250 A 24 kV class deadbreak elbow connector - interface A

DE250 - 24 kV Applications

Related products
- DRC250 Receptacle Cap
- DPD250 Dead End Plug
- DPS250 Standoff Plug
- DPE250 Earthing Plug
- DJ250 Junctions

Installation
- No special tools, heating, taping, or potting are required
- Connector may be energized immediately after installation on its mating part
- Mates with bushings, plugs, and junction devices designed for interface A and complying with the listed standards

Application
- For connection of polymeric cable to transformers, switchgear, motors and other equipment with a premoulded separable connector
- For indoor and outdoor installations
- Type A interface as described by CENELEC EN 50180 and EN 50181
- System voltage up to 24 kV
- Continuous current 250 A (300 A overload for 8 hours)
- Cable particulars:
  - Polymeric cable (XLPE, EPR, etc.)
  - Copper or aluminum conductors
  - Semiconducting or metallic screens
- Conductor size 16-120 mm²

Features
- Provides a fully screened and fully submersible separable connection when mated with the proper bushing or plug
- Built-in capacitive test point to determine the circuit status or install a fault indicator
- No minimum phase clearance requirements
- Mounting can be vertical, horizontal, or any angle in between
- 100% factory tested
  - AC withstand
  - Partial discharge

Standards
- Meets the requirements of Cenelec HD629.1 and IEC 60502-4
Quality assurance
• Our manufacturing facility is registered to ISO 9001 by third-party audit
• Required Production Tests
• Periodic X-Ray Analysis

Packaging
• Supplied in a kit with parts listed below, approximate weight 1 kg

Kit contents:
• Elbow Housing
• Conductor Contact
• Pin Contact
• Bail Assembly
• Hex Key
The kit also includes lubricant and installation instructions.

Features and detailed description

1. Pin Contact
   Tin-plated copper pin screws into the conductor connector with the supplied hex key.

2. Internal Screen
   Moulded EPDM conducting rubber screen controls electrical stress.

3. Insulation
   Moulded EPDM insulating rubber is formulated and mixed in-house to ensure high quality.

4. Pulling Eye
   Encapsulated stainless steel pulling eye with a detent to position the bail.

5. Capacitive Test Point
   Capacitive test point provides means to check circuit status. A moulded EPDM conducting rubber cap provides a watertight seal.

6. Stress Relief
   The configuration of the outer screen and insulation provides cable stress relief.

7. Cable Entrance
   The sized opening provides an interference fit to maintain a watertight seal.

8. External Screen
   Moulded EPDM conducting rubber mates with the cable screen to maintain screen continuity and ensure that the assembly is at earth potential.

9. Earthing Eye
   Moulded into the external screen for connection of an earthing wire.

10. Conductor Contact
    Inertia welded bimetallic compression connector accepts copper or aluminum conductors.

11. Stainless Steel Bail (Figure 2 or 3)
    Secures the connector to its mating bushing or accessory.

**Ordering information**

The standard kit is packaged individually in a carton with elbow housing, conductor contact, pin contact, bail assembly and other necessary parts to complete the installation. Cable sealing kits must be ordered separately.

**Step 1**
Select the insulation diameter code which best centers the insulation diameter of the cable from Table 2.

**Step 2**
Identify the conductor size and determine the desired connector type from Table 3.

**Step 3**
Change the "0" in DE250 to a "1", if a Spring Loaded Bail is required. See Figure 3.

**Ordering Example:**
For 1 20 kV cable with a 50 mm² aluminum conductor, 21.0 mm core insulation diameter, unplated DIN connector and a standard bail, specify DE250F50.

**Note:** Bimetallic connectors can be used with aluminum or copper conductors.
