600 A 15/25 kV class insulated protective cap

**Description**

Eaton meets the full requirements of IEEE Std 386™-2006 standard – Separable Insulated Connector Systems, and provides insulated, fully shielded submersible protection for energized 15 and 25 kV class deadbreak interfaces with its Cooper Power™ series 600 A, 15/25 kV class insulated protective cap. The cap is required for temporary or permanent installation on 15/25 kV deadbreak bushings, junctions and other accessories having interfaces that conform to IEEE Std 386™-2006 standard.

The cap design includes a semiconducting EPDM insert for stress relief and high quality peroxide cured EPDM insulation. The molded EPDM semiconducting shield maintains ground potential on the cap’s surface when the drain wire is connected to a common ground.

(Top image on left shows standard insulated protective cap. Bottom image shows U-OP™/T-OP™ II connector insulated protective cap.)

**Installation**

No special tools are required. A hotstick tool is used to place the protective cap on a de-energized bushing. Refer to Service Literature S600-63-1 15, 25, and 35 kV Protective Cap Installation Instructions for further information.

**Production tests**

Tests are conducted in accordance with IEEE Std 386™-2006 standard.
- ac 60 Hz 1 Minute Withstand
  - 40 kV
- Minimum Corona Voltage Level
  - 19 kV

Tests are conducted in accordance with Eaton requirements.
- Physical Inspection
- Periodic Dissection
- Periodic Fluoroscopic Analysis

<td>Standard Cap with drain wire (See Figure 1) with permanent studs</td>
<td>DPC625</td>
</tr>
<tr>
<td>U-OP/T-OP II Connector Cap with drain wire (See Figure 2) without stud</td>
<td>DPC625UT</td>
</tr>
</tbody>
</table>

Each kit contains:

- Protective Cap
- Silicone Lubricant
- Installation Instruction Sheet

Note: Dimensions given are for reference only.
