Vickers™
Proportional Directional Valves without Feedback

KBD/TG4V-3, 1* Series
Pressures to 350 bar (5000 psi)

We Manufacture
Solutions

This product has been designed and tested to meet specific standards outlined in the European Electromagnetic Compatibility Directive (EMC) 89/336/EEC, amended by 91/230/EEC, 92/31/EEC and 93/68/EEC, article 5. For instructions on installation requirements to achieve effective protection levels, see this leaflet and the Installation Wiring Practices for Vickers® Electronic Products leaflet 2468. Wiring practices relevant to this Directive are indicated by Electromagnetic Compatibility (EMC).

General Description

Vickers™ KB*G4V-3 proportional valves are designed to provide controlled oil flow in proportion to an electrical command signal. They are available in two versions. Firstly a double solenoid version that will provide reversible flow and return to an actuator. Secondly a single solenoid version that provides a single direction of flow.

The KB* valve incorporates an integral control amplifier. Factory set adjustments for gain, spool deadband compensation and dither ensure excellent reproducibility valve-to-valve.

Electrical connection is via a standard 7-pin plug and requires a power supply and command signal which can be either voltage or current (model code option).

In addition to improving machine performance and life, the KB* proportional valves substantially simplify system design by combining direction and flow capabilities in one single package that mounts onto a standard ISO 4401 interface.

New Features and Benefits
- State of the art digital electronic technology
- Rugged and robust die-cast housing
- Optional voltage (+/-10 volt) or current (4-20 mA) demand input
- Adjustable ramp (0-12 sec)
- Wide range of supply voltage
- Optional external enable feature
- IP67 environmental protection
- Full CE electromagnetic capability to EN 50081-2 and EN 50082-2
- Vibration and shock tested

Standard Features and Benefits
- Factory adjusted to ensure excellent valve-to-valve reproducibility
- Installation wiring reduced and simplified
- Wide range of speed and flow rate options
- Simple valve removal and replacement for service i.e., plug and play
- Standard 7-pin connector
- 350 bar (5000 psi) pressure rating
- Supported by auxiliary function electronic modules

### Valve Type
- KB - Proportional valve with integral amplifier, B series

### Control Type
- D - Directional valve
- T - Throttle valve

### Mounting
- G - Subplate mounted

### Operation
- 4 - Solenoid operated

### Pressure Rating
- V - 350 bar (5000 psi), ports P, A & B

### Interface
- 3 - ISO 4401, size 03-02-0-94, ANSI B33.7M-DO3

### Spool Type
- 2 - Closed center
- 33 - P port closed, A & B to tank

### Spool/Spring Arrangement
- C - Spring centered, dual solenoid
- B - Spring centered, single solenoid (solenoid "B" version only, solenoid "A" for "V" version)

### Spool Flow Rating - at 5 bar (75 psi) per metering flow path
- 03 - 3 L/min (0.79 USgpm)
- 07 - 7 L/min (1.85 USgpm)
- 13 - 13 L/min (3.43 USgpm)
- 20 - 20 L/min (5.28 USgpm)
- 24 - 24 L/min (6.34 USgpm)

### Spool Metering Type
- N - Meter-in and meter-out
- F - Fine meter-in and meter-out
- S - Meter-out only

### Flow Rating for Asymmetric Flow Spools
- 10 - 10 L/min (2.64 USgpm) (20N10 only)
- 0 - Omit for symmetrical spools

### Manual Overrides
- Blank - Plain overrides
- H - Water resistant overrides
- Z - No overrides

### Solenoid Energization Identity
- V - Solenoid "A" is at "A" port end, solenoid "B" is at "B" port end, independent of spool type
- Blank - US ANSI B93.9 standard (energize solenoid "A", flow is P-A)

### Electrical Command Option
- 1 - +/- 10V control signal
- 2 - 4-20 mA control signal

### Electrical Connection
- PC7 - 7-pin connector, without plug supplied
- PE7 - 7-pin connector, with plug supplied
- PH7 - As PE7 but with pin "C" used for enable signal
- PR7 - As PC7 but with pin "C" used for enable signal

### Coil Rating
- H - 24V DC amplifier supply

### Warning
Valves with integral amplifiers are supplied with or without the metal 7-pin plug. The Vickers™ plug, part no. 934939, must be correctly fitted to ensure that the EMC rating and IP67 rating are achieved. The plug retaining nut must be tightened with a torque of 2-2.5 Nm (1.5-2.0 lbf ft) to effect a proper seal.

