General Description
Solenoid operated directional control valves are for directing and stopping flow at any point in a hydraulic system.

• Efficient control of greater hydraulic powers without increasing solenoid power consumption.
• Installed cost and space savings from higher power/weight-and-size ratios.
• Installation flexibility resulting from choice of numerous combinations of solenoid connectors and locations.

• Viton seals as standard for multi-fluid capability. Nitrile seals available as a model code option.
• Higher sustained machine productivity and higher uptime because of proven fatigue life and endurance, tested over 20 million cycles.
• Solenoid coils can be changed quickly and easily without leakage from hydraulic system.
• Compact, cost effective system design when used with Eaton® SystemStak™ valves and subplates.

DG4V3-S/R- High Performance and Standard Performance Valves
• Minimum pressure drop 2.5 bar at 30 l/min.
• Range of coil connectors including DIN, Deutsch, AMP and terminal box.
• Range of coil voltages and power options.
• Up to 80 l/min (21 USgpm) and up to 40 l/min (10.5 USgpm) respectively at 350 bar (5000 psi).
• Offers designers the opportunity to select the optimum value package for each application.

• International standard interface. The valve mounting face conforms to ISO 4401, size 03 and is compatible with related international standards.
DG4V-3 Model Series

1. Seal Type
   - Blank – Viton
   - F6 – Buna Nitrile/High CAN

2. Model series
   - 4 – Solenoid operated
   - V – Pressure rating 350 bar (5000 psi) on P, A & B ports
   - 3 – ISO 4401 Size 03

3. Performance
   - Blank – High performance
   - S – Standard performance
   - R – Standard performance with 8 Watt coil

4. Spool Type
   - Please refer functional symbols on Page 5 for spool types.

5. Spool Spring Arrangement
   - A – Spring offset, end-to-end
   - AL – Same as “A” but left hand build
   - B – Spring offset, end to center
   - BL – Same as “B” but left hand build
   - C – Spring centered
   - N – No-spring detented

6. Manual Override Option
   - Blank – Plain override(s) in solenoid end(s) only
   - H – Water-resistant override(s) on solenoid end(s)
   - Z – No overrides at either end
   - W – Twist and lock override in solenoid end(s)

7. Solenoid Energization Identity
   - Blank – None
   - V – Solenoid “A” is at port “A” end and/or solenoid “B” is at port “B” end, independent of spool type

8. Flag Symbol
   - M – Electrical options and features

9. Spool Indicator Switch
   - S7 – Spool position monitoring switch. Single solenoid valves only.
   - NOTE: Refer Page B-6 and B-10 for further details

10. Coil Type
    - U – ISO 4400, DIN 43650 connector
    - U1 – ISO 4400 fitted with PG11 plug
    - U6 – ISO 4400 with fitted DIN plug with lights
    - KU – Top exit flying lead (150mm)
    - KUP4 – Junior timer (Amp) connector
    - KUP5 – Integral Deutsch connector
    - KUPM4L – Integral M12, 4-Pin connector
    - FW – Flying lead with 1/2” NPT thread wiring housing
    - FTW – Fly. lead wired terminal block & 1/2” NPT thread wiring housing
    - FPA3W – Fly. lead, 3 Pin connector & 1/2” NPT thread wiring housing
    - FPA5W – Fly. lead, 5 pin connector & 1/2” NPT thread wiring housing
    - X5 – Atex approved coil, ’d’ type

11. Solenoid Indicator Lights
    - Blank – None
    - L – Solenoid indicator lights

12. Coil Type
    - X5 coil type only

13. Tank Pressure Rating
    - Refer to “Operating Data” for port T pressure ratings.

14. Orifice Plug
    - 00 – No orifice required
    - 03 – 0.3 mm dia.
    - 06 – 0.6 mm dia.
    - 08 – 0.8 mm dia.
    - 09 – 0.9 mm dia.
    - 10 – 1.0 mm dia.
    - 13 – 1.3 mm dia.
    - 15 – 1.5 mm dia.
    - 20 – 2.0 mm dia.
    - 23 – 2.3 mm dia.

15. Special Features
    - “EN***” code number assigned as required.

For applications where valves are to remain pressurized (either energized or de-energized) at pressures over 210 bar (3045 psi) without frequent switching, it is recommended to use the high performance model, DG4V-3.

1st half cycle; armature fully retracted.

