General

Eaton’s Cooper Power™ series POSI-BREAK™ insulated protective cap is an accessory device designed to electrically insulate and mechanically seal loadbreak bushing interfaces. When mated to a loadbreak product and the drain wire is attached to ground, the POSI-BREAK insulated protective cap provides a fully shielded, submersible insulating cover for energized bushings. The cap can be used for installations on bushings, junctions or feedthru devices that meet the requirements of IEEE Std 386™-2006 standard.

This cap design uses a state-of-the-art manufacturing process that creates an insulated sleeve around the top of the copper probe. It also provides a layer of insulating peroxide-cured EPDM rubber over the peroxide-cured conductive internal insert of the cap. This added insulation greatly increases the strike distance and improves the dielectrics. This increased performance reduces the potential for partial vacuum flashovers while maintaining the stress relieving Faraday Cage that is critical to long term field performance.

Installation

No special tools are required. A clampstick is used to place the protective cap on an exposed bushing interface. Refer to Service Information MN650013EN, 200 A 16, 25, and 35 kV Class Insulated Protective Cap Installation Instructions for details.
Production tests
Tests conducted in accordance with IEEE Std 386™-2006 standard:
• ac 60 Hz 1 Minute Withstand
  - 40 kV
• Minimum Corona Voltage Level
  - 19 kV
Tests conducted in accordance with Eaton requirements:
• Physical Inspection
• Periodic Dissection
• Periodic Fluoroscopic (X-ray) Analysis

Ordering information
To order the 25 kV Class POSI-BREAK Insulated Protective Cap Kit, refer to Table 2.

Table 2. Insulated Protective Cap Kit

<tr>
<td>Protective Cap, 30 Kit Bulk Pack</td>
<td>PLPC225</td>
</tr>
<tr>
<td>Protective Cap, Individually Boxed</td>
<td>PLPC225X</td>
</tr>
</tbody>
</table>

Each kit contains:
• Protective Cap with stranded copper ground wire
• Silicone Lubricant
• Installation Instruction Sheet