Electromagnetic compatibility (EMC):

- Emission (10 V/m) EN 50081-2
- Immunity (10 V/m) EN 50082-2

Monitor signal (pin F) KBD valves

- Output impedance 10 kΩ

Step input response with flow through P-A-B-T

- Δp=5 bar (75 psig) per metering path, e.g. P-A
- Required flow step for 24V (H) version:
  - 0 - 100%
  - 100% - 0
  - +90% to -90%

Reproducibility, valve-to-valve (at factory settings):

- Flow at 100% command signal ≤5%

Protection:

- Electrical Reverse polarity protected
- Environmental IEC 529, Class IP67

Ambient air temperature range for full performance

- 0°C to 70°C (32°F to 158°F)

Oil temperature range for full performance

- 0°C to 70°C (32°F to 158°F)

Minimum temperature at which valves will work at reduced performance

- -20°C (-4°F)

Storage temperature range

- -25°C to +85°C (-13°F to +185°F)

Supporting products:

- Auxiliary electronic modules (DIN-rail mounting):

Flow Characteristics (cont.)

KBD/TG4V-3
Spool types as noted

Looped flowpath at $\Delta p = 10$ bar (144 psi)

K3 valves are preset at the factory to compensate for the effect of spool overlap.
Frequency Response (Typical)

For an amplitude of ±25% max. stroke about the 50% position, at Δp (P-B) = 5 bar (75 psi)
Proportional Directional Valves without Feedback

Installation Dimensions in mm (inches)

**KBDG4V-3**

**Warning**
Valves with integral amplifiers are supplied with or without the metal 7-pin plug. The Vickers plug, part no. 934939, must be correctly fitted to ensure that the EMC rating and IP67 rating are achieved. The plug retaining nut must be tightened with a torque of 2-2.5 Nm (1.5-2.0 lbf ft) to effect a proper seal.

▲ Mounting surface seals supplied

† Note: Bleed screw locations. Air bleed: torque to 6.5-7.5 Nm (57-66 lbf ft).

**NOTE:** For optimum valve operation, bleed the air from the proportional solenoids at initial start-up. This may be done as follows:
- Remove the bleed screws until no bubbles appear and then reinstall bleed screws, or...
- Remove both bleed screws, and use a standard oil can nozzle to pump fluid in one side until it flows, free of air bubbles, out the other side. Reinstall screws. If there is no inherent back pressure in the tank port of the circuit, do not allow the tank line to empty. This may be prevented by installing a check valve in the tank line. The cracking pressure of the check valve should be in the range of 1.5-3 bar (22-45 psi).
Proportional Directional Valves without Feedback

Installation Dimensions in mm (inches)

Parallel Flow Path Module

Size 03 Parallel-Flow-Path Module
KDGM3-3616265-1*

Typically used for doubling effective flow capability of single solenoid proportional valves (throttle valves).

▲ A, T, and B ports at subplate face are blind holes fitted with O-seals.

Subplates and Mounting Surfaces

General Description
If a subplate is not used a machined pad must be provided for valve mounting. Pad must be flat within 0.0127 mm (.0005 inch) and smooth within 1.6 μm (63 microinch). Mounting bolts, when provided by customer, should be ISO 898 class 12.9 or better.

Dimensional Tolerances
Dimensional tolerance on interface drawings is ±0.2 mm (±0.008") except where otherwise stated. ISO 4401 specifies inch conversion to ±0.01".

Conversion from Metric
ISO 4401 gives dimensions in mm. Inch conversions are accurate to 0.01" unless otherwise stated.

Mounting Bolt Tappings
ISO 4401 gives metric thread tappings. Alternate UNC tappings are recommendations that allow these plates and associated valves to be used up to their maximum pressures, when using recommended Vickers™ bolt kits, or bolts of an equivalent strength. It is recommended that customers’ own manifold blocks for UNC bolts should be tapped to the minimum depths given in the notes.