This product has been designed and tested to meet specific standards outlined in the European Electromagnetic Compatibility Directive (EMC) 2004/108/EC. For instructions on installation requirements to achieve effective protection levels see this leaflet and the Installation Wiring Practices for Vickers Electronic Products leaflet 2468. Wiring practices relevant to this Directive are indicated by ▲ Electromagnetic Compatibility (EMC).

Pin number 2, “normally closed”

MI2 4 PIN CONNECTOR DETAILS
Customer’s protective ground connection

WARNING: Electromagnetic Compatibility (EMC)
It is necessary to ensure that the unit is wired up in accordance with the connection arrangements shown above. For effective protection the user’s electrical cabinet, the valve subplate or manifold and the cable screens should be connected to efficient ground points.
In all cases both valve and cable should be kept as far away as possible from any sources of electromagnetic radiation such as cables carrying heavy current, relays and certain kinds of portable radio transmitters, etc. Difficult environments could mean that extra screening may be necessary to avoid the interference.

Terminal strip and lights
For valves with type “F” coils.

1. For DC coils the +ve lead(s) must be connected to the terminal(s) marked +. When using 3-wire incoming leads to double solenoid valves (i.e. common neutral) the inner pair of terminals must be interconnected.

2. For correct light indication of energized solenoid ensure that solenoid leads are correctly connected: light terminals are common with each outer pair of solenoid terminals according to the side with + mark.

Insta-Plug
DG4V-3(S)—FPA—60
DG4V-3(S)—FPBW—60
Eaton 2-part “Insta-Plug” eliminates breaking electrical inputs for valve disconnect. A male half is pre-wired to the valve body. The mating plug is inside a wire housing with external terminals for machine wire connections. Captive thumb screws, when loosened, permit the wire housing to be pulled clear of the valve for disconnect. A longer ground post provides first make/last break ground connection.

PA configuration

Dimensions in mm(in).
**Electrical Plugs and Connectors**

**NFPA Connector T3.5.29-1980**

DG4V-3(S)–**FPA3W(L)**–**-60**

DG4V-3(S)–**FPA5W(L)**–**-60**

The receptacle is a standard three or five pole connector with shortened leads and terminals added. The five pole plug has four leads 101.6 (4.0) long and one 177.8 (7.0) long. The three pole has two leads 101.6 (4.0) long and one 177.8 (7.0). All wires have underwriters recognized non-solder insulated eyelet terminals. The green wire is used for the ground (earth) connection (No. 8 screw furnished). Valves are supplied pre-wired.

Connection details and model type/model code references

![Connection Diagram](image)

- **Warning tag:** "Electrical power must be disconnected before removing or replacing electrical plug."

**Surge Suppression Devices (For DC Valves)**

**Standard diode (D1), (D2)**

Diode in parallel with coil, positive bias. When switch (S1) is opened, the energy stored in the coil is trapped and dissipated by the diode (D1), (D2).

- Works only with DC voltage
- Polarity dependent
- Increase drop out time

**Surge Suppression Devices (For DC Valves)**

**Standard diode (D2)**

Diode in parallel with coil, negative bias. When switch (S1) is opened, the energy stored in the coil is trapped and dissipated by the diode (D2).

- Works only with DC voltage
- Polarity dependent
- Increase drop out time

**Transzorb (D7)**

Diode and Zener diode in parallel with coil. When switch (S1) is opened, the energy stored in the coil is trapped and dissipated by the diode (D1) and Zener diode (Z1) and the coil resistance.

- The Zener makes exact limitation of inductive spikes.
- Works only with DC voltage
- Polarity dependent

**NOTE:** These surge suppression devices are “Polarity Dependent.” Proper biasing conditions must be met when installing/connecting a coil in a system. Times represent cessation/application of voltage to coil versus velocity (start/stop) of a cylinder using a single solenoid, spring offset valve (time in milliseconds).

**Valve Shift and Dropout**

**3 pin connector**

Use with single solenoid valve

Key model code designations:

DG4V-3(S)-**A(L)**-**-(V)M-**FPA3W(L)

DG4V-3(S)-**B(L)**-**-(V)M-**FPA5W(L)

- 1 – green lead (ground)
- 3 – lead to solenoid
- 25.4 (1.00) hex (reference all types)
- 2 – lead to solenoid

**5 pin connector**

Use with single solenoid valve

Key model code designations:

DG4V-3(S)-**A(L)**-**-(V)M-**FPA3W(L)

DG4V-3(S)-**B(L)**-**-(V)M-**FPA5W(L)

- 1 – lead to solenoid
- 5 – lead to solenoid
- 4 – lead capped
- 3 – green lead (ground)
- 2 – lead capped
