UltraSIL™ Polymer-Housed VariSTAR™ Type UI Intermediate-Class Surge Arresters Installation and Maintenance Instructions
DISCLAIMER OF WARRANTIES AND LIMITATION OF LIABILITY

The information, recommendations, descriptions and safety notations in this document are based on Eaton Corporation’s (“Eaton”) experience and judgment and may not cover all contingencies. If further information is required, an Eaton sales office should be consulted. Sale of the product shown in this literature is subject to the terms and conditions outlined in appropriate Eaton selling policies or other contractual agreement between Eaton and the purchaser.

THERE ARE NO UNDERSTANDINGS, AGREEMENTS, WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING WARRANTIES OF FITNESS FOR A PARTICULAR PURPOSE OR MERCHANTABILITY, OTHER THAN THOSE SPECIFICALLY SET OUT IN ANY EXISTING CONTRACT BETWEEN THE PARTIES. ANY SUCH CONTRACT STATES THE ENTIRE OBLIGATION OF EATON. THE CONTENTS OF THIS DOCUMENT SHALL NOT BECOME PART OF OR MODIFY ANY CONTRACT BETWEEN THE PARTIES.

In no event will Eaton be responsible to the purchaser or user in contract, in tort (including negligence), strict liability or otherwise for any special, indirect, incidental or consequential damage or loss whatsoever, including but not limited to damage or loss of use of equipment, plant or power system, cost of capital, loss of power, additional expenses in the use of existing power facilities, or claims against the purchaser or user by its customers resulting from the use of the information, recommendations and descriptions contained herein. The information contained in this manual is subject to change without notice.

Safety for life

Eaton meets or exceeds all applicable industry standards relating to product safety in its Cooper Power™ series products. We actively promote safe practices in the use and maintenance of our products through our service literature, instructional training programs, and the continuous efforts of all Eaton employees involved in product design, manufacture, marketing, and service.

We strongly urge that you always follow all locally approved safety procedures and safety instructions when working around high voltage lines and equipment, and support our “Safety For Life” mission.

Safety information

The instructions in this manual are not intended as a substitute for proper training or adequate experience in the safe operation of the equipment described. Only competent technicians who are familiar with this equipment should install, operate, and service it.

A competent technician has these qualifications:

- Is thoroughly familiar with these instructions.
- Is trained in industry-accepted high and low-voltage safe operating practices and procedures.
- Is trained and authorized to energize, de-energize, clear, and ground power distribution equipment.
- Is trained in the care and use of protective equipment such as arc flash clothing, safety glasses, face shield, hard hat, rubber gloves, clampstick, hotstick, etc.

Following is important safety information. For safe installation and operation of this equipment, be sure to read and understand all cautions and warnings.

Hazard Statement Definitions

This manual may contain four types of hazard statements:

- **DANGER**
  Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

- **WARNING**
  Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

- **CAUTION**
  Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury.

- **CAUTION**
  Indicates a potentially hazardous situation which, if not avoided, may result in equipment damage only.

Safety instructions

Following are general caution and warning statements that apply to this equipment. Additional statements, related to specific tasks and procedures, are located throughout the manual.

- **DANGER**
  Hazardous voltage. Contact with hazardous voltage will cause death or severe personal injury. Follow all locally approved safety procedures when working around high- and low-voltage lines and equipment. G103.3

- **WARNING**
  Before installing, operating, maintaining, or testing this equipment, carefully read and understand the contents of this manual. Improper operation, handling or maintenance can result in death, severe personal injury, and equipment damage. G101.0

- **WARNING**
  This equipment is not intended to protect human life. Follow all locally approved procedures and safety practices when installing or operating this equipment. Failure to comply can result in death, severe personal injury and equipment damage. G102.1

- **WARNING**
  Power distribution and transmission equipment must be properly selected for the intended application. It must be installed and serviced by competent personnel who have been trained and understand proper safety procedures. These instructions are written for such personnel and are not a substitute for adequate training and experience in safety procedures. Failure to properly select, install or maintain power distribution and transmission equipment can result in death, severe personal injury, and equipment damage. G122.2
The UltraSIL™ polymer-housed VariSTAR™ Type UI surge arrester is designed to be operated in accordance with safe operating procedures. These instructions are not intended to supersede or replace proper safety and operating procedures. Read all instructions before installing the arrester.

Surge arresters should be installed and serviced only by personnel familiar with good safety practice and the handling of high-voltage electrical equipment.

Product information

Introduction
Eaton incorporates its Cooper Power™ series UltraSIL™ polymer-housed VariSTAR™ Type UI intermediate-class surge arresters with the latest in metal oxide varistor (MOV) technology. These arresters are totally gapless and are constructed of a single series column of MOV disks. They are used for overvoltage protection of high voltage equipment, either indoors or outdoors. The arrester is designed and tested to the requirements set forth in IEEE Std C62.11™-2005 standard.

Read this manual first
Read and understand the contents of this manual and follow all locally approved procedures and safety practices before installing or operating this equipment.

Additional information
These instructions cannot cover all details or variations in the equipment, procedures, or process described nor provide directions for meeting every possible contingency during installation, operation, or maintenance. When additional information is desired to satisfy a problem not covered sufficiently for the user’s purpose, please contact your Eaton representative.