Wiring

Connections must be made via the 7-pin plug mounted on the amplifier. See the leaflet and Installation Wiring Practices for Vickers® Electronic Products leaflet 2468. Recommended cable sizes are:

**Power cables:**
For 24V supply:
- 0.75 mm² (18 AWG) up to 20 m (65 ft)
- 1.00 mm² (16 AWG) up to 40 m (130 ft)

**Signal cables:**
- 0.50 mm² (20 AWG)

**Screen (shield):**
A suitable cable would have 7 cores, a separate screen for the signal wires and an overall screen. Cable outside diameter 8.0-10.5 mm (0.31-0.41 inches)

See connection diagram on next page.

⚠️ In valves with PH7 or PR7 type electrical connection.

⚠️ Warning
All power must be switched off before connecting or disconnecting any plugs.
Proportional Directional Valves without Feedback

Typical Connection Arrangements

Wiring Connections

Wiring Connections for Valves with “Enable” Feature

**Warning**
Electromagnetic Compatibility (EMC)
It is necessary to ensure that the valve is wired up as above. For effective protection the user electrical cabinet, the valve subplate or manifold and the cable screens should be connected to efficient ground points. The metal 7-pin connector part no. 934939 should be used for the integral amplifier.

In all cases both valve and cable should be kept as far away as possible from any sources of electromagnetic radiation such as cables carrying heavy current, relays and certain kinds of portable radio transmitters, etc. Difficult environments could mean that extra screening may be necessary to avoid the interference.

It is important to connect the 0V lines as shown above. The multi-core cable should have at least two screens to separate the demand signal and monitor output from the power lines.

The enable line to pin C should be outside the screen which contains the demand signal cables.
**Proportional Directional Valves without Feedback**

**Application Data**

**Fluid Cleanliness**

Proper fluid condition is essential for long and satisfactory life of hydraulic components and systems. Hydraulic fluid must have the correct balance of cleanliness, materials and additives for protection against wear of components, elevated viscosity and inclusion of air.

Recommendations on contamination control methods and the selection of products to control fluid condition are included in publication 9132 or 561, “Guide to Systemic Contamination Control”. The book also includes information on the concept of “ProActive Maintenance”. The following recommendations are based on ISO cleanliness levels at 2 µm, 5 µm and 15 µm.

For products in this catalog the recommended levels are:

- 0 to 70 bar (1000 psi) .................. 18/16/13
- 70 + bar (1000 + psi) ............... 17/15/12

Vickers* products, as any components, will operate with apparent satisfaction in fluids with higher cleanliness codes than those described. Other manufacturers will often recommend levels above those specified.

Experience has shown, however, that life of any hydraulic components is shortened in fluids with higher cleanliness codes than those listed above. These codes have been proven to provide a long trouble-free service life for the products shown, regardless of the manufacturer.

**Hydraulic Fluids**

Materials and seals used in these valves are compatible with antitrust hydraulic oils, and with non-alkyl-based phosphate esters.

The extreme operating viscosity range is 500 to 13 cSt (2270 to 70 SUS) but the recommended running range is 54 to 13 cSt (245 to 70 SUS).

**Installation**

The proportional valves in this catalog can be mounted in any attitude, but it may be necessary in certain demanding applications, to ensure that the solenoids are kept full of hydraulic fluid. Good installation practice dictates that the tank port and any drain port are piped so as to keep the valves full of fluid once the system start-up has been completed.

**Mounting Bolt Kits**

BK02-156493M (metric)
BK590716 (inch)

*If not using recommended Vickers® bolt kits, bolts used should be to ISO 898, 12.9 or better.*

**Seal Kit**

02-351111

**Plugs**

- 7-pin plug (metal) .................. 934939
- 7-pin plug (plastic) ............. 694534

(Metal plug must be used for full EMC protection)

**Note:** An alternative metal connector which gives EMC protection but not IP67 rating is available from ITT-Cannon, part number CA06-COM-E-14S-A7-P.

**Service Information**

The products from this range are preset at the factory for optimum performance; disassembling critical items would destroy these settings. It is recommended that if any mechanical or electronic repair is necessary, valves should be returned to the nearest Eaton Hydraulics repair center. The product will be refurbished as necessary and retested to specification before return.

Field repair is restricted to the replacement of the seals.
