200 A 15/25 kV class elbow installation instructions
DISCLAIMER OF WARRANTIES AND LIMITATION OF LIABILITY

The information, recommendations, descriptions and safety notations in this document are based on Eaton Corporation’s (“Eaton”) experience and judgment and may not cover all contingencies. If further information is required, an Eaton sales office should be consulted. Sale of the product shown in this literature is subject to the terms and conditions outlined in appropriate Eaton selling policies or other contractual agreement between Eaton and the purchaser.

THERE ARE NO UNDERSTANDINGS, AGREEMENTS, WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING WARRANTIES OF FITNESS FOR A PARTICULAR PURPOSE OR MERCHANTABILITY, OTHER THAN THOSE SPECIFICALLY SET OUT IN ANY EXISTING CONTRACT BETWEEN THE PARTIES. ANY SUCH CONTRACT STATES THE ENTIRE OBLIGATION OF EATON. THE CONTENTS OF THIS DOCUMENT SHALL NOT BECOME PART OF OR MODIFY ANY CONTRACT BETWEEN THE PARTIES.

In no event will Eaton be responsible to the purchaser or user in contract, in tort (including negligence), strict liability or otherwise for any special, indirect, incidental or consequential damage or loss whatsoever, including but not limited to damage or loss of use of equipment, plant or power system, cost of capital, loss of power, additional expenses in the use of existing power facilities, or claims against the purchaser or user by its customers resulting from the use of the information, recommendations and descriptions contained herein. The information contained in this manual is subject to change without notice.

The instructions in this manual are not intended as a substitute for proper training or adequate experience in the safe operation of the equipment described. Only competent technicians, who are familiar with this equipment should install, operate and service it.

A competent technician has these qualifications:

- Is thoroughly familiar with these instructions.
- Is trained in industry-accepted high- and low-voltage safe operating practices and procedures.
- Is trained and authorized to energize, de-energize, clear, and ground power distribution equipment.
- Is trained in the care and use of protective equipment such as flash clothing, safety glasses, face shield, hard hat, rubber gloves, hotstick, etc.

Following is important safety information. For safe installation and operation of this equipment, be sure to read and understand all cautions and warnings.

### Safety Instructions

Following are general caution and warning statements that apply to this equipment. Additional statements, related to specific tasks and procedures, are located throughout the manual.

<table>
<thead>
<tr>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>DANGER</strong></td>
<td>Indicates a hazardous situation which, if not avoided, will result in death or serious injury.</td>
</tr>
<tr>
<td><strong>WARNING</strong></td>
<td>Indicates a hazardous situation which, if not avoided, could result in death or serious injury.</td>
</tr>
<tr>
<td><strong>CAUTION</strong></td>
<td>Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.</td>
</tr>
<tr>
<td><strong>CAUTION</strong></td>
<td>Indicates a hazardous situation which, if not avoided, could result in equipment damage only.</td>
</tr>
</tbody>
</table>

### Hazard Statement Definitions

This manual may contain four types of hazard statements:

<table>
<thead>
<tr>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>DANGER</strong></td>
<td>Indicates a hazardous situation which, if not avoided, will result in death or serious injury.</td>
</tr>
<tr>

<td>Indicates a hazardous situation which, if not avoided, could result in death or serious injury.</td>
</tr>
<tr>
<td><strong>CAUTION</strong></td>
<td>Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.</td>
</tr>
<tr>
<td><strong>CAUTION</strong></td>
<td>Indicates a hazardous situation which, if not avoided, could result in equipment damage only.</td>
</tr>
</tbody>
</table>

Eaton’s Cooper Power series products meet or exceed all applicable industry standards relating to product safety. We actively promote safe practices in the use and maintenance of our products through our service literature, instructional training programs, and the continuous efforts of all Eaton employees involved in product design, manufacture, marketing and service.

We strongly urge that you always follow all locally approved safety procedures and safety instructions when working around high-voltage lines and equipment and support our “Safety For Life” mission.
WARNING
All associated apparatus must be de-energized during installation, operation and/or maintenance.

Product information
Introduction
The Eaton Cooper Power series Deadbreak Elbow Connector is a fully-shielded and insulated plug-in termination for connecting underground cable to transformers, switching cabinets and junctions equipped with deadbreak bushings. The elbow connector and bushing comprise the essential components of all deadbreak connections.

Wide cable ranges are sized to accept cables insulated at either 175 mil or 220 mil within a given conductor size. The wider cable ranges increase installation flexibility.

