Polymer position indicator replacement
solenoid kit number 5742301B01
DISCLAIMER OF WARRANTIES AND LIMITATION OF LIABILITY

The information, recommendations, descriptions and safety notations in this document are based on Eaton Corporation’s (“Eaton”) experience and judgment and may not cover all contingencies. If further information is required, an Eaton sales office should be consulted. Sale of the product shown in this literature is subject to the terms and conditions outlined in appropriate Eaton selling policies or other contractual agreement between Eaton and the purchaser.

THERE ARE NO UNDERSTANDINGS, AGREEMENTS, WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING WARRANTIES OF FITNESS FOR A PARTICULAR PURPOSE OR MERCHANTABILITY, OTHER THAN THOSE SPECIFICALLY SET OUT IN ANY EXISTING CONTRACT BETWEEN THE PARTIES. ANY SUCH CONTRACT STATES THE ENTIRE OBLIGATION OF EATON. THE CONTENTS OF THIS DOCUMENT SHALL NOT BECOME PART OF OR MODIFY ANY CONTRACT BETWEEN THE PARTIES.

In no event will Eaton be responsible to the purchaser or user in contract, in tort (including negligence), strict liability or otherwise for any special, indirect, incidental or consequential damage or loss whatsoever, including but not limited to damage or loss of use of equipment, plant or power system, cost of capital, loss of power, additional expenses in the use of existing power facilities, or claims against the purchaser or user by its customers resulting from the use of the information, recommendations and descriptions contained herein. The information contained in this manual is subject to change without notice.

Safety for life

Eaton's Cooper Power series products meet or exceed all applicable industry standards relating to product safety. We actively promote safe practices in the use and maintenance of our products through our service literature, instructional training programs, and the continuous efforts of all Eaton employees involved in product design, manufacture, marketing and service.

We strongly urge that you always follow all locally approved safety procedures and safety instructions when working around high-voltage lines and equipment and support our “Safety For Life” mission.

Safety information

The instructions in this manual are not intended as a substitute for proper training or adequate experience in the safe operation of the equipment described. Only competent technicians, who are familiar with this equipment should install, operate and service it.

A competent technician has these qualifications:

- Is thoroughly familiar with these instructions.
- Is trained in industry-accepted high- and low-voltage safe operating practices and procedures.
- Is trained and authorized to energize, de-energize, clear, and ground power distribution equipment.
- Is trained in the care and use of protective equipment such as flash clothing, safety glasses, face shield, hard hat, rubber gloves, clampstick, hotstick, etc.

Following is important safety information. For safe installation and operation of this equipment, be sure to read and understand all cautions and warnings.

Safety instructions

Following are general caution and warning statements that apply to this equipment. Additional statements, related to specific tasks and procedures, are located throughout the manual.

DANGER
Hazardous voltage. Contact with high voltage will cause death or severe personal injury. Follow all locally approved safety procedures when working around high- and low-voltage lines and equipment.

WARNING
Before installing, operating, maintaining, or testing this equipment, carefully read and understand the contents of this manual. Improper operation, handling or maintenance can result in death, severe personal injury, and equipment damage.

WARNING
This equipment is not intended to protect human life. Follow all locally approved procedures and safety practices when installing or operating this equipment. Failure to comply may result in death, severe personal injury and equipment damage.

WARNING
Power distribution and transmission equipment must be properly selected for the intended application. It must be installed and serviced by competent personnel who have been trained and understand proper safety procedures. These instructions are written for such personnel and are not a substitute for adequate training and experience in safety procedures. Failure to properly select, install or maintain power distribution and transmission equipment can result in death, severe personal injury, and equipment damage.

Hazard Statement Definitions

This manual may contain four types of hazard statements:

DANGER
Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

WARNING
Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

CAUTION
Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury.

