Mass notification solutions for the healthcare market
Integrated mass notification solutions

Ensuring a resilient healthcare system is vital for the nation’s safety and security. Eaton’s reliable and proven solutions are designed to serve your healthcare facility’s present and future emergency communications needs. If a crisis occurs at your hospital or healthcare facility, how will you provide information to personnel, first responders, and patients?

From inclement weather announcements to hospital evacuations, you need a Mass Notification System (MNS) that gives you the reliability and flexibility to effectively get the right message to the right people at the right time under all emergency circumstances.

When public health is at risk, rely on Eaton’s integrated mass notification solutions, ALERiTY, to protect, alert and inform people within seconds of what to do in the event of an emergency or disaster, whether natural or man-made.

From a single user interface, ALERiTY allows you to broadcast crisp, clear and intelligible live and recorded voice messages and visual alerts via secure networks. Whether in an administrative office or hospital grounds, those in immediate threat areas can be alerted quickly and accurately.

Whether your healthcare organization is located within a single facility or has multiple buildings in different locations, Eaton’s MNS is customizable to meet your organization’s needs. This modular and scalable system is easily expanded in phases by leveraging your existing systems. You can build your notification system one layer at a time, starting with an in-building emergency communications system or an outdoor Giant Voice speaker system. You can add and integrate the different layers as funds become available.

We believe that one of the key components to the security and protection of your critical infrastructure is a Mass Notification System. Regardless of the number of facilities or distance from Emergency Operations Center, Eaton’s MNS is the most reliable, field-proven system available—designed especially to serve your healthcare facility’s needs today and well into the future.
Integrated mass notification solutions

WAVES command & control

Reliable & easy-to-use
- Integrated platform that seamlessly manages in-building and wide-area mass notification
- Easy-to-use, one click solution to launch critical emergency messages
- Fully redundant MNS solution: multiple points of command & control though Web-client GUI; Standby Server available
- Interoperable IP-based platform that integrates with other life safety systems for seamless system management and monitoring
- Remotely access the system to activate messages
- Supervision and monitoring of the end nodes assure that messages are received as sent
- Modular and scalable for future expansion

SAFEPATH in-building MNS

Multi-use capabilities
- Supervised paging, messaging, background music delivery and emergency communications system with 24 VDC battery backup
- Full control of building audible and visual notification appliances
- Live microphone and pre-recorded messages
- Telephone zone paging, addressable zone paging
- Fire alarm control panel interface
- Scalable from 40 watts to in excess of 25,600 watts of audio power

Code compliant
- UL 864 9th edition listed and NFPA-72 Compliant, UL 1480 listed speakers for Fire Protective Service, and UL 1971 for Emergency Devices for the hearing impaired
- OSHA 1910.165 Employee Alarm Systems

Exceder LED3 high fidelity speakers & speaker strobes

High fidelity sound output
- Efficient design for high intelligibility at minimum wattage
- Frequency range: 300 to 8000 HZ—widest range in the industry

Energy efficient
- Industry’s lowest current draw
- Fewer power supplies required, smaller wire gauge, reduced wire runs

Low profile design
- One of the smallest footprints with sleek, modern aesthetics
- Amber lens & special lettering available

WAVES wide-area outdoor MNS

Industry-leading voice intelligibility
- Advanced amplification system design penetrates the atmosphere at a narrow band, focusing the beam directly at the audience for better sound pressure and higher intelligibility
- Equalized intelligibility—broadcast messages as clearly at 2000 ft. as at 100 ft.
- Directing sound where you need it—omni-directional and directional speaker coverage available
- Energy- and cost-efficient advanced amplification system

Life safety standards
- TUV Certification: UL/CSA/EN 60950-1
