Rackstuds rackmounting system

Revolutionary cage nut replacement for mounting IT gear in square hole rails

Rackstuds™ are an alternative for cage nuts which are used to mount IT, Pro A/V, Security and Telecommunications equipment in 19" EIA enclosures with square hole rails. Rackstuds make it easier to mount gear because they install from the front which provides the user a place to support equipment while spinning and locking the nut.
Solution highlights >

Easy installation

- Rackstuds install from the front, which simplifies their installation. Cage nuts can be tricky to get in, especially when the racks starts to get populated.

- Installation is tool-free and can be completed in seconds. They are just as easy to remove and reuse.

Strong

- Rackstuds can mount up to 44 lbs. (20kg) of equipment.

Safe

- Made from non-conductive fiber reinforced thermoplastic, Rackstuds won't pose an electrical threat to the user or gear.
