, an Eaton sales office should be consulted. Sale of the product shown in this literature is subject to the terms and conditions outlined in appropriate Eaton selling policies or other contractual agreement between Eaton and the purchaser.

THERE ARE NO UNDERSTANDINGS, AGREEMENTS, WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING WARRANTIES OF FITNESS FOR A PARTICULAR PURPOSE OR MERCHANTABILITY, OTHER THAN THOSE SPECIFICALLY SET OUT IN ANY EXISTING CONTRACT BETWEEN THE PARTIES. ANY SUCH CONTRACT STATES THE ENTIRE OBLIGATION OF EATON. THE CONTENTS OF THIS DOCUMENT SHALL NOT BECOME PART OF OR MODIFY ANY CONTRACT BETWEEN THE PARTIES.

In no event will Eaton be responsible to the purchaser or user in contract, in tort (including negligence), strict liability or otherwise for any special, indirect, incidental or consequential damage or loss whatsoever, including but not limited to damage or loss of use of equipment, plant or power system, cost of capital, loss of power, additional expenses in the use of existing power facilities, or claims against the purchaser or user by its customers resulting from the use of the information, recommendations and descriptions contained herein. The information contained in this manual is subject to change without notice.

The instructions in this manual are not intended as a substitute for proper training or adequate experience in the safe operation of the equipment described. Only competent technicians who are familiar with this equipment should install, operate, and service it.

A competent technician has these qualifications:

- Is thoroughly familiar with these instructions.
- Is trained in industry-accepted high and low-voltage safe operating practices and procedures.
- Is trained and authorized to energize, de-energize, clear, and ground power distribution equipment.
- Is trained in the care and use of protective equipment such as arc flash clothing, safety glasses, face shield, hard hat, rubber gloves, clampstick, hotstick, etc.

Following is important safety information. For safe installation and operation of this equipment, be sure to read and understand all cautions and warnings.

### Safety information

The instructions in this manual are not intended as a substitute for proper training or adequate experience in the safe operation of the equipment described. Only competent technicians who are familiar with this equipment should install, operate, and service it.

A competent technician has these qualifications:

- Is thoroughly familiar with these instructions.
- Is trained in industry-accepted high and low-voltage safe operating practices and procedures.
- Is trained and authorized to energize, de-energize, clear, and ground power distribution equipment.
- Is trained in the care and use of protective equipment such as arc flash clothing, safety glasses, face shield, hard hat, rubber gloves, clampstick, hotstick, etc.

Following is important safety information. For safe installation and operation of this equipment, be sure to read and understand all cautions and warnings.

### Hazard Statement Definitions

This manual may contain four types of hazard statements:

- **DANGER**
  Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

- **WARNING**
  Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

- **CAUTION**
  Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury.

- **CAUTION**
  Indicates a potentially hazardous situation which, if not avoided, may result in equipment damage only.

### Safety for life

Eaton meets or exceeds all applicable industry standards relating to product safety in its Cooper Power™ series products. We actively promote safe practices in the use and maintenance of our products through our service literature, instructional training programs, and the continuous efforts of all Eaton employees involved in product design, manufacture, marketing, and service.

We strongly urge that you always follow all locally approved safety procedures and safety instructions when working around high voltage lines and equipment, and support our “Safety For Life” mission.

### Safety instructions

Following are general caution and warning statements that apply to this equipment. Additional statements, related to specific tasks and procedures, are located throughout the manual.

- **DANGER**
  Hazardous voltage. Contact with hazardous voltage will cause death or severe personal injury. Follow all locally approved safety procedures when working around high-and low-voltage lines and equipment.

- **WARNING**
  Before installing, operating, maintaining, or testing this equipment, carefully read and understand the contents of this manual. Improper operation, handling or maintenance can result in death, severe personal injury, and equipment damage.