CAUTION
Indicates a potentially hazardous situation which, if not avoided, may result in equipment damage only.
Polymer position indicator replacement solenoid kit number 5742301B01

Product information

Introduction

Service Information MN225045EN provides instructions for the replacement of the drag-hand reset solenoid for the Eaton voltage regulator polymer position indicator. Read this manual first

Read and understand the contents of this manual and follow all locally approved procedures and safety practices before installing or operating this equipment. Read and understand the manuals detailing the installation and operation of the voltage regulator and the control used with the voltage regulator. Refer to Service Information MN225003EN, CL-7 Voltage Regulator Control Installation, Operation, and Maintenance Instructions for information on the CL-7 voltage regulator control. Refer to Service Information MN225008EN, VR-32 Voltage Regulator with Quik-Drive™ Tap-Changer Installation, Operation, and Maintenance Instructions for information on Eaton’s Cooper Power Systems voltage regulator with Quik-Drive tap changer.

Additional information

These instructions cannot cover all details or variations in the equipment, procedures, or process described nor provide directions for meeting every possible contingency during installation, operation, or maintenance. For additional information, please contact your Eaton representative.

Acceptance and initial inspection

This kit is thoroughly inspected at the factory. It is in good condition when accepted by the carrier for shipment. Upon receipt of the drag-hand reset solenoid kit, a thorough inspection should be made for damage, evidence of rough handling, or shortages. Should this initial inspection reveal evidence of rough handling, damage, or shortages, it should be noted on the bill of lading and a claim should immediately be made with the carrier. Also, notify your Eaton representative.

Handling and storage

Be careful during handling and storage of equipment to minimize the possibility of damage. If the kit is not to be placed into immediate use, store the kit where the possibility of damage is minimized.

Quality standards

ISO 9001 Certified Quality Management System

General

The purpose of this kit is to provide a replacement drag-hand solenoid for the Eaton voltage regulator polymer position indicator.

Instructions

Preparation
1. Check the drag-hand reset (DHR) circuit for power by using a voltmeter to check for voltage between the DHR terminal and ground on the panel behind the voltage regulator control. No voltage should be present. If voltage is present, take steps to troubleshoot and resolve the problem.

2. If the voltage regulator is energized, use locally approved steps and procedures to insure a safe approach to the position indicator on the cover of the voltage regulator.

3. On energized voltage regulators, take these steps regarding the voltage regulator control: Move the Control Function switch to OFF, move the Power switch to OFF, and remove the motor fuse.

Removal of solenoid assembly
4. Open the main cover of the position indicator by unlatching the hasp on the right-hand side. See Figure 2.

5. To remove the DHR solenoid module from the position indicator, use a standard screwdriver to loosen the thumb-screw on the module. See Figure 3.

6. With the thumb-screw fully loosened, pull on the DHR module to remove it from the position indicator face. See Figure 4.
**CAUTION**

Insure that no voltage is present between the orange/black and the white ground wires connected to the DHR solenoid using a voltmeter. Failure to do so could result in an electric shock or equipment damage.

7. Using a pair of needle-nose pliers, remove the orange/black and white wires from the terminals on the solenoid. See Figure 5.

8. Connect the orange/black wire to the inside terminal post on the new DHR solenoid. Connect the white wire on to the outside terminal post of the new module. See Figure 5.

9. Open up the drag hands on the module so that they will fall on the proper sides of the indicator pointer. See Figure 6.

10. Set both the lower and raise limit switch to 16 L and 16 R. This will make it easier to insert the new DHR solenoid. See Figure 7.

---

**Figure 5. Solenoid terminals**

**Figure 6. Drag hand positioning**

**Figure 7. Limit switch positions**
11. While aligning the DHR module for installation, align the solenoid plunger, (Figure 8), up with the cutout slot in the position indicator housing, (Figure 9), before inserting the module.

12. Align the screw threads with the screw mounting hole threads, press down on the module and tighten the thumb-screw.

13. Restore power to the voltage regulator control and reinstall the motor fuse.

14. Manually position the drag hands so that they are not together at the indicator pointer. Press the DHR switch on the control panel. The drag hands should return to the indicator pointer.

15. Close the cover on the position indicator and latch the hasp to complete the work.