The coppertop (bimetal) compression connector is a standard item to transition from the cable to the deadbreak probe. An aluminum crimp barrel is inertia-welded to a copper lug. The aluminum barrel makes the connector easy to crimp and the copper lug ensures a reliable, tight, cool operating connection with the probe contact.

CAUTION
The 200 A Deadbreak Elbow Connector is designed to be operated in accordance with normal safe operating procedures. These instructions are not intended to supersede or replace existing safety and operating procedures. The elbow connector should be installed and serviced only by personnel familiar with good safety practices and the handling of high-voltage electrical equipment.

Read this manual first
Read and understand the contents of this manual and follow all locally approved procedures and safety practices before installing or operating this equipment.

Additional information
These instructions cannot cover all details or variations in the equipment, procedures, or process described nor provide directions for meeting every possible contingency during installation, operation, or maintenance. When additional information is desired to satisfy a problem not covered sufficiently for the user’s purpose, contact your Eaton representative.

Acceptance and initial inspection
Each deadbreak connector is completely assembled, inspected and tested at the factory. It is in good condition when accepted by the carrier for shipment. Upon receipt of a deadbreak connector, inspect the connector thoroughly for damage and loss of parts incurred during shipment. If damage or loss is discovered, file a claim with the carrier immediately.

Handling and storage
If the deadbreak connector is to be stored for an appreciable time before installation, provide a clean, dry storage area. Locate the connector so as to minimize the possibility of physical damage.

Quality standards
ISO 9001:Certified Quality Management System.
Installation instructions

Cable stripping and scoring tools, available from various tool manufacturers, are recommended for use when installing deadbreak elbows. After preparing the cable, the elbow housing is pushed onto the cable. The probe contact is threaded into the coppertop connector using the supplied installation tool or an approved equivalent. Use a hotstick to perform installation and removal operations.

Complete elbow kit includes:
- Elbow Body with Test Point
- Coppertop Compression Connector
- Probe Contact
- Probe Installation Tool
- Bail Assembly
- Silicone Lubricant
- Instruction Sheet

Tools/Accessories needed:
- Tape Measure
- Wire Brush
- Knife
- Cable Stripping Tool
- Crimping Tool
- Cable Cleaner
- Cable Cutters
- Emery Cloth
Preparation of concentric neutral cable

**Step 1**
Measure down from top of the cable a minimum of 8 1/2”.
Remove cable jacket (if jacketed cable is used) to expose neutral wires.
Unwind neutral wires.

**Note:** If an Eaton Cooper Power series jacket seal is used, follow instructions supplied with the jacket seal kit.

**Step 2**
Measure down from top of the cable 5 3/4”.
Remove the insulation shield. Take care not to nick or gouge insulation.

**Step 3**
Measure down from the top of the cable 1 15/16”.
Remove the insulation and conductor shield to expose the bare conductor. Take care not to nick the conductor.
Place a 1/8” bevel on the insulation to ease installation.

**Step 4**
If not already in place, apply a suitable jacket seal over the jacket and exposed neutral wires.
Proceed to Step 5.
Elbow and probe contact installation

Step 5
Clean the exposed conductor using a wire brush.
Place the coppertop (bimetal) connector on the conductor. Make sure threaded hole in connector faces the apparatus bushing.
Crimp the connector in place using a tool and die combination listed in Table 1. Start crimping just below the knurled line and rotate each successive crimp to prevent bowing. Do not overlap crimps. Place as many crimps on the connector as will fit.

Step 6
Clean excess inhibitor grease from coppertop connector by wiping toward threaded eye.
Clean insulation with a lint free cloth saturated with a cleaning solution. Wipe insulation toward insulation shield.
Apply a thin coating of grease to the insulation.

Clean and lubricate the cable entrance of the elbow.
Place elbow on cable. With a twisting motion, push elbow onto cable until threaded eye of coppertop connector is visible in the elbow interface.

Step 7
Use the provided hex-probe installation tool to install probe contact into the compression connector. Take care not to cross-thread probe.
Proper torque is applied when the tool achieves a 180° bend.
Note: If a different installation tool is used it must apply a torque of 60-80 in-lbs to achieve proper installation.

Attach a ground lead to the grounding eye of the elbow.

Step 8
Clean the elbow and bushing interface and apply a thin uniform layer of silicone lubricant to both interfaces. Push the elbow onto the bushing until it is fully seated.
Hook the legs of the bail assembly into the tabs of the bushing clamp. Thread the eyebolt of the bail assembly tight against the back of the pulling eye of the elbow. (See Figure 2.)