Acceptance and initial inspection
The factory takes special precautions to ship arresters in well designed containers that reduce the possibility of damage which may occur during transit. Carefully inspect each arrester for physical damage. In case of improper handling, or shipping damage, immediately file a claim with the carrier, and promptly notify your Eaton representative.

Identification
A nameplate attached to the base of each arrester indicates its catalog number, voltage rating, maximum continuous operating voltage (MCOV), rated frequency, pressure-relief current rating, class, reference to the type test standard, altitude range, serial number, and year of manufacture. Refer to Figure 1 for an example of a blank nameplate.

Handling and storage
If the arrester is to be stored for an appreciable time before installation, provide a clean, dry storage area. Locate the arrester so as to minimize the possibility of physical damage.

Quality standards
ISO 9001 Certified Quality Management System
UltraSIL™ Polymer-Housed VariSTAR™ Type UI Intermediate-Class Surge Arresters

General application recommendations
Eaton application engineers are available to make specific application recommendations.

⚠️ CAUTION
Do not install arresters that have evidence of damage.
Always handle surge arresters carefully. A damaged arrester may cause catastrophic failure upon energization.

Installation instructions

Arrester installation
UltraSIL polymer-housed VariSTAR Type UI intermediate-class arresters are shipped assembled. Choose a permanent installation location so that the arresters will be installed as close as possible (electrically) to the equipment being protected. Minimum clearance distances between any line potential surface to an arrester, and to any ground plane are listed in Table 1. Figure 3 shows minimum phase-to-ground and minimum phase-to-phase clearances. See Table 1 and Figure 4 for standard arrester dimension and weight information.

Packaged configurations
- Assembled arrester ready for installation.
- The line and ground terminal connectors are shipped unattached to the arrester, and should be assembled when the arrester is installed.

Detailed assembly instructions
1. After the arrester is in place and ready to be secured, the ground terminal connector should be placed so that the mounting hole found on the connector is directly over one of the three mounting slots on the base of the arrester.
2. The bolt (user supplied) used to secure the arrester is then run through the hole of the connector, the mounting slot, and the structure the arrester is attached to.
3. Secure the arrester to the structure with the hex nuts (user supplied).
4. Position the line terminal connector on the top of the arrester. Secure the supplied lock washer and nut until tight.

Note: The recommended torque for securing the terminal connector to the arrester and for the terminal clamp hardware is 20-25 ft-lbs, not to exceed 30 ft-lbs. Recommended maximum torque level for the eyebolt connector clamping nut is 20 ft-lbs.

Figure 2. Three-phase in-line mounting arrangement
Note: Refer to Table 1 for Dimensions “C” and “D.”

⚠️ CAUTION
Make electrical connections so that no mechanical stress is applied to the arrester.

Mechanical Strength
The ultimate cantilever strength of the Type UI intermediate-class arrester is 10,000 in-lbs. The maximum recommended working load should not exceed 4,000 in-lbs.

In order to achieve rated cantilever strength use a 10” bolt circle mounting diameter and 0.5” hardened bolts with flat washers.

Base or Foundation Mounting
Pier footings should extend below the frost line. Elevate the foundation sufficiently above the ground line for personnel safety and to prevent contamination from ground splash, drifting snow, flood water, or other contaminating conditions. If the top of the foundation is not level, shims will be required for leveling. Layout mounting dimensions for the arrester mounting base are shown in Figure 3.

Bracket or Structure Mounting
When bolting arresters directly to structures, or mounting brackets, the assembly should be rigid enough to prevent mechanical failure.
Suspension Mounting
UltraSIL polymer-housed VariSTAR Type UI intermediate-class arresters can be suspension-mounted through 108 kV. Either the top or bottom of suspension-mounted arresters can be connected to the line. It is important that the arrester is mounted so that the outer sheds of the housing are angled downward. For additional information regarding suspension mounting, contact your Eaton representative.

Horizontal Mounting
Type UI intermediate-class arresters can be horizontal mounted.

Electrical Connections
Install the arrester as close as possible (electrically) to the apparatus being protected. Line and ground connections must be short and direct. Make the ground connection to a solid, effective, and permanent low-resistance ground.

CAUTION
To prevent strains on the arrester when suspension-mounting, suspend it freely. Always make flexible connections to line and earth terminals.

Note: Equipment protection will be improved by interconnecting the arrester ground connections with the transformer tank and system neutral whenever possible.

The standard line terminal can accommodate copper or aluminum conductors through 0.82” diameter (500 MCM). The standard ground terminal can accommodate copper or aluminum conductors through 0.50” diameter.

WARNING
Before working on arresters, disconnect all line leads. Consider any part of an arrester dangerous when connected to the line, including a base not solidly grounded.

Maintenance
UltraSIL polymer-housed VariSTAR Type UI intermediate-class arresters require no special maintenance under normal conditions. If the arrester is installed in an area of severe contamination, keep the arrester housing clean by washing periodically. Arresters must be spray washed evenly in order to avoid overheating. Do not use high pressure water. Keep line and ground connections tight.

WARNING
Arresters can be washed while energized provided standard live washing procedures are followed.