- **WARNING**
  Power distribution and transmission equipment must be properly selected for the intended application. It must be installed and serviced by competent personnel who have been trained and understand proper safety procedures. These instructions are written for such personnel and are not a substitute for adequate training and experience in safety procedures. Failure to properly select, install or maintain power distribution and transmission equipment can result in death, severe personal injury, and equipment damage.
Product information

Introduction
Eaton's Cooper Power™ series secondary bushings are designed for external mounting (and removal) on distribution transformers filled with transformer oil, Envirotex™ FR3™ fluid or an approved equivalent. They are designed for use inside cubicles in fluid-filled transformers. Secondary bushings are used for connecting low-voltage cables outside of the tank on pad-mounted transformers to the secondary coil winding leads inside the tank.

Read this manual first
Read and understand the contents of this manual and follow all locally approved procedures and safety practices before installing or operating this equipment.

Additional information
These instructions cannot cover all details or variations in the equipment, procedures, or process described nor provide directions for meeting every possible contingency during installation, operation, or maintenance. For additional information, contact your Eaton representative.

Acceptance and initial inspection
Each secondary bushing is in good condition when accepted by the carrier for shipment. Upon receipt, inspect the shipping container for signs of damage. Unpack the secondary bushing and inspect it thoroughly for damage incurred during shipment. If damage is discovered, file a claim with the carrier immediately.

Handling and storage
Be careful during handling and storage of the secondary bushing to minimize the possibility of damage. If the fuse cutout combination is to be stored for any length of time prior to installation, provide a clean, dry storage area.

Mounting requirements

Bushings are sidewall mounted with the internal end completely immersed under oil. All parts should be inspected for damage before using. Clamping studs must be welded around the bushing hole to accommodate either a 3-hole or 4-hole clamp. Install the gasket over the bushing shank on the bushing gasket surface. Insert the bushing assembly through the tank hole and place the bushing clamp* over the welded tank studs and against the bushing flange. Install a plated lock washer and nut on to each stud and tighten to recommended torque. Connect internal lead to the internal bushing stud or spade using the recommended torque and procedure.

Note: *One-piece molded tri-clamp bushings have the clamp molded into the bushing.
Installation of assembly

Dielectric clearances
There shall be a minimum of 1/2” clearance between phases, conductor to ground and under-oil clearance.

CAUTION
All leads should remain below the oil level.

Torque requirements

Clamping flange and molded tri-clamp bushing
- 3010-4515 A Bushings, 4-hole clamps should be tightened to 70-80 in-lbs torque.
- All other 3- and 4-hole clamps should be tightened to 40-60 in-lbs torque.
- Molded (one-piece) tri-clamp bushing should be tightened to 40-60 in-lbs torque.

Hold clamping flange against the bushing and tighten all nuts by hand against the lockwashers. Using a torque wrench, tighten nuts down gradually, alternating in increments until the recommended torque is obtained. On 4-stud clamps, tighten nuts in a diagonal sequence.

Mounting studs should be free of nicks, paint, dirt and weld splatter. They must also be correctly positioned to avoid binding on the clamping flange.

Internal bushing stud connections
- 3010-4515 A Bushing Clamp Block, 1/2” 110 ft-lbs
  Hardware Steel Bolt
- 3010-4515 A Bushing with Internal Spade, 50 ft-lbs
  3/8”-16 Grade 8 bolt, Heavy Flat Washers
  and Belleville Washers
- 5/8”-11 Brass Nuts 75 ft-lbs
- 1”-14 Brass Nuts 121 ft-lbs
- Internal Spade Connections 1/2” Steel
  Hardware
- Internal Spade Connections 3/8” Steel
  (Grade 8) Hardware

Mechanical strength
All 1210-2410 bushings are provided with a 1/4”-20 x .75” deep threaded hole at the outboard end of the spade. This hole can be used for additional bushing support for heavy weighted cables.

All 3010-4515 A bushings are provided with a 3/8”-16 x .75” deep threaded hole at the outboard end of the spade. This hole can be used for additional bushing support for heavy weighted cables.

Tri-clamp stud placement should be as shown in Figure 4. Two studs at the top and one at the bottom provide maximum cantilever strength.
