Eaton’s equipment identified below was tested for seismic withstand capability and tested in accordance with the combined requirements specified in the International Building Code, the California Building Code, and the Uniform Building Code. As required by the codes, the equipment demonstrated its ability to function after the seismic tests. The seismic capability of the equipment is illustrated in the figure below.

**SC 9000™ Medium Voltage Drives, Frames A, B and C**

*300 to 1750 hp up to 2400 Vac (output) and 300 to 3000 hp up to 4160 Vac (output)*

The frequency sweep tests revealed that the lowest equipment natural frequency is:

**7.0 Hz**

For interpretation of testing data, refer to Eaton Publication SA12501SE
